*Geosynthetics* David I. Cook, 2003 Geosynthetics often play critical roles in civil engineering and it is important that the materials in use can withstand the physical and chemical pressures of the environment These range from resistance to leachates from landfill to resistance to root damage in soil liners as well as standard properties such as resistance to creep oxidation and UV light and tensile strength This Rapra Review Report discusses the polymers used in each category of geosynthetics production methods test methods and applications The review is accompanied by around 400 abstracts from papers and books in the Rapra Polymer Library database to facilitate further reading on this subject

*Developments in Thermoplastic Elastomers* K. E. Kear, 2003 Thermoplastic elastomers TPEs have the elastic behaviour of rubber and the processability of thermoplastics The Freedonia Group has forecast that demand will expand by 6.4% per year to around 2.15 million tons in 2006 There is potential for these new exciting materials to expand into the much larger thermoset rubber markets This review includes comparisons between the two material types There are three major types of TPE block copolymers rubber plastic blends and dynamically vulcanised rubber plastic alloys known as thermoplastic vulcanisates The chemistry of these materials and how

**Biocides in Plastics** D. Nichols, 2004 This Rapra Review Report examines the use of biocides in plastics with reference to material types and application requirements The commonly available biocides are reviewed and details of their strengths and weaknesses are provided The author reviews the frequently used test methods for fungi and bacteria and in an ever changing regulatory environment explores the influence of legislation on the current and future use of such biocides This detailed and state of the art review is supported by an indexed section containing several hundred key references and abstracts selected from the Polymer Library database

*Regulation of Food Packaging in Europe and the USA* Derek J Knight, Lesley A Creighton, 2004 Annotation A wide variety of plastics are used in food contact applications and it is important that such plastics do not affect the food with which they come into contact The objective of food packaging legislation is to protect the consumer by controlling the contamination of food by chemicals transferred from the packaging Food packaging regulations are constantly under revision and differ significantly between Europe and the USA This report provides a clearly written summary of the current legislation surrounding the use of plastics in contact with food It discusses the plastics used in food packaging their characteristics and applications This review is accompanied by around 400 abstracts from papers and books in the Rapra Polymer Library database
