Nakajima, 2014-01-15     **Generative and Transformational Techniques in Software Engineering** Ralf Lämmel, João Saraiva, Joost Visser, 2006-09-29 This tutorial book presents an augmented selection of material presented at the International Summer School on Generative and Transformational Techniques in Software Engineering GTTSE 2005 The book comprises 7 tutorial lectures presented together with 8 technology presentations and 6 contributions to the participants workshop The tutorials combine foundations methods examples and tool support Subjects covered include feature oriented programming and the AHEAD tool suite program transformation with reflection and aspect oriented programming and more     *ICDT'86* Giorgio Ausiello, Paolo Atzeni, 1986-12     VLSI Algorithms and Architectures Fillia Makedon, Kurt Mehlhorn, T. Papatheodorou, P. Spirakis, 1986-06 Introduction to the temporal logic of in particular parallel programs Divided into three main parts Presentation of the pure temporal logic language semantics and proof theory Representation of programs and their properties within the language of temporal logic Application of the logical apparatus to the verification of program properties including a new embedding of Hoare's logic into the temporal framework     **Machine Intelligence 15** Koichi Furukawa, Kōichi Furukawa, Donald Michie, Stephen Muggleton, 1999 Following on from previous volumes in the series Machine Intelligence 15 provides an overview of current areas of interest in artificial intelligence     *Computer and Information Sciences II* Erol Gelenbe, Ricardo Lent, Georgia Sakellari, 2011-09-30 Information technology is the enabling foundation for all of human activity at the beginning of the 21st century and advances in this area are crucial to all of us These advances are taking place all over the world and can only be followed and perceived when researchers from all over the world assemble and exchange their ideas in conferences such as the one presented in this proceedings volume regarding the 26th International Symposium on Computer and Information Systems held at the Royal Society in London on 26th to 28th September 2011 Computer and Information Sciences II contains novel advances in the state of the art covering applied research in electrical and computer engineering and computer science across the broad area of information technology It provides access to the main innovative activities in research across the world and points to the results obtained recently by some of the most active teams in both Europe and Asia     **Computing and Combinatorics** Lusheng Wang, 2005-09-07 The papers in this volume were presented at the Eleventh Annual International Computing and Combinatorics Conference COCOON 2005 held August 16-19 2005 in Kunming China     **Algorithmic Learning Theory** Shai Ben David, John Case, Akira Maruoka, 2004-09-24 Algorithmic learning theory is mathematics about computer programs which learn from experience This involves considerable interaction between

various mathematical disciplines including theory of computation statistics and combinatorics There is also considerable interaction with the practical empirical fields of machine and statistical learning in which a principal aim is to predict from past data about phenomena useful features of future data from the same phenomena The papers in this volume cover a broad range of topics of current research in the field of algorithmic learning theory We have divided the 29 technical contributed papers in this volume into eight categories corresponding to eight sessions reflecting this broad range The categories featured are Inductive Inference Approximate Optimization Algorithms Online Sequence Prediction Statistical Analysis of Unlabeled Data PAC Learning Boosting Statistical supervised Learning LogicBased Learning and Query Reinforcement Learning Below we give a brief overview of the field placing each of these topics in the general context of the field Formal models of automated learning reflect various facets of the wide range of activities that can be viewed as learning A first dichotomy is between viewing learning as an indefinite process and viewing it as a finite activity with a defined termination Inductive Inference models focus on indefinite learning processes requiring only eventual success of the learner to converge to a satisfactory conclusion

*Perspectives of Systems Informatics* Edmund Clarke, Irina Virbitskaite, Andrei Voronkov, 2012-05-13 This book contains thoroughly refereed and revised papers from the 8th International Andrei Ershov Memorial Conference on Perspectives of System Informatics PSI 2011 held in Akademgorodok Novosibirsk Russia in June July 2011 The 18 revised full papers and 10 revised short papers presented were carefully reviewed and selected from 60 submissions The volume also contains 5 invited papers covering a range of hot topics in computer science and informatics The papers are organized in topical sections on foundations of program and system development and analysis partial evaluation mixed computation abstract interpretation compiler construction computer models and algorithms for bioinformatics programming methodology and software engineering information technologies knowledge based systems and knowledge engineering

**On the Ambiguity of Erasing Morphisms** Johannes C. Schneider, 2012 This book discusses a very basic and fundamental phenomenon in combinatorics on words namely the ambiguity of morphisms A morphism  $h$  is called ambiguous for a word  $w$  provided that there is another morphism  $g$  which satisfies  $g(w) = h(w)$  If such another morphism does not exist  $h$  is called unambiguous for  $w$  Furthermore there are different types of restricted ambiguity which make additional demands on the other morphism  $g$  The examination of the ambiguity of morphisms is not only of intrinsic interest but due to the simplicity of the concept also shows various connections to other topics in theoretical computer science and discrete mathematics pattern languages and various other concepts as fixed points of morphisms avoidable patterns and word equations This book is the first comprehensive study of the ambiguity of erasing morphisms i.e. morphisms that are allowed to map symbols in the word to the empty word

**Applied Algebra, Algorithmics and Error-Correcting Codes** Alain Poli, 1986-07 Acceleration of Biomedical Image Processing with Dataflow on FPGAs Frederik Gr  ll, Udo

Kebschull, 2016-06-30 Short compute times are crucial for timely diagnostics in biomedical applications but lead to a high

demand in computing for new and improved imaging techniques In this book reconfigurable computing with FPGAs is discussed as an alternative to multi core processing and graphics card accelerators Instead of adjusting the application to the hardware FPGAs allow the hardware to also be adjusted to the problem Acceleration of Biomedical Image Processing with Dataflow on FPGAs covers the transformation of image processing algorithms towards a system of deep pipelines that can be executed with very high parallelism The transformation process is discussed from initial design decisions to working implementations Two example applications from stochastic localization microscopy and electron tomography illustrate the approach further Topics discussed in the book include Reconfigurable hardware Dataflow computing Image processing Application acceleration     *Algebraic Algorithms and Error-Correcting Codes* Jaques Calmet, 1986-07

*Structure in Complexity Theory* Alan L. Selman, 1986-05     *Project Factorisations in Partial Evaluation* John Launchbury, 1991-10-24 This thesis covers the theory and practice behind practical evaluation It explores how programmers write programs in a highly interpretive style without paying the price in efficiency     **Advances in Knowledge Discovery and Data Mining** Wee Keong Ng, Masaru Kitsuregawa, Jianzhong Li, 2006-03-10 This book constitutes the refereed proceedings of the 10th Pacific Asia Conference on Knowledge Discovery and Data Mining PAKDD 2006 held in Singapore in April 2006 The 67 revised full papers and 33 revised short papers presented together with 3 invited talks were carefully reviewed and selected from 501 submissions The papers are organized in topical sections on Classification Ensemble Learning Clustering Support Vector Machines Text and Document Mining Web Mining Bio Data Mining and more
