Risques Et Catastrophes Observer Spatialiser Comprendre Gerer:

Risques et catastrophes André Dauphiné, Damienne Provitolo, 2013-08-07 Les termes risque et catastrophe d signent une potentialité et une réalité qui ne se recouvrent pas Le risque persistant et tendu dans l'espace se différencie de la catastrophe souvent brève et de formes irrégulières Cet ouvrage entièrement revu vient faire le point sur ces notions complexes La première partie Observer insiste sur les concepts et les nouvelles approches Elle présente la résilience comme un nouveau mode de gestion des risques et efface les distinctions qui séparent le domaine physique du champ social Elle est également consacrée aux représentations et perceptions des risques et catastrophes Dans la deuxième partie Spatialiser les risques et les catastrophes sont examinés différentes échelles celles des zones et des aires de civilisation des milieux littoraux et montagnards et plus encore des villes La troisième partie Comprendre propose des analyses comparatives variées qui permettent de rapprocher des risques perçus comme différents Puis les nouvelles théories générales de la complexité sont invoquées pour comprendre des catastrophes aussi différentes que les séismes les pandémies ou les violences urbaines Ces comparaisons sont enfin privilégiées dans la quatrième partie Gérer qui analyse les politiques de gestion lors des phases de prévention de secours puis de reconstruction en intégrant les mesures les plus récentes au niveau français et européen En conclusion des actions sont proposées pour améliorer le dispositif de lutte contre les catastrophes en France

Territorial Crisis Management Richard Laganier, Yvette Veyret, 2022-09-14 Our societies have become very crisis prone This book explores crises and the methods of anticipation management and reconstruction and considers a risk crisis territorial development continuum The aim is to better understand a widely used concept and clarify the methods of action in the field of crisis management The different forms of learning proposed to better face future crises are also questioned This book invites us to analyze the resources available to support crisis management and reconstruction and consider the unequal access to these resources in different territories in order to design future territorial strategies This often results in a form of territorial inertia after the crises However some innovators imagine renewed territories prepare for reconstruction or even recompose territories now in order to make them more resilient The crisis can then be the driving force or the accelerator of these changes and contribute to the emergence of new practices or even new urban and territorial utopias *Landslides: Evaluation and Stabilization/Glisement de Terrain: Evaluation et Stabilisation, Set of 2 Volumes* W. Lacerda, Mauricio Ehrlich, S.A.B. Fontoura, A.S.F. Sayao, 2004-06-15 These volumes comprise the Proceedings of the Ninth International Symposium on Landslides held in Rio de Janeiro Brazil from June 28 to July 2 2004 Information on the latest developments in Landslide Studies is presented by invited lecture reports specialized panel contributions and over two hundred and forty technical papers grouped in the following themes Mapping and geological models in landslide hazard assessment Advances in rock and mine slopes design Field instrumentation and laboratory investigations Pre failure mechanics of landslides in soil and rock Mechanisms of slow active landslides Post failure mechanics of landslides Stabilization methods and risk reduction

Computational Science and its Applications A. H. Siddiqi, R. C. Singh, G. D. Veerappa Gowda, 2020-10-21 Computational science is a rapidly growing multidisciplinary field concerned with the design implementation and use of mathematical models to analyze and solve real world problems It is an area of science that spans many disciplines and which involves the development of models and allows the use of computers to perform simulations or

numerical analysis to understand problems that are computational and theoretical Computational Science and its Applications provides an opportunity for readers to develop abilities to pose and solve problems that combine insights from one or more disciplines from the natural sciences with mathematical tools and computational skills This requires a unique combination of applied and theoretical knowledge and skills The topics covered in this edited book are applications of wavelet and fractals modeling by partial differential equations on flat structure as well as on graphs and networks computational linguistics prediction of natural calamities and diseases like epilepsy seizure heart attack stroke biometrics modeling through inverse problems interdisciplinary topics of physics mathematics and medical science and modeling of terrorist attacks and human behavior The focus of this book is not to educate computer specialists but to provide readers with a solid understanding of basic science as well as an integrated knowledge on how to use essential methods from computational science Features Modeling of complex systems Cognitive computing systems for real world problems Presentation of inverse problems in medical science and their numerical solutions Challenging research problems in many areas of computational science This book could be used as a reference book for researchers working in theoretical research as well as those who are doing modeling and simulation in such disciplines as physics biology geoscience and mathematics and those who have a background in computational science

From System Complexity to Emergent Properties

Moulay Aziz-Alaoui, Cyrille Bertelle, 2009-08-07 Emergence and complexity refer to the appearance of higher level properties and behaviours of a system that obviously comes from the collective dynamics of that system's components These properties are not directly deducible from the lower level motion of that system Emergent properties are properties of the whole that are not possessed by any of the individual parts making up that whole Such phenomena exist in various domains and can be described using complexity concepts and thematic knowledges This book highlights complexity modelling through dynamical or behavioral systems The pluridisciplinary purposes developed along the chapters are able to design links between a wide range of fundamental and applicative Sciences Developing such links instead of focusing on specific and narrow researches is characteristic of the Science of Complexity that we try to promote by this contribution

How Information Systems Can Help in Alarm/Alert Detection Florence Sedes, 2018-11-12 Alarm or alert detection remains an issue in various areas from nature i.e flooding animals or earthquake to software systems Liveness dynamicity reactivity of alarm systems how to ensure the warning information reach the right destination at the right moment and in the right location still being relevant for the recipient in spite of the various and successive filters of confidentiality privacy firewall policies etc Also relevant in this context are technical contingency issues material failure defect of connection break of channels independence of information routes and sources Alarms with crowd media mis information vs rumours how to make the distinction The prediction of natural disasters floods avalanches etc health surveillance affectionate fevers of cattle pollution by pesticides etc air sea and land transport or space surveillance to prevent Risks of collisions between orbital objects involve more and

more actors within Information Systems one of whose purposes is the dissemination of alerts By expanding the capabilities and functionality of such national or international systems social networks are playing a growing role in dissemination and sharing eg with the support of systems like the Google Alert <https://www.google.fr/alerts> which concerns the publication of contents online Recently the Twitter microblogging platform announced a broadcast service designed to help government organizations with alerts to the public The proper functioning of such systems depends on fundamental properties such as resilience liveliness and responsiveness any alert must absolutely reach the right recipient at the right time and in the right place while remaining relevant to him despite the various constraints on the one hand to external events such as hardware failures connection faults breaks in communication channels on the other hand to confidentiality such as the collection and use of personal data with or without the consent of the user or the disparity of access policies generation according to industrial technological security constraints management of internal external policies etc between actors This book opens the discussion on the procrastination the dynamics and the reactivity of the alert systems but also the problems of confidentiality filtering of information and the means of distinguishing information and rumor Presents alarm or alert detection in all its aspects Finds a solution so that the alert information reaches the right destination Find relevance to various technical issues

Spatio-temporal Approaches Hélène Mathian,Lena Sanders,2014-12-03 Spatio temporal Approaches presents a well built set of concepts methods and approaches in order to represent and understand the

evolution of social and environmental phenomena within the space It is based on examples in human geography and archeology which will enable us to explore questions regarding various temporalities and tackle social and environmental phenomena Chapter 1 discusses how to apprehend change objects attributes relations processes Chapter 2 introduces multiple points of view about modeling and the authors try to shed a new light on the different but complementary approaches of geomaticians and thematicians Chapter 3 is devoted to the construction of spatio temporal indicators to various measurements of the change while highlighting the advantage of an approach crossing several points of view in order to understand the phenomenon at hand Chapter 4 presents different categories of simulation model in line with complexity sciences These models rely notably on the concepts of emergence and self organization and allow us to highlight the roles of interaction within change Chapter 5 provides ideas on research concerning the various construction approaches of hybrid objects and model couplings

Floods Freddy Vinet, 2017-09-27 In the past thirty years knowledge on flooding has greatly increased by moving away from purely hydrological and hydraulic science and opening up to other disciplines such as economics or human and geographical sciences It is as part of this multidisciplinary approach that this book proposes a review of current knowledge on flood risk It starts with the ever increasing impact of flooding in order to conceptualize and understand the constituents of risk Although risk knowledge in modeling methods or naturalist approaches remains essential it is further developed by the fields of economics human sciences geography environmental psychology and history This integrated approach to flood risk contextualizes current conclusions on the eventual effects of climate change by showing that human factors are of paramount importance in understanding the process of risk production The book sets a state of art around the flood issue from the description of the phenomena to the management of risk dikes dams reducing vulnerability management of crisis The chapters are written by specialists but are accessible to the mainstream scientist Each chapter exposes knowledge methodologies scientific locks and the prospects of each discipline on the theme of floods

The Land/Ocean Interactions in the Coastal Zone of West and Central Africa Salif Diop, Jean-Paul Barusseau, Cyr Descamps, 2014-06-02 Although the main focus of this book is on the estuaries its scope goes well beyond this particular coastal feature Indeed the estuary can only be considered as part of the life cycle of the entire river and the marine area it feeds into an area particularly subject to human and natural pressures The main estuaries and deltas of West and Central Africa region provide a variety of goods and services to its coastal population The most important of them are related to critical fish habitat wood and charcoal from mangroves as well as space for agriculture aquaculture urban development tourism and transport Particular emphasis has been made in this book on mangroves that play a significant role in terms of flood control groundwater replenishment coastline stabilization and protection against storms They also retain sediments and nutrients purify water and provide critical carbon storage Such hydrological and ecological functions explain the focus on serving mangrove ecosystems and the nearby communities which draw significant income from fishing rice production

tourism salt extraction and other activities such as harvesting honey and medicinal plants hence the need for preserving mangrove ecosystems to ensure sustainability of the estuaries and deltas of West and Central Africa region The book has a foreword by Mr Achim Steiner United Nations Under Secretary General and Executive Director of UNEP who is stating that credible and up to date information is essential for the public at large but more specifically for scientists researchers managers decision makers all working together in order to safeguard protect and sustainably manage estuaries deltas and lagoons and the coastal and ocean waters of Western and Central Africa
