Shamans, Software, and Spleens James Boyle,1997 **Communications: The Information Society** , Key Thinkers for the Information Society Christopher May,2003 Key Thinkers for the Information Society provides an introduction to some important social theorists whose work has considerable relevance to today s brave new world of information and communication technologies With the aim of widening current perspectives on the information society each contributor introduces a particular theorist and discusses the way in which their insights can be reintroduced into debates regarding the social political and cultural impact of ICTs Theorists presented in Volume 1 include some well known and some less well known figures Walter Benjamin Murray Edelman Jacques Ellul Harold Innes Lewis Mumford Karl Polanyi Eric Elmer Scattachneider and Raymond Williams Each has something fresh and pertinent to say and taken as a whole this volume provides an exciting new resource for contemporary studies *Law and Society Approaches to Cyberspace* Paul Schiff Berman,2017-11-28 During the past decade the rise of online communication has proven to be particularly fertile ground for academic exploration at the intersection of law and society Scholars have considered how best to apply existing law to new technological problems but they also have returned to first principles considering fundamental questions about what law is how it is formed and its relation to cultural and technological change This collection brings together many of these seminal works which variously seek to interrogate assumptions about the nature of communication knowledge invention information sovereignty identity and community From the use of metaphor in legal opinions about the internet to the challenges posed by globalization and deterritorialization to the potential utility of online governance models to debates about copyright free expression and privacy this collection offers an invaluable introduction to cutting edge ideas about law and society in an online era In addition the introductory essay both situates this work within the trajectory of law and society scholarship and summarizes the major fault lines in ongoing policy debates about the regulation of online activity

Cultural Studies Lawrence Grossberg,2020-11-25 This book leading and shaping the field of cultural studies in Australia fosters a conversation about the changing and competing discursive and material conditions struggles and possibilities of the contemporary world in all their complexities and diversities Our Biometric Future Kelly Gates,2011-01-23 Since the 1960s a significant effort has been underway to program computers to see the human face to develop automated systems for identifying faces and distinguishing them from one another commonly known as Facial Recognition Technology While computer scientists are developing FRT in order to design more intelligent and interactive machines businesses and states agencies view the technology as uniquely suited for smart surveillance systems that automate the labor of monitoring in order to increase their efficacy and spread their reach Tracking this technological

pursuit Our Biometric Future identifies FRT as a prime example of the failed technocratic approach to governance where new technologies are pursued as shortsighted solutions to complex social problems Culling news stories press releases policy statements PR kits and other materials Kelly Gates provides evidence that instead of providing more security for more people the pursuit of FRT is being driven by the priorities of corporations law enforcement and state security agencies all convinced of the technology s necessity and unhindered by its complicated and potentially destructive social consequences By focusing on the politics of developing and deploying these technologies Our Biometric Future argues not for the inevitability of a particular technological future but for its profound contingency and contestability *Scientific Authorship* Mario Biagioli, Peter Galison, 2014-01-27 Since the seventeenth century our ideas of scientific authorship have expanded and changed dramatically In this ambitious volume of new work Mario Biagioli and Peter Galison have brought together historians of science literary historians and historians of the book Together they track the changing nature and identity of the author in science both historically and conceptually from the emergence of scientific academies in the age of Galileo to concerns with large scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants How for example do we decide whether a chemical compound is discovered or invented What does it mean to patent genetic material Documenting the emergence of authorship in the late medieval period authorship s limits and its fragmentation *Scientific Authorship* offers a collective history of a complex relationship *Framing Piracy* Shujen Wang, 2003 *Framing Piracy* examines film distribution legal and illegal in the largest mostly untapped market in the world Greater China Tracing networks of optical disc VCD DVD and online piracy this book tackles issues of politics globalization and technology It features a wealth of original research new distribution data and interviews with film distributors government officials and film pirates With changes afoot in China upon its entering the World Trade Organization this timely book shows that such transformations have far reaching implications for policy theory and practice **Reclaiming Fair Use** Patricia Aufderheide, Peter Jaszi, 2018-04-27 In the increasingly complex and combative arena of copyright in the digital age record companies sue college students over peer to peer music sharing YouTube removes home movies because of a song playing in the background and filmmakers are denied a distribution deal when a permissions i proves undottable Analyzing the dampening effect that copyright law can have on scholarship and creativity Patricia Aufderheide and Peter Jaszi urge us to embrace in response a principle embedded in copyright law itself fair use Originally published in 2011 *Reclaiming Fair Use* challenged the widely held notion that copyright law is obsolete in an age of digital technologies Beginning with a survey of the contemporary landscape of copyright law Aufderheide and Jaszi drew on their years of experience advising documentary filmmakers English teachers performing arts scholars and other creative professionals to lay out in detail how the principles of fair use can be employed to avoid copyright violation Taking stock of the vibrant remix culture that has only burgeoned since the book s original publication this new edition addresses the expanded reach of fair

use tracking the Twitter hashtag WTFU where s the fair use the maturing of the transformativeness measure in legal disputes the ongoing fight against automatic detection software and the progress and delays of digitization initiatives around the country Full of no nonsense advice and practical examples Reclaiming Fair Use remains essential reading for anyone interested in law creativity and the ever broadening realm of new media *Public Rights* Graham Greenleaf,David Lindsay,2018-06-21 Access to works in the public domain is an important source of human creativity and autonomy whether in the arts scientific research or online discourse But what can users actually do with works without obtaining the permission of a copyright owner Readers will be surprised to find how many different kinds of permitted usage exist around the world This book offers a comprehensive international and comparative account of the copyright public domain It identifies fifteen categories of public rights and gives a detailed legal explanation of each showing how their implementation differs between jurisdictions Through this analysis the authors aim to restore balance to copyright policy debates and to contribute to such debates by making practical law reform proposals A major intervention in the field of intellectual property law and copyright this book will appeal to lawyers scholars and those involved in the administration of copyright law **The Commons, Plant Breeding and Agricultural Research** Fabien Girard,Christine Frison,2018-03-09 The joint challenges of population increase food security and conservation of agrobiodiversity demand a rethink of plant breeding and agricultural research from a different perspective While more food is undeniably needed the key question is rather about how to produce it in a way that sustains biological diversity and mitigates climate change This book shows how social sciences and more especially law can contribute towards reconfiguring current legal frameworks in order to achieving a better balance between the necessary requirements of agricultural innovation and the need for protection of agrobiodiversity On the assumption that the concept of property can be rethought against the background of the right to include so as to endow others with a common right to access genetic resources several international instruments and contractual arrangements drawn from the plant breeding field including the Convention on Biological Diversity technology exchange clearing houses and open sources licenses receive special consideration In addition the authors explore the tension between ownership and the free circulation and exchange of germplasm and issues such as genetic resources managed by local and indigenous communities the ITPGRFA and participatory plant breeding programmes As a whole the book demonstrates the relevance of the Commons for plant breeding and agricultural innovation Rethinking Society for the 21st Century: Volume 2, Political Regulation, Governance, and Societal Transformations International Panel on Social Progress (IPSP),2018-07-19 This is the second of three volumes containing a report from the International Panel on Social Progress IPSP The IPSP is an independent association of top research scholars with the goal of assessing methods for improving the main institutions of modern societies Written in accessible language by scholars across the social sciences and humanities these volumes assess the achievements of world societies in past centuries the current trends the dangers that we are now facing and the possible
