ABSTRACT

Digital learning technologies have increasingly emerged as critical tools in informing education policy, particularly in fostering equity in education for countries with underresourced regions. This study explores how national education policies are influenced in integrating technology as a catalyst in bridging the educational divide and improving access to quality learning in an equitable manner. The quantitative survey method was used whereby the study covered 1,200 policymakers and educators from 15 countries in the Global South. Participants were selected based on involvement in the development of education policy or the implementation of digital learning in their communities. Responses were obtained through a structured questionnaire with respect to their perceptions about the implications of technology-driven policies for educational equity. Results indicated that 85% of the participants perceive that, with the advent of digital learning platforms, the access to education in distant and rural areas has increased phenomenally. Further, 78% of the participants believed that digital tools have helped in reducing the gap in educational outcomes between an urban and rural setup. In countries with strong policies related to digital education, a resultant increase of 25% in enrollment was observed in marginalized groups within two years of the adoption of that policy. Seventy percent of the respondents also claimed that digital education has revolutionized learning outcomes, allowing students with disabilities to be included more within mainstream education systems. The study concluded by establishing that technology plays an important role in shaping the equitable national policies of education. It is recommended that policymakers should focus on strengthening the infrastructure of digitals, training teachers, and providing resources to ensure inclusive education for all. Future research should now investigate the impact of digital learning policies on educational equity in the long term, and their potential for scalability across different national contexts.

Seth, 2002-09-30 In the half century after 1945 South Korea went from an impoverished largely rural nation ruled by a succession of authoritarian regimes to a prosperous democratic industrial society No less impressive was the country's transformation from a nation where a majority of the population had no formal education to one with some of the world's highest rates of literacy high school graduates and university students Drawing on their premodern and colonial heritages as well as American education

concepts South Koreans have been largely successful in creating a schooling system that is comprehensive uniform in standard and universal The key to understanding this educational transformation is South Korean society s striking nearly universal preoccupation with schooling what Korean's themselves call their education fever This volume explains how Koreans concern for achieving as much formal education as possible appeared immediately before 1945 and quickly embraced every sector of society Through interviews with teachers officials parents and students and an examination of a wide range of written materials in both Korean and English Michael Seth explores the reasons for this social demand for education and how it has shaped nearly every aspect of South Korean society He also looks at the many problems of the Korean educational system the focus on entrance examinations which has tended to reduce education to test preparation the overheated competition to enter prestige schools the enormous financial burden placed on families for costly private tutoring the inflexibility created by an emphasis on uniformity of standards and the misuse of education by successive governments for political purposes Handbook of Critical Race Theory in Education Marvin Lynn, Adrienne D. Dixson, 2021-10-25 This handbook illustrates how education scholars employ Critical Race Theory CRT as a framework to bring attention to issues of race and racism in education It is the first authoritative reference work to provide a truly comprehensive description and analysis of the topic from the defining conceptual principles of CRT in Law that gave shape to its radical underpinnings to the political and social implications of the field today It is divided into six sections covering innovations in educational research policy and practice in both schools and in higher education and the increasing interdisciplinary nature of critical race research New chapters broaden the scope of theoretical lenses to include LatCrit AsianCrit and Critical Race Feminism as well as coverage of Discrit Studies Research Methods and other recent updates to the field This handbook remains the definitive statement on the state of critical race theory in education and on its possibilities for the future

changes in universities themselves Today universities are very diverse institutions they no longer have a sense of essential purpose and have largely accepted their loss of autonomy especially in education where government intervention is particularly strong If education is now fully integrated into universities then like the system as a whole it urgently needs to find a voice set out a vision for itself and state what its purpose should be within a university in the modern world The book therefore brings together four vitally important topics the changing nature of the university the academic and scholarly study of education as a field the professional education and training of teachers the nature and organisation of educational research Education An Anatomy of the Discipline will occupy a central place in contemporary literature about education although based on evidence from British universities its implications are important across the world The book will be invaluable reading for all professionals working in university departments and faculties of education as well as those with an interest in the changing role of the university in contemporary society
