Shapley Value Essays In Honor Of Lloyd S Shapley:

The Shapley value Alvin E. Roth,1988-10-28 This volume makes accessible the large body of work that has grown out of Shapley s seminal 1953 paper *Handbook of Game Theory with Economic Applications* R.J. Aumann,S. Hart,1992 This is the second of three volumes surveying the state of the art in Game Theory and its applications to many and varied fields in particular to economics The chapters in the present volume are contributed by outstanding authorities and provide comprehensive coverage and precise statements of the main results in each area The applications include empirical evidence The following topics are covered communication and correlated equilibria coalitional games and coalition structures utility and subjective probability common knowledge bargaining zero sum games differential games and applications of game theory to signalling moral hazard search evolutionary biology international relations voting procedures social choice public economics politics and cost allocation This handbook will be of interest to scholars in economics political science psychology mathematics and biology For more information on the Handbooks in Economics series please see our home page on http www elsevier nl locate hes The Oxford Handbook of Public Choice, Volume 1 Roger D. Congleton,Bernard N. Grofman,Stefan Voigt,2018-12-07 The Oxford Handbook of Public Choice provides a comprehensive overview of the research in economics political science law and sociology that has generated considerable insight into the politics of democratic and authoritarian systems as well as the influence of different institutional frameworks on incentives and outcomes The result is an improved understanding of public policy public finance industrial organization and macroeconomics as the combination of political and economic analysis shed light on how various interests compete both within a given rules of the games and at times to change the rules These volumes include analytical surveys syntheses and general overviews of the many subfields of public choice focusing on interesting important and at times contentious issues Throughout the focus is on enhancing understanding how political and economic systems act and interact and how they might be improved Both volumes combine methodological analysis with substantive overviews of key topics This first volume covers voting and elections interest group competition and rent seeking including corruption and various normative approaches to evaluating policies and politics Throughout both volumes important analytical concepts and tools are discussed including their application to substantive topics Readers will gain increased understanding of rational choice and its implications for collective action various explanations of voting including economic and expressive the role of taxation and finance in government dynamics how trust and persuasion influence political outcomes and how revolution coups and authoritarianism can be explained by the same set of analytical tools as enhance understanding of the various forms of democracy **Collected Papers** Robert J. Aumann,2000 Robert Aumann s career in game theory has spanned over research from his doctoral dissertation in 1956 to papers as recent as January 1995 Threaded through all of Aumann s work symbolized in his thesis on knots is the study of relationships between different ideas between different phenomena and between ideas and phenomena When you look

closely at one scientific idea writes Aumann you find it hitched to all others It is these hitches that I have tried to study The papers are organized in several categories general knot theory decision theory utility and subjective probability strategic games coalitional games and mathematical methods Aumann has written an introduction to each of these groups that briefly describes the content and background of each paper including the motivation and the research process and relates it to other work in the collection and to work by others There is also a citation index that allows readers to trace the considerable body of literature which cites Aumann s own work **Power Indices and Coalition Formation** M.J. Holler,Guillermo Owen,2013-06-29 In recent years publications on power indices and coalition formation have multiplied Obviously the application of these concepts to political institutions more specifically to the analysis of the European Union and as it seems the election of the President of the United States is getting more and more popular There are however also new theoretical instruments and perspectives that support these applications First of all the probabilistic model of coalition formation has to be mentioned which is made operational by the multilinear extension of the characteristic function form of coalition games This instrument triggered off a reinterpretation of existing power indices and the formulation of new indices This development is accompanied by an intensive discussion of the concept of power in general what do we measure when we apply power measures and the properties that an adequate measure of power has to satisfy Various concepts of monotonicity were proposed as litmus test The discussion shows that the underlying theories of coalition formation play a decisive role New results will be discussed in this volume Its contributions put flesh and blood on the theoretical innovations and their applications that led to a growing interest in power indices and coalition formation **Introducing Game Theory and its Applications** Elliott Mendelson,2004-07-03 The mathematical study of games is an intriguing endeavor with implications and applications that reach far beyond tic tac toe chess and poker to economics business and even biology and politics Most texts on the subject however are written at the graduate level for those with strong mathematics economics or business backgrounds In a clear and refreshing departure from this trend Introducing Game Theory and its Applications presents an easy to read introduction to the basic ideas and techniques of game theory After a brief introduction the author begins with a chapter devoted to combinatorial games a topic neglected or treated minimally in most other texts The focus then shifts to two person zero sum games and their solution Here the author presents the simplex method based on linear programming for solving these games and develops within his presentation the required background in linear programming The final chapter presents some of the fundamental ideas and tools of non zero sum games and games with more than two players including an introduction to cooperative game theory This book will not only satisfy the curiosity of those whose interest in the subject was piqued by the 1994 Nobel Prize awarded to Harsanyi Nash and Selten It also prepares its readers for more advanced study of game theory s applications in economics business and the physical biological and social sciences **An Introductory Course on Mathematical Game Theory and Applications** Julio González-Díaz,Ignacio García-Jurado,M.

Gloria Fiestras-Janeiro,2023-12-01 Game theory provides a mathematical setting for analyzing competition and cooperation in interactive situations The theory has been famously applied in economics but is relevant in many other sciences such as psychology computer science artificial intelligence biology and political science This book presents an introductory and up to date course on game theory addressed to mathematicians and economists and to other scientists having a basic mathematical background The book is self contained providing a formal description of the classic game theoretic concepts together with rigorous proofs of the main results in the field The theory is illustrated through abundant examples applications and exercises The style is distinctively concise while offering motivations and interpretations of the theory to make the book accessible to a wide readership The basic concepts and results of game theory are given a formal treatment and the mathematical tools necessary to develop them are carefully presented In this second edition the content on cooperative games is considerably strengthened with a new chapter on applications of cooperative games and operations research including some material on computational aspects and applications outside academia *Global Liveable And Smart Cities Index: Ranking Analysis, Simulation And Policy Evaluation* Khee Giap Tan,Tao Oei Lim,Yanjiang Zhang,Isaac Yang En Tan,2019-11-15 A rising proportion of the global population are moving to cities in search of a better standard of living However although urbanisation has its benefits unchecked urbanisation can lead to a host of challenges such as congestion and limited access to public services As such the concept of urban liveability has been garnering more attention from policymakers and academics who are interested in mitigating the negative effects of urbanisation In this context the Asia Competitiveness Institute ACI has released the 2018 Global Liveable and Smart Cities Index GLSCI the third in its series of liveability indices The GLSCI attempts to measure the liveability of an average resident in a city More importantly this year s edition has added considerations to the concept of smart cities and the role that these technologies can play in augmenting the liveability of a city s residents It also builds on ACI s past liveability indices by expanding the number of cities in the index to 78 notably with African cities for the first time In addition this book includes two case studies on liveability The first one concerns the relationship between a city s liveability smartness connectivity and agglomeration while the other is a case study on the 99 year lease of public housing in Singapore *An Introductory Course on Mathematical Game Theory* Julio González-Díaz,Ignacio García-Jurado,M. Gloria Fiestras-Janeiro,2021-10-22 Game theory provides a mathematical setting for analyzing competition and cooperation in interactive situations The theory has been famously applied in economics but is relevant in many other sciences such as political science biology and more recently computer science This book presents an introductory and up to date course on game theory addressed to mathematicians and economists and to other scientists having a basic mathematical background The book is self contained providing a formal description of the classic game theoretic concepts together with rigorous proofs of the main results in the field The theory is illustrated through abundant examples applications and exercises The style is distinctively concise while offering motivations and interpretations of the

theory to make the book accessible to a wide readership The basic concepts and results of game theory are given a formal treatment and the mathematical tools necessary to develop them are carefully presented Cooperative games are explained in detail with bargaining and TU games being treated as part of a general framework The authors stress the relation between game theory and operations research The book is suitable for a graduate or an advanced undergraduate course on game theory   Set Functions, Games and Capacities in Decision Making Michel Grabisch,2016-06-15 The book provides a thorough treatment of set functions games and capacities as well as integrals with respect to capacities and games in a mathematical rigorous presentation and in view of application to decision making After a short chapter introducing some required basic knowledge linear programming polyhedra ordered sets and notation the first part of the book consists of three long chapters developing the mathematical aspects This part is not related to a particular application field and by its neutral mathematical style is useful to the widest audience It gathers many results and notions which are scattered in the literature of various domains game theory decision combinatorial optimization and operations research The second part consists of three chapters applying the previous notions in decision making and modelling decision under uncertainty decision with multiple criteria possibility theory and Dempster Shafer theory   **Trustworthy Machine Learning for Healthcare** Hao Chen,Luyang Luo,2023-07-30 This book constitutes the proceedings of First International Workshop TML4H 2023 held virtually in May 2023 The 16 full papers included in this volume were carefully reviewed and selected from 30 submissions The goal of this workshop is to bring together experts from academia clinic and industry with an insightful vision of promoting trustworthy machine learning in healthcare in terms of scalability accountability and explainability   **LISS 2012** Zhenji Zhang,Runtong Zhang,Juliang Zhang,2013-03-19 Information and communication technology has helped to provide a more effective network infrastructure and development platform for logistics and service operations In order to meet the needs of consumers and particularly to promote low carbon development processes new types of services will also emerge LISS 2012 is a prime international forum for both researchers and industry practitioners to exchange the latest fundamental advances in the state of the art and practice of logistics informatics service operations and service science Experts and researchers from related fields will discuss current issues and future development opportunities discuss and analyze developing trends and exchange the latest research and academic thought The theme of the conference is Logistics and Service Science based on the Internet of Things   **Network Economics and the Allocation of Savings** Philipp Servatius,2011-10-20 This book provides a game theoretic model of interaction among VoIP telecommunications providers regarding their willingness to enter peering agreements with one another The author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees At the same time termination fees can have a countering and dominant effect resulting in an environment in which VoIP firms decide against peering Various scenarios of peering and rules for allocation of the savings are considered The first part covers the relevant aspects of game theory and

network theory trying to give an overview of the concepts required in the subsequent application The second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between VoIP firms The conditions under which firms are willing to peer are then described considering the possible influence of a regulatory body   **Reasoning Web. Declarative Artificial Intelligence** Mantas Šimkus,Ivan Varzinczak,2022-01-31 The purpose of the Reasoning Web Summer School is to disseminate recent advances on reasoning techniques and related issues that are of particular interest to Semantic Web and Linked Data applications It is primarily intended for postgraduate students postdocs young researchers and senior researchers wishing to deepen their knowledge As in the previous years lectures in the summer school were given by a distinguished group of expert lecturers The broad theme of this year s summer school was again Declarative Artificial Intelligence and it covered various aspects of ontological reasoning and related issues that are of particular interest to Semantic Web and Linked Data applications The following eight lectures were presented during the school Foundations of Graph Path Query Languages On Combining Ontologies and Rules Modelling Symbolic Knowledge Using Neural Representations Mining the Semantic Web with Machine Learning Main Issues That Need to Be Known Temporal ASP From Logical Foundations to Practical Use with telingo A Review of SHACL From Data Validation to Schema Reasoning for RDF Graphs and Score Based Explanations in Data Management and Machine Learning   **Fair Revenue Sharing Mechanisms for Strategic Passenger Airline Alliances** Demet Çetiner,2013-04-03 A major problem arising in airline alliances is to design allocation mechanisms determining how the revenue of a product should be shared among the airlines The nucleolus is a concept of cooperative game theory that provides solutions for allocating the cost or benefit of a cooperation This work provides fair revenue proportions for the airline alliances based on the nucleolus which assumes a centralized decision making system The proposed mechanism is used as a benchmark to evaluate the fairness of the revenue sharing mechanisms where the alliance partners behave selfishly Additionally a new selfish revenue allocation rule is developed that improves the performance of the existing methods   *Financial Cryptography and Data Security* Sarah Meiklejohn,Kazue Sako,2019-08-29 This book constitutes the thoroughly refereed post conference proceedings of the 22nd International Conference on Financial Cryptography and Data Security FC 2018 held in Nieuwport Cura ao in February March 2018 The 27 revised full papers and 2 short papers were carefully selected and reviewed from 110 submissions The papers are grouped in the following topical sections Financial Cryptography and Data Security Applied Cryptography Mobile Systems Security and Privacy Risk Assessment and Management Social Networks Security and Privacy and much more   **Firms in the International Economy** Sjoerd Beugelsdijk,Steven Brakman,Hans Van Ees,Harry Garretsen,2013-12-13 Essays by leading scholars suggest that insights from international business could enrich firm heterogeneity research in international economics Despite their common roots international economics IE and international business IB have developed into two distinct fields of study Economists have directed their efforts at formalizing

the workings of international trade and investment at the macroeconomic level business scholars have relied more on data driven conceptual narratives than mathematical tools But the recent focus of IE literature on firm heterogeneity suggests that IE would benefit from IB analyses of the behavior and organization of the internationalizing firm The contributions to this volume investigate ways that insights from IB can enrich IE research in firm heterogeneity The contributors discuss firm specific advantages in international trade and investment considering the firm as the unit of analysis and managerial inputs as a variable in market entry decisions analyze interactions between a firm and its external environment including local corporate philanthropy and institutional settings examine the boundaries of the firm and organizational choices such as the make or buy decision and investigate technology transfer and innovation offshoring discussing the role of subsidiaries inventor employment and other related topics Although IE and IB look at international firms from different perspectives these contributions make it clear that there is a potential for a productive exchange of insights and information between the two disciplines Contributors Laura Abramovsky Carlo Altomonte Sjoerd Beugelsdijk Bruce Blonigen Pamela Bombarda Steven Brakman Julia Darby Rodolphe Desbordes Filippo Di Mauro Mar a Garc a Vega Harry Garretsen Elena Huergo Florian Mayneris Quyen T K Nguyen Verena Nowak Cheyney O Fallon Gianmarco Ottaviano Michael Pfl ger Filomena Pietrovito Sandra Poncet Alberto Franco Pozzolo Alan M Rugman Armando Rungi Stephan Russek Davide Sala Luca Salvatici Christian Schwarz Roger Smeets Jens Suedekum Hans van Ees Vincent Vicard Ian Wooton Erdal Yalcin **Advances in Information and Communication** Kohei Arai,Rahul Bhatia,2019-02-01 This book presents a remarkable collection of chapters that cover a wide range of topics in the areas of information and communication technologies and their real world applications It gathers the Proceedings of the Future of Information and Communication Conference 2019 FICC 2019 held in San Francisco USA from March 14 to 15 2019 The conference attracted a total of 462 submissions from pioneering researchers scientists industrial engineers and students from all around the world Following a double blind peer review process 160 submissions including 15 poster papers were ultimately selected for inclusion in these proceedings The papers highlight relevant trends in and the latest research on Communication Data Science Ambient Intelligence Networking Computing Security and the Internet of Things Further they address all aspects of Information Science and communication technologies from classical to intelligent and both the theory and applications of the latest technologies and methodologies Gathering chapters that discuss state of the art intelligent methods and techniques for solving real world problems along with future research directions the book represents both an interesting read and a valuable asset *Supply Chain Optimization, Design, and Management: Advances and Intelligent Methods* Minis, Ioannis,Zeimpekis, Vasileios,Dounias, Georgios,Ampazis, Nicholas,2010-12-31 Computational Intelligence CI is a term corresponding to a new generation of algorithmic methodologies in artificial intelligence which combines elements of learning adaptation evolution and approximate fuzzy reasoning to create programs that can be considered intelligent Supply Chain Optimization Design and Management Advances and Intelligent Methods

presents computational intelligence methods for addressing supply chain issues Emphasis is given to techniques that provide effective solutions to complex supply chain problems and exhibit superior performance to other methods of operations research   Biocomputing 2025 - Proceedings Of The Pacific Symposium Russ B Altman,Lawrence Hunter,Marylyn D Ritchie,Tiffany A Murray,Teri E Klein,2024-11-29 The Pacific Symposium on Biocomputing PSB 2025 is an international multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance Presentations are rigorously peer reviewed and are published in an archival proceedings volume PSB 2025 will be held on January 4 8 2025 in Kohala Coast Hawaii Tutorials and workshops will be offered prior to the start of the conference PSB 2025 will bring together top researchers from the US the Asian Pacific nations and around the world to exchange research results and address open issues in all aspects of computational biology It is a forum for the presentation of work in databases algorithms interfaces visualization modeling and other computational methods as applied to biological problems with emphasis on applications in data rich areas of molecular biology The PSB has been designed to be responsive to the need for critical mass in sub disciplines within biocomputing For that reason it is the only meeting whose sessions are defined dynamically each year in response to specific proposals PSB sessions are organized by leaders of research in biocomputing s hot topics In this way the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field
