Management Erika J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks

Elasmobranch Biodiversity, Conservation and Management Sarah L. Fowler, Tim M. Reed, Frances Dipper, 2002 The Darwin Elasmobranch Biodiversity Conservation and Management project in Sabah held a three day international seminar that included a one day workshop in order to highlight freshwater and coastal elasmobranch conservation issues in the region and worldwide to disseminate the result of the project to other Malaysian states and countries and to raise awareness of the importance of considering aspects of elasmobranch biodiversity in the context of nature conservation commercial fisheries management and for subsistence fishing communities These proceedings contain numerous peer reviewed papers originally presented at the seminar which cover a wide range of topics with particular reference to species from freshwater and estuarine habitats The workshop served to develop recommendations concerning the future prospects of elasmobranch fisheries biodiversity conservation and management This paper records those conclusions which highlight the importance of elasmobranchs as top marine predators and keystone species noting that permanent damage to shark and ray populations

are likely to have serious and unexpected negative consequences for commercial and subsistence yields of other important fish stocks
