Sedimentation Der Variszischen Molasse

Günther H. Friedrich, Peter M. Herzig

Sedimentation Der Variszischen Molasse:

Sedimentation der variszischen Molasse im Thüringer Wald Harald Lützner, 1981-12-31 Keine ausführliche Beschreibung für Sedimentation der variszischen Molasse im Thüringer Wald verfügbar *Aspects of Fluvial Sedimentation in the Lower Triassic Buntsandstein of Europe* Detlef Mader, 2006-04-10 **The Permian of Northern Pangea** Peter A. Scholle, Tadeusz M. Peryt, Dana S. Ulmer-Scholle, 2012-12-06 The Permian was a remarkable time period. It represents the maximum stage of Pangean continental assembly, includes a major global climatic shift from glacial to nonglacial conditions, icehouse greenhouse transition, and is terminated by one of the most profound faunal/floral extinction events in the Earth's history. In addition, Permian oceans, although poorly understood, must have had some quite unique characteristics. Permian seas reached the most extreme values of carbon/sulfur and strontium isotopic ratios ever achieved in Phanerozoic time, and the isotopic ratios of all three elements abruptly returned to more normal values at or very close to the Permian-Triassic boundary. Finally, the Permian is marked by an abundance of important sedimentary mineral resources. It has large fossil fuel concentrations: coal, oil, and natural gas; enormous phosphate reserves; and very extensive evaporite deposits, including gypsum, anhydrite, and halite, as well as a variety of potash salts. Study of the Permian has been hampered, however, by a number of factors. These include a scattered geologic literature presented in a variety of languages; a confusing regional and global stratigraphic framework based in part on inadequate type sections and largely provincial, often poorly correlatable faunas. All have contributed to the sparsity and inadequacy of overviews of this critical geological interval. These two volumes attempt to bring together some of the widely scattered observations about these fascinating rocks, at least for the northern, predominantly nonglacial parts of Pangea. **Base Metal Sulfide Deposits in Sedimentary and Volcanic Environments** Günther H. Friedrich, Peter M. Herzig, 2013-03-09 The geology and metallogeny of base metal sulfide deposits in Europe, Africa, and Australia was the topic of the DMG/GDMB/SAG Joint Meeting held in Aachen, FRG, September 16-19, 1985. Divided into two parts, the presented papers cover the description and interpretation of sediment-hosted as well as volcanic sediment-hosted and volcanic-hosted copper, zinc, lead, gold, silver deposits. The present compilation is an overview of current research activities and results on copper, zinc, lead deposits in classical mining districts, considering geological, lithological, geochemical, and tectonic parameters of ore formation. Even in periods of depressed metal prices, base metal sulfide deposits still remain one of the most attractive mineral exploration targets. This extensive review provides valuable information to researchers and explorationists. Hydraulic Proppant Fracturing and Gravel Packing D. Mader, 1989-03-01 Many aspects of hydraulic proppant fracturing have changed since its innovation in 1947. The main significance of this book is its combination of technical and economical aspects to provide an integrated overview of the various applications of proppants in hydraulic fracturing and gravel in sand control. The monitoring of fractures and gravel packs by well logging and seismic techniques is also included. The book's extensive coverage of the subject should be of special interest to reservoir geologists and engineers.

production engineers and technologists and well log analysts *Sedimentary and Volcanic Rotliegendes of the Saale Depression* Harald Lützner, 1987 *Tectonic Regime of Molasse Epochs* ,1982 *Veröffentlichungen des Zentralinstituts für Physik der Erde* ,1984 The Geology of Central Europe Tom McCann, 2008 Volume 1 focuses on the evolution of Central Europe from the Precambrian to the Permian a dynamic period which traces the formation of Central Europe from a series of microcontinents that separated from Gondwana through to the creation of Pangaea Separate summary chapters on the Cadomian Caledonian and Variscan orogenic events as well as on Palaeozoic magmatism provide an overview of the tectonic and magmatic evolution of the region These descriptions sometimes extend beyond the borders of Central Europe to take in the Scottish and Irish Caledonides as well as the Palaeozoic successions in the Baltic region *Late Palaeozoic and Caenozoic Continental Sedimentation and Magmatism in the Southern Part of the G.D.R.* ,1985
