Sedimentation Of The Wood Bay Spitsberge:

Late Paleozoic and Mesozoic Continental Sedimentation, Northeastern North America Geological Society of America. Northeastern Section, 2018 **Geology of an Area Astride the Billefjorden Fault Zone, Northern**

Dicksonland, Spitsbergen, Svalbard D. L. Lamar, David Neil Douglass, 1995 *Petroleum Geology of the North European Margin* A. M. Spencer, 2012-12-06 Complete Proceedings of the Symposium organised by the Norwegian Petroleum Society and held at Trondheim Norway in 1983 **Intra-continental Fold Belts CASE 1 West Spitsbergen** Franz

Tessensohn, 2001 The onshore geology can provide direct access to critical rock formations and structures and is therefore able to add detail support or modification to the story of the formation of the oceanic basins in the Arctic and North Atlantic a story initially derived from offshore geophysical data The CASE program has since been modified to the study of Circum Arctic Structural Events it has continued to the completion of expedition CASE 6 in 2000 and has been extended to include work in North Greenland Ellesmere Island and Siberia The general concept of onshore offshore correlations however is unchanged *The Arctic Ocean* Alan Nairn, 2013-11-22 This trip backward in time capsulizes in a general way the geologic development of the area that is now northern Alaska The Cretaceous through Recent history is predominantly one of erosion of the ancient Brooks Range and filling of the Colville Geosyncline under processes like those in Operation today All the rocks older than Jurassic however were deposited far from their present sites One of the intriguing tectonic puzzles involves the geographic positions and relative timing of events that occurred during the orogeny that built the Brooks Range I suggest that pre Cretaceous deposition took place far to the north along the western margin of the Caledonides Subsequently the region that is now northern Alaska moved southward and impinged upon a northward moving plate or plates from the Pacific region Interactions between these two major parts of the earth s crust produced the Brooks Range during the Jurassic Later developments reflect continuing readjustments of the northern third of of thrust Alaska as southward movement was dissipated in diverse systems faulting and lateral displacement ACKNOWLEDGMENTS I am indebted to many colleagues who during the past 30 years shared with me the excitement and pleasures of exploring the geology of northern Alaska Among these are W P Brosge H N Reiser R L Detterman A K Armstrong A L Bowsher E G Sable I L TAILLEUR C G Mull M D Mangus A H Lachenbruch M C Lachenbruch R L Morris C J *Aspects of Fluvial Sedimentation in the Lower Triassic Buntsandstein of Europe* Detlef Mader, 2006-04-10 **Sedimentation of the Wood Bay Formation (Devonian) of Spitsbergen** P. F.

Friend, 1972 **Structural and Tectonic Modelling and its Application to Petroleum Geology** R.M. Larsen, H. Brekke, B.T. Larsen, E. Talleraas, 2013-10-22 This monograph presents a unique combination of structural and tectonic modelling with applied petroleum geological problems Focussing on the Norwegian Continental Shelf and neighbouring areas it includes discussion covering all scales from development of sedimentary basins to formation of fractures and joints on a microscale and from exploration to the exploitation of hydrocarbons The book s coverage of structural and tectonic

modelling petroleum geology applications and the treatment of the Norwegian Continental Shelf should make this book an invaluable resource book for advanced students of structural and tectonic modelling teachers and researchers as well as for geologists and geophysicists in the petroleum industry *Geological Survey of Canada, Paper 79-09* , Sedimentary Processes, Environments and Basins Gary Nichols,Edward Williams,Chris Paola,2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter s research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences
