Seeing The Forest And The Trees Human Environment Interactions In Forest Ecosystems:

Seeing the Forest and the Trees Emilio F. Moran, Elinor Ostrom, 2005 Seeing the Forest and the Trees examines changes in land cover land use in forested regions as major contributors to global environmental change **Forest Landscapes and Global Change** João C. Azevedo, Ajith H. Perera, M. Alice Pinto, 2014-07-11 Climate change urban sprawl abandonment of agriculture intensification of forestry and agriculture changes in energy generation and use expansion of infrastructure networks habitat destruction and degradation and other drivers of change occur at increasing rates They affect patterns and processes in forest landscapes and modify ecosystem services derived from those ecosystems Consequently rapidly changing landscapes present many new challenges to scientists and managers While it is not uncommon to encounter the terms global change and landscape together in the ecological literature a global analyses of drivers of change in forest landscapes and their ecological consequences have not been addressed adequately That is the goal of this volume an exploration of the state of knowledge of global changes in forested landscapes with emphasis on causes and effects and challenges faced by researchers and land managers Initial chapters identify and describe major agents of landscape change climate fire and human activities The next series of chapters address implications of changes on ecosystem services biodiversity conservation and carbon flux A chapter that describes methodologies of detecting and monitoring landscape changes is presented followed by chapter that highlights the many challenges forest landscape managers face amidst of global change Finally we present a summary and a synthesis of the main points presented in the book Each chapter will contain the individual research experiences of chapter authors augmented by review and synthesis of global scientific literature on relevant topics as well as critical input from multiple peer reviewers Environmental Anthropology Today Helen Kopnina, Eleanor Shoreman-Ouimet, 2011-08-05 This collection offers a wide ranging consideration of the field which illustrates how environmental anthropology can increase our understanding and help find solutions to environmental problems

forest management and stewardship has been debated for decades. Some advocate for governmental control and oversight. Some say that the only way to stem the tide of deforestation is to place as many tracts as possible under strict protection. Caught in the middle of this debate, forest inhabitants of the developing world struggle to balance the extraction of precarious livelihoods from forests while responding to increasing pressures from national governments, international institutions, and their own perceptions of environmental decline to protect biodiversity, restore forests, and mitigate climate change. Mexico presents a unique case in which much of the nation's forests were placed as commons in the hands of communities who, with state support and their own entrepreneurial vigor, created community forest enterprises (CFEs). David Barton Bray, who has spent more than thirty years engaged with and researching Mexican community forestry, shows that this reform has transformed forest management in that country at a scale and level of maturity unmatched anywhere else in the world. For decades, Mexico has been conducting a de facto large-scale experiment in the design of a national social ecological system (SES) focused on community forests. What happens when you give subsistence communities rights over forests as well as training, organizational support, equipment, and financial capital? Do the communities destroy the forest in the name of economic development, or do they manage them sustainably, generating current income while maintaining intergenerational value as a resource for their children? Bray shares the scientific and social evidence that can now begin to answer these questions. This is an invaluable resource for students, researchers, and the interested public on the future of global forest resilience and the possibilities for a good Anthropocene.
