Selected Issues In Mathematics Education:

Selected Issues in Mathematics Education Mary Montgomery Lindquist, 1980-01-01 0821111140 **Selected Issues and Problems in Social Policy** Deryck R. Brown, 1998 This is the second volume in the Consortium Graduate School's series Studies in Caribbean Public Policy and represents the results of a programme of training in multidisciplinary policy oriented research provided to graduate professionals from Caribbean countries through the MSc Development Studies degree. The volume focuses on selected issues and problems in social policy. Each of the seven papers presented here is a case study which offers fresh insights or radical and new interpretations of persistent problems in the region. The first three papers treat the society's most vulnerable or marginal social groups: youths, women, and the elderly. Other areas of focus are education, crime, and policing, rural to urban migration, and labour relations. **Resources in Education**, 1994 *Teaching and Learning Mathematical Problem Solving* Edward A. Silver, 2013-04-03 A provocative collection of papers containing comprehensive reviews of previous research, teaching techniques, and pointers for direction of future study. Provides both a comprehensive assessment of the latest research on mathematical problem solving with special emphasis on its teaching and an attempt to increase communication across the active disciplines in this area. **Tools and Mathematics** John Monaghan, Luc Trouche, Jonathan M. Borwein, 2016-04-18 This book is an exploration of tools and mathematics and issues in mathematics education related to tool use. The book has five parts. The first part reflects on doing a mathematical task with different tools, followed by a mathematician's account of tool use in his work. The second considers prehistory and history: tools in the development from ape to human; tools and mathematics in the ancient world; tools for calculating; and tools in mathematics instruction. The third part opens with a broad review of technology and intellectual trends circa 1970 and continues with three case studies of approaches in mathematics education and the place of tools in these approaches. The fourth part considers issues related to mathematics: instructions, curriculum, assessment, and policy; the calculator debate; mathematics in the real world; and teachers' use of technology. The final part looks to the future: task and tool design and new forms of activity via connectivity and computer games. *Selected Problems of the Vietnamese Mathematical Olympiad (1962-2009)* Hai Chau Le, Hai Khoi Le, 2010 Vietnam has actively organized the National Competition in Mathematics and since 1962 the Vietnamese Mathematical Olympiad (VMO). On the global stage, Vietnam has also competed in the International Mathematical Olympiad (IMO) since 1974 and constantly emerged as one of the top ten. To inspire and further challenge readers, we have gathered in this book selected problems of the VMO from 1962 to 2008. A number of Selection Test problems are also included to aid in the formation and training of a national team for IMO. The book is highly useful for high school students and teachers, coaches, and instructors preparing for mathematical olympiads as well as non-experts simply interested in having the edge over their opponents in mathematical competitions. **A Focus on Fractions** Marjorie M.
