The Problem of Disenchantment Egil Asprem,2018-05-31 Challenges the conventional view of a disenchanted and secular modernity and recovers the complex relation that exists between science religion and esotericism in the modern world Max Weber famously characterized the ongoing process of intellectualization and rationalization that separates the natural world from the divine by excluding magic and value from the realm of science and reason and fact from the realm of religion as the disenchantment of the world Egil Asprem argues for a conceptual shift in how we view this key narrative of modernity Instead of a sociohistorical process of disenchantment that produces increasingly rational minds Asprem maintains that the continued presence of magic and enchantment in people's everyday experience of the world created an intellectual problem for those few who were socialized to believe that nature should contain no such incalculable mysteries Drawing on a wide range of early twentieth century primary sources from theoretical physics occultism embryology radioactivity psychical research and other fields Asprem casts the intellectual life of high modernity as a synchronic struggle across conspicuously different fields that shared surprisingly similar intellectual problems about value meaning and the limits of knowledge The Problem of Disenchantment is in its entirety extraordinarily well researched argued and written representing at once the most complete and nuanced treatment of the notion of disenchantment within this network of scientific religious philosophical and esoteric discourses and currents Nova Religio

DeKosky, 2023-10-10 In *Knowledge and Cosmos* Development and Decline of the Medieval Perspective 2nd Edition Robert K DeKosky focuses on issues in astronomy cosmology physics matter theory philosophy and theology vital to the Copernican Revolution This book describes efforts among individuals advocating different world views to fit new ideas compatibly into broad perspectives reflecting four traditional patterns of interpretation teleological mechanical occultist and mathematico descriptive These four modes had guided medieval accounts of heavenly phenomena material process and motion The teleological explanation prevalent in Aristotle's natural philosophy posited final causes ends or goals toward which objects strove or attempted to become Ancient classical atomists had emphasized strictly mechanical explanations invoking direct material contact and collision of moving matter as agents of physical change Traditions of astrology magic and alchemy embraced an occultist pattern of interpretation citing hidden forces opaque to

both sensual detection and rational understanding as explanations of various phenomena Finally the mathematico descriptive approach interpreted natural phenomena according to geometric or arithmetic relationships unlike the other three this did not involve causal explanation of a process Part I discusses development of the four patterns in the ancient period and their uneasy medieval relationships with each other and with basic Judaeo Muslim Christian exigencies of faith Theory of the heavens follows including the mathematico descriptive approach of Ptolemaic astronomy the teleological and mechanical cosmology of Aristotle and occultist interpretations of astrologers and magicians Part I then turns to matter and materiality discussing differences among the mechanical philosophy of classical atomism teleological emphases in Aristotle s material theory and occultist assumptions of some alchemists Finally Part I analyzes conceptions of motion focusing on Aristotelian interpretations and critical commentaries thereon during the Middle Ages Part II relates struggles of leading early modern figures to adapt new concepts e g Copernicus heliocentric astronomy cosmology Galileo s inertial theories of motion and Kepler s elliptical planetary orbit to an allegiance to two or more of the four patterns of interpretation By this approach it identifies decreasing dependence on teleological explanation of physical phenomena as crucial to decline of medieval interpretations of those phenomena followed by rejection of teleology in the natural philosophy of Descartes and subsequent fruitful confluence of the mechanical mathematico descriptive and occultist patterns in the physics and cosmology of Isaac Newton
