

Adaptive Methods for Contact Problems

Peter Wriggers

Institut für Baumechanik und Numerische Mechanik, Universität Hannover, Germany

Abstract This contribution is concerned with the adaptive finite-element-formulation of contact problems. For this, first the theoretical background of continuum mechanics and contact kinematics is given. Next the basic finite element formulation for large deformation contact processes is presented for two-dimensional problems. The development of the discretization of contact contributions follows. Here standard approaches are discussed for the case of frictional and frictionless contact. Finally different adaptive strategies involving as well residual based error estimators as error indicators based on superconvergence patch recovery are derived and formulated to include the contributions due to contact. Also error estimators based on dual principles are discussed. Examples show the performance of the different formulations and adaptive strategies.

1 Introduction

Boundary value problems involving contact are of great importance in industrial applications in mechanical and civil engineering. The range of application starts with relatively simple problems like foundations or bearings and includes metal forming processes, rubber sealings, drilling problems, crash analysis of cars, rolling contact between car tires and the road. Other applications are related to biomechanics where human joints, implantats or teeth are of consideration. Due to this variety contact problems are today combined either with large elastic or inelastic deformations including time dependent responses. Thermal coupling might have to be considered, see cooling of electronic devices, heat removal within nuclear power plant vessels or thermal insulation of astronautic vehicles. For most industrial applications numerical methods have to be applied since the contacting bodies have complex geometries or undergo large deformations. Due to that the appropriate meshing for a problem can often not be found a priori to the computation. Hence there is a need to develop adaptive methods for contact problems.

The main idea of adaptive mesh refinement is depicted in Fig. 1. It shows the basic ingredients of an adaptive method for contact problems. Part 1 is the determination of the contact, part 2 a solution of the problem with a given mesh and finally the adaptive process in part 3 leads to an automatic mesh refinement of the discretization.

Adaptive methods rely on a posteriori error estimators which estimate e.g. the difference between the exact solution $\mathbf{u}$ and the approximate solution $\mathbf{u}_h$ of the displacement field. For an elliptic variational problem of order m with complete interpolation polynomials of order k in a norm containing derivatives of degree s , see Straug and Fix (1973), one

The Boundary Integral Approach to Static and Dynamic Contact Problems H. Antes, P.D. Panagiotopoulos, 2013-03-07 The fields of boundary integral equations and of inequality problems or more generally of nonsmooth mechanics have seen in a remarkably short time a considerable development in mathematics and in theoretical and applied mechanics The engineering sciences have also benefited from these developments in that open problems have been attacked successfully and entirely new methodologies have been developed The contact problems of elasticity is a class of problems which has offered many open questions to deal with both to the research workers working on the theory of boundary integral equations and to those working on the theory of inequality problems Indeed the area of static and dynamic contact problems could be considered as the testing workbench of the new developments in both the inequality problems and in the boundary integral equations This book is a first attempt to formulate and study the boundary integral equations arising in inequality contact problems The present book is a result of more than two decades of research and teaching activity of the first author on boundary integral equations and of the second author on inequality problems as well as the outgrowth of seminars and courses for a variety of audiences in the Technical University of Aachen the Aristotle University of Thessaloniki the Universities of Bochum of Hamburg and Braunschweig the Pontificia Univ Catolica in Rio de Janeiro etc **Software Student's Handbook** Thomas Ledger, 2013 New Developments in Contact Problems Peter Wriggers, Panagiotis Panagiotopoulos, 1999-11-22 The book gives an overview on formulation mathematical analysis and numerical solution procedures of contact problems In this respect the book should be of value to applied mathematicians and engineers who are concerned with contact mechanics
