Even though cities are considered centers of modern political, cultural, and social life, many people still live in rural areas. According to The World Bank (no date) information, the percentage of the rural population keeps declining with every passing year. In particular, this value decreased from over 66% in 1960 to slightly more than 43% in 2020 (The World Bank, no date). As the United Nations (2018, para. 7) explains, "the global rural population is now close to 3.4 billion and is expected to rise slightly and then decline to 3.1 billion by 2050." This information means that many people live in the country worldwide.

The percentage of the rural population is lower for developed countries, including the United States and the United Kingdom. For example, the US Department of Agriculture (2021, para. 5) admits that 46 million US citizens lived in rural areas in 2017, which is slightly more than approximately 15% of the country's total population. Simultaneously, 9.7 million people (close to 17% of the state's population) live in rural regions in the United Kingdom (Department for Environment, Food, & Rural Affairs, 2021, para. 7). This information demonstrates that many people live in the village, meaning that they represent a significant research object.

Research Objective and Questions

The given proposal focuses on the issue that rural areas are insufficiently developed. Abreu and Mesias (2020, p. 578), as well as Veronika and Mónica (2020, p. 530), highlight the countryside's more mediocre financial state. Simultaneously, Lowe *et al.* (2019, p. 30) and Mukti *et al.* (2021, p. 1) comment on inefficiencies in the development of knowledge and expertise in rural regions. Thus, the objective of the proposal is to determine how the inhabitants of the country in the United Kingdom assess rural development from an economic point of view.

The research project is going to answer a few essential questions that are presented below:
