Revision Express Physics:

Descriptor Revision Sven Ove Hansson, 2017-11-26 This book provides a critical examination of how the choice of what to believe is represented in the standard model of belief change In particular the use of possible worlds and infinite remainders as objects of choice is critically examined Descriptors are introduced as a versatile tool for expressing the success conditions of belief change addressing both local and global descriptor revision The book presents dynamic descriptors such as Ramsey descriptors that convey how an agent's beliefs tend to be changed in response to different inputs It also explores sentential revision and demonstrates how local and global operations of revision by a sentence can be derived as a special case of descriptor revision Lastly the book examines revocation a generalization of contraction in which a specified sentence is removed in a process that may possibly also involve the addition of some new information to the belief set **Revise AS**

Foundations of Physics Mario Bunge, 2013-03-13 This is not an introduction to physics but an analysis of its foundations Indeed the aims of this book are 1 to analyze the form and content of some of the key ideas of physics 2 to formulate several basic physical theories in an explicit and orderly i e axiomatic fashion 3 to exhibit their presuppositions and discuss some of their philosophical implications 4 to discuss some of the controversial issues and 5 to debunk certain dusty philosophical tenets that obscure the understanding of physics and hinder its progress To the extent to which these goals are attained the volume can serve as a companion to studies in theoretical physics aiming at deepening the understanding of the logical structure and the physical meaning of our science In order to keep the book slender whole fields of basic physical research had to be excluded chiefly many body physics quantum field theories and elementary particle theories A large coverage was believed to be less important than a comparatively detailed analysis and reconstruction of three representative monuments classical mechanics general relativity and quantum mechanics as well as their usually unrecognized presuppositions The reader is invited to join the project and supply some of the many missing chapters or to rewrite the present ones entirely

Exploring Signature Pedagogies Regan A. R. Gurung, Nancy L. Chick, Aeron Haynie, 2023-07-03 From the Foreword These authors have clearly shown the value in looking for the signature pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women's Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how

their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords

Stability, dual consistency and conservation of summation-by-parts formulations for multiphysics problems Fatemeh Ghasemi Zinatabadi, 2019-08-02 In this thesis we consider the numerical solution of initial boundary value problems IBVPs Boundary and interface conditions are derived such that the IBVP under consideration is well posed We also study the dual problem and the related dual boundary interface conditions Once the continuous problem is analyzed we use finite difference operators with the Summation By Parts property SBP and a weak boundary interface treatment using the Simultaneous Approximation Terms SAT technique to construct high order accurate numerical schemes We focus in particular on stability conservation and dual consistency The energy method is used as our main analysis tool for both the continuous and numerical problems The contributions of this thesis can be divided into two parts The first part focuses on the coupling of different IBVPs Interface conditions are derived such that the continuous problem satisfy an energy estimate and such that the discrete problem is stable In the first paper two hyperbolic systems of different size posed on two domains are considered We derive the dual problem and dual interface conditions It is also shown that a specific choice of penalty matrices leads to dual consistency As an application we study the coupling of the Euler and wave equations In the fourth paper we examine how to couple the compressible and incompressible Navier Stokes equations In order to obtain a sufficient number of interface conditions the decoupled heat equation is added to the incompressible equations The interface conditions include mass and momentum balance and two variants of heat transfer The typical application in this case is the atmosphere ocean

coupling The second part of the thesis focuses on the relation between the primal and dual problem and the relation between dual consistency and conservation In the second and third paper we show that dual consistency and conservation are equivalent concepts for linear hyperbolic conservation laws We also show that these concepts are equivalent for symmetric or symmetrizable parabolic problems in the fifth contribution The relation between the primal and dual boundary conditions for linear hyperbolic systems of equations is investigated in the sixth and last paper It is shown that for given well posed primal dual boundary conditions the corresponding well posed dual primal boundary conditions can be obtained by a simple scaling operation It is also shown how one can proceed directly from the well posed weak primal problem to the well posed weak dual problem Den h r avhandlingen handlar om numeriska metoder f r att l sa initial och randv rdes problem Studien fokuserar p h rledningen av rand kopplingsvillkor som garanterar v lst lldhet Det duala problemet och dess duala rand kopplingsvillkor studeras ocks Dessa problem diskretiseras genom att anv nda noggranna finita differensscheman p SBP form eng summation by parts kombinerat med en svag randbehandling ben mnd SAT eng simultaneous approximation term Vi fokuserar s rskilt p stabilitet konservation och dualkonsistens Det fr msta analysverktyget f r b de det kontinuerliga och diskreta problemet r energimetoden Den fr sta delen av avhandlingen behandlar v lst lldhet och stabilitet f r koppling av olika system av ekvationer Kopplingsvillkoren r h rledda s att det kontinuerliga problemet uppfyller en energiuppskattning och s att det diskreta problemet r stabilt I den fr sta artikeln g rs analysen f r koppling av tv olika hyperboliska system p fr sta ordningens form Som till mpning kopplar vi Euler och v gekvationerna Koppling mellan kompressibla och inkompressibla Navier Stokes ekvationer studeras i den fj rde artikeln F r att f r tt antal kopplingsvillkor l gger vi till v rmeledningsekvationen till de inkompressibla ekvationerna Kopplingsvillkoren innefattar massans och r relsem ngdens bevarande samt tv varianter av v rme verf ring Den typiska till mpningen r koppling mellan atmosf r och hav Den andra delen av avhandlingen fokuserar p relationen mellan det prim ra och duala problemet och relationen mellan dualkonsistens och konservation I den andra och tredje artikeln visar vi att dualkonsistens och konservation r ekvivalenta koncept f r linj ra hyperboliska konserveringslagar I den femte artikeln visas att dessa koncept r ekvivalenta ven f r paraboliska problem Relationen mellan de prim ra och duala randvillkoren f r linj ra hyperboliska system av ekvationer i tv dimensioner studeras i den sista artikeln Vi visar att prim ra duala v lst llda randvillkor ger duala prim ra v lst llda randvillkor genom en enkel skalningsoperation Det visas ocks att man kan g direkt fr n det v lst llda svaga prim ra problemet till det v lst llda svaga duala problemet

Hearings United States. Congress. Senate. Committee on Post Office and Civil Service,1959 *Kant's Critique of Pure Reason and the Method of Metaphysics* Gabriele Gava,2023-05-25 In two often neglected passages of the Critique of Pure Reason Kant submits that the Critique is a treatise or a doctrine of method These passages are puzzling because the Critique is only cursorily concerned with identifying adequate procedures of argument for philosophy In this book Gabriele Gava argues that these passages point out that the Critique is the doctrine of method of metaphysics Doctrines

of method have the task of showing that a given science is indeed a science because it possesses architectonic unity which happens when it realizes the idea of a science According to Gava s novel approach the Critique establishes that metaphysics is capable of this unity and his reading of the Critique from this perspective not only illuminates the central role of the Transcendental Doctrine of Method within it but also clarifies the relationship between the different parts of the work
