

Group I Intron Splicing Mechanism

Autocatalytic or “Self-splicing”

Sequential Transesterifications:

Step I: 3' OH of an exogenous guanosine attacks the phosphodiester bond at the 5' splice site
-G covalently linked to intron
-5' exon now contains a 3' OH group

Step II: 3' OH of 5' exon attacks the phosphodiester bond of 3' splice site
-intron is released
-exons are ligated together

Joined exons (mature RNA)

Biocatalysis and Agricultural Biotechnology: Fundamentals, Advances, and Practices for a Greener Future Anjali Priyadarshini, Prerna Pandey, 2018-10-03 This new volume Biocatalysis and Agricultural Biotechnology: Fundamentals, Advances and Practices for a Greener Future looks at the application of a variety of technologies, both fundamental and advanced, that are being used for crop improvement, metabolic engineering, and the development of transgenic plants. The science of agriculture is among the oldest and most intensely studied by mankind. Human intervention has led to manipulation of plant gene structure for the use of plants for the production of bioenergy, food, textiles, among other industrial uses. A sound knowledge of enzymology, as well as the various biosynthetic pathways, is required to further utilize microbes as sources to provide the desired products for industrial utility. This volume provides an overview of all these aspects along with an updated review of the major plant biotechnology procedures and techniques, their impact on novel agricultural development, and crop plant improvement. Also discussed are the use of white biotechnology and metabolic engineering as prerequisites for a sustainable development. The importance of patenting of plant products, world food safety, and the role of several imminent organizations is also discussed. The volume provides a holistic view that makes it a valuable source of information for researchers of agriculture and biotechnology, as well as agricultural engineers, environmental biologists, environmental engineers, and environmentalists. Short exercises at the end of the chapters help to make the book suitable for course work in agriculture, biotechnology, genetics, biology, biotechnology, and plant science.
