Rickover And The Nuclear Navy The Discipline Of Technology:

Rickover and the Nuclear Navy Francis Duncan, 1990 No book will ever come closer than this to providing an inside overview of Admiral Hyman G Rickover's nuclear propulsion program. The author, an Atomic Energy Commission AEC historian assigned to the admiral's office, spent years observing the project and its controversial leader in action, and the insights he provides here reflect both his familiarity with the subject and his ability to remain an objective observer. From 1974 to the day Rickover retired in 1982, Francis Duncan had free access to files, documents, and personnel at every level of involvement, a rare, never to be repeated opportunity that most historians dream of but few get. And as this book clearly shows, he took full advantage of the situation to gain a unique understanding of exactly how the program operated. The result is a thorough, balanced record of what may well be the U.S. Navy's and the nation's most important and far-reaching project of the twentieth century. Knowing that facts and figures alone don't tell the entire story, Duncan talked to scores of people who dealt with day-to-day operations, watched men in prototype training, and then accompanied them to sea, visited civilian and naval installations, and had close contact with Rickover himself. He also interviewed former U.S. presidents' secretaries of the navy, chiefs of naval operations, AEC chairmen, and legislative leaders who kept tabs on the projects but were removed from daily activities. Never once, the author says, did the admiral attempt to interfere with his research, nor did Rickover read the manuscript. While the focus here is on the nuclear program, not the man, this book does provide fascinating insights into Rickover's personality and his efforts to maintain standards of excellence that would assure the program's safety and its ultimate success. Using one of the admiral's favorite terms, the discipline of technology, to demonstrate the method of technological application advocated by Rickover, Duncan effectively balances technical detail with astute analysis and even drama. Filled with information not found elsewhere, his study is a valuable chronicle of the development of submarine propulsion reactors, the loss of the Thresher, the struggle over the application of nuclear propulsion to surface fleet, and the use of the Shippingport Atomic Power Plant to illustrate the feasibility of a light water breeder reactor. **Rickover: The**

Struggle for Excellence Francis Duncan, 2021-06-17 Admiral Hyman G Rickover 1900-1986, the Father of the Nuclear Navy, was born Chaim Godalia Rickover in eastern Poland to Jewish parents fleeing Russian antisemitic pogroms in 1906. With his mother and sister, he joined his father, who had traveled to America since 1897, in New York City. The family soon moved to Chicago, where Rickover's father worked as a tailor. Congressman Adolph Sabath, a Czech Jewish immigrant, nominated Rickover for appointment to the US Naval Academy. Rickover passed the entrance exams and entered the Academy in 1918. After sea duty on several ships and submarines, he served as head of the Electrical Section in the Bureau of Ships and in 1946 was sent to Oak Ridge to start working on nuclear naval propulsion reactors, a program he would lead for the rest of his career. He became a four-star admiral in 1973. Rickover's work on nuclear propulsion had a profound effect on the post-World War II world and on the development of civilian nuclear reactors for electricity generation. His demand for excellence and

accountability was felt far beyond the naval community yet few other flag officers in the US Navy have been so controversial. Drawing on the admiral's private papers and the personal insights of friends and family members, this biography examines Rickover's extraordinary naval career and his private life. Francis Duncan, in his long-awaited full biography of Hyman Rickover, achieves that difficult dual goal of close personal insight and honesty of distance. Duncan details Rickover's many controversies, his towering rages, and his contempt for tradition, bureaucracy, and stupidity, a very readable cruise through the life of a notorious curmudgeon who, after all, served his country well and had a major impact on the ships of the U.S. Navy, on the engineering profession, and on the development of nuclear power in the United States.

Rodney Carlisle, *The Journal of American History*: This fine treatment of a remarkable man is highly recommended.

Malcolm Muir, Jr., *Technology and Culture*: Francis Duncan is uniquely qualified to write the biography of Admiral Hyman G. Rickover. He is the only person to whom Admiral Rickover ever made himself available for interviews and allowed use of his personal papers, including the letters between himself and his first wife, Ruth. This is an enjoyable book, especially for the thousands who served or serve now in the nuclear programs, civilian or military. It is also an important addition to the history of a man who was one of the giants of the twentieth century.

United States: Robert Loewenthal, *The Journal of Military History*: Victorious in his struggle for excellence, Rickover's personal baton of highly disciplined professionalism was passed without a hitch to those he had selected, educated, and trained to run nuclear power plants safely and efficiently. We still feel his presence; his legacy endures. This book does him long-awaited justice.

Admiral James D. Watkins, USN Ret., Chief of Naval Operations, 1982-86: Impressively researched, insightful, and readable, Duncan captures the Rickover behind the myths and sea stories. This account of his remarkable life and only in America story will appeal to a wide audience.

midshipman to CEO: Admiral Bruce DeMars, USN Ret., Director, Navy Nuclear Propulsion, 1988-96: This excellent book offers insights not available to previous authors who did not enjoy Francis Duncan's close association with Rickover and his family. Particularly useful are early chapters that define the character of the man.

Admiral Kinnard R. McKee, USN Ret., Director, Navy Nuclear Propulsion, 1982-88: This is the authentic biography of Hyman Rickover, one of the most influential persons in naval history and in the creation of an international civilian nuclear power industry. Duncan has given us a national treasure that is both authoritative and enjoyably readable. There's something in it for everyone.

Dr. Theodore Rockwell, former technical director of Rickover's naval reactors program: *Rickover: The Struggle for Excellence* is an original and absolutely fundamental contribution both to naval history and to a general understanding of nuclear power development. It is very objective and accessible. There is no comparable book.

Dr. Gary Weir, Naval Historical Center: I believe *Rickover: The Struggle for Excellence* by Francis Duncan is the best biography of Admiral Rickover.

Robert Rickover, son of Admiral Rickover: *Beyond Engineering*. Robert Pool, 1997-07-17. We have long recognized technology as a driving force behind much historical and cultural change. The invention of the printing press initiated the Reformation. The development of the compass ushered in the Age of Exploration, and the discovery of the New World. The cotton gin created

the conditions that led to the Civil War Now in Beyond Engineering science writer Robert Pool turns the question around to examine how society shapes technology Drawing on such disparate fields as history economics risk analysis management science sociology and psychology Pool illuminates the complex often fascinating interplay between machines and society in a book that will revolutionize how we think about technology We tend to think that reason guides technological development that engineering expertise alone determines the final form an invention takes But if you look closely enough at the history of any invention says Pool you will find that factors unrelated to engineering seem to have an almost equal impact In his wide ranging volume he traces developments in nuclear energy automobiles light bulbs commercial electricity and personal computers to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen forces For instance Pool explores the reasons why steam powered cars lost out to internal combustion engines He shows that the Stanley Steamer was in many ways superior to the Model T it set a land speed record in 1906 of more than 127 miles per hour it had no transmission and no transmission headaches and it was simpler one Stanley engine had only twenty two moving parts and quieter than a gas engine but the steamers were killed off by factors that had little or nothing to do with their engineering merits including the Stanley twins lack of business acumen and an outbreak of hoof and mouth disease Pool illuminates other aspects of technology as well He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road and perhaps most important he argues that with the increasing complexity of our technological advances from nuclear reactors to genetic engineering the number of things that can go wrong multiplies making it increasingly difficult to engineer risk out of the equation Citing such catastrophes as Bhopal Three Mile Island the Exxon Valdez the Challenger and Chernobyl he argues that is it time to rethink our approach to technology The days are gone when machines were solely a product of larger than life inventors and hard working engineers Increasingly technology will be a joint effort with its design shaped not only by engineers and executives but also psychologists political scientists management theorists risk specialists regulators and courts and the general public Whether discussing bovine growth hormone molten salt reactors or baboon to human transplants Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other

A
History of the Atomic Space Age and Its Implications for the Future Willis L. Shirk, 2018-02-12 The Atomic Space Age has been and continues to be an engine for future wealth creation Humanity stands on the verge of becoming an interplanetary species We know we are made of star stuff precisely because many of the isotopes in our bodies originated in the death throes of dying suns With the discovery of nuclear fission in 1938 mankind was for the first time able to glimpse both our distant past and our possible future As with the discovery of fire and agriculture thousands of years ago wind power hundreds of years ago and steam power and electricity in the nineteenth century we must now learn to tame this powerful new force locked within the heart of the atom Buckminster Fuller once observed that wealth is nothing more than energy

compounded by ingenuity Since mass energy can never decrease and ingenuity will only increase there is no limit to the quantity of wealth that our species can and will create using nuclear space propulsion

Rearming for the Cold War, 1945-1960 Elliott Vanveltner Converse, 2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods

History of Acquisition in the Department of Defense, Volume 1 Elliott V. Converse, 2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods The first roughly coinciding with President Truman's tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look's stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs

Risk-Based Thinking Tony

Muschara,2017-11-13 Society at large tends to misunderstand what safety is all about It is not just the absence of harm When nothing bad happens over a period of time how do you know you are safe In reality safety is what you and your people do moment by moment day by day to protect assets from harm and to control the hazards inherent in your operations This is the purpose of risk based thinking the key element of the six building blocks of Human and Organizational Performance H OP Generally H OP provides a risk based approach to managing human performance in operations But specifically risk based thinking enables foresight and flexibility even when surprised to do what is necessary to protect assets from harm but also achieve mission success despite ongoing stresses or shocks to the operation Although you cannot prepare for every adverse scenario you can be ready for almost anything When risk based thinking is integrated into the DNA of an organization s way of doing business people will be ready for most unexpected situations Eventually safety becomes a core value not a priority to be negotiated with others depending on circumstances This book provides a coherent perspective on what executives and line managers within operational environments need to focus on to efficiently and effectively control learn and adapt

Deciding to Buy Quentin E. Hodgson,2010 The development and procurement of major weapons programs in the United States is a complex and often drawn out process complicated by political considerations and often sharp disagreements over requirements and the merits of systems Secretaries of Defense since Robert McNamara have sought to impose discipline on the process with varying degrees of success Conflicts between a Military Service and the civilian leadership are inevitable A Service wants to develop the most advanced system to address its perceived need whereas the Secretary of Defense must balance competing requirements across the Department of Defense The military and the civilian leadership may also have different strategic perspectives that feed this conflict Through the detailed analysis of three case studies the Nuclear Surface Navy in the 1960s the B 1 Bomber in the 1970s and the Crusader Artillery System in the 2000s the author explores some of the common themes and sources of friction that arise in civil military relations concerning major weapons programs He concludes with some thoughts on how the Secretary of Defense can anticipate and reduce these sources of friction while retaining an environment that supports healthy debate P ix

warfare often overlooked in both the planning and execution of military operations factors that can turn certain success into devastating failure By definition the unforeseeable cannot be seen but one way to bring more variables under consideration when planning a military action is to review those instances where the unforeseeable changed everything For professionals and enthusiasts alike Imponderable But Not Inevitable Warfare in the 20th Century does just that reviewing specific instances in 20th century warfare when things did not go according to plan Imponderable but Not Inevitable uses case studies to expose the Inevitability Syndrome exploring the role of luck fate and randomness in influencing both victory and defeat In essays drawn from World War II Konfrontasi the Vietnam War and the Gulf War a distinguished set of military experts looks at real scenarios of inexplicable losses illustrating why nothing nothing should be taken for granted in war
