Vegetation Monitoring Caryl L. Elzinga, Angela G. Evenden, 1998-05 This annotated bibliography documents literature addressing the design and implementation of vegetation monitoring. It provides resources managers, ecologists, and scientists access to the great volume of literature addressing many aspects of vegetation monitoring: planning and objective setting, choosing vegetation attributes to measure, sampling design, sampling methods, statistical and graphical analysis, and communication of results. Over half of the 1400 references have been annotated. Keywords pertaining to the type of monitoring or method are included with each bibliographic entry. Keyword index.

Fungi in vegetation science W. Winterhoff, 2012-12-06 Readers will perhaps be surprised to find a volume about fungi within a handbook of vegetation science. Although fungi traditionally feature in textbooks on botany at least since Whittaker 1969, they have mostly been categorised as an independent kingdom of organisms or in contrast to the animal and plant kingdom as protista, together with algae and protozoa. More relevant for ecology than the systematic separation of fungi from plants is the different lifestyle of fungi, which in contrast to most plants live as parasites, saprophytes, or in symbiosis. Theoretical factors aside, there are also practical methodological considerations which favour the distinction between fungal and plant communities, as has been shown for example by D. Relfelt 1974. Despite their special position, the coenology of fungi has been dealt with in the handbook of vegetation science. It would be wrong to conclude that we underestimate the important differences between fungal and plant communities. The reasons for including the former are that mycocoenology developed from phytocoenology, the similarity of the methods and concepts still employed today, and the close correlation between fungi and plants in biocoenoses.

Vegetation Ecology Eddy van der Maarel, 2009-04-01 *Vegetation Ecology* is a comprehensive account of plant communities and their environments. Written by leading experts in their field from four continents, this up-to-date, innovative text covers the composition, structure, ecology, diversity, distribution, and dynamics of plant communities, with an emphasis on functional adaptations to the abiotic and biotic processes governing plant communities. It reviews the modern developments in vegetation ecology from a historical perspective, presents a coherent view on vegetation ecology, while integrating population ecology, dispersal biology, biotic interactions, herbivory, interactions with soil organisms, and ecosystem ecology, and tackles applied aspects of vegetation ecology, notably nature management, restoration ecology, and global change studies. Aimed at advanced undergraduates, graduates, and researchers in plant ecology, geography, forestry, and nature conservation, *Vegetation Ecology* takes an integrated, multi-disciplinary approach and will be welcomed as an essential reference for plant ecologists the world over.
