Design and Analysis in Chemical Research Roy L. Tranter, 2000 Recent years have seen massive changes in the tools and instrumentation available to chemists in the scale of databases linking the properties of pure materials solutions or other mixtures to molecular structure and in the sheer ability of chemists to collect data through automated data acquisition systems Despite these advances many chemists still apply only rudimentary data analysis techniques and remain unaware of the advances made in information extraction over the last decade or so This volume covers the principles of design and analysis in chemical research and development It is organised in chapters dealing with major activities and understanding is generated through large numbers of examples and practical applications relating to research and development chemistry Authors adopt a user friendly approach concentrating on principles and interpretation rather than formal derivation and proof A principal theme is that statistics and chemometrics which relies on statistics are essentially extensions of the logical processes used every day by chemists and that they bring greater understanding of problems more quickly and easily than purely intuitive methods A Reference List of Bibliographies, 1924 *Bibliographic Index*, 1997 *The British National Bibliography* Arthur James Wells, 1996 Indexed Bibliography of Office of Research and Development Reports Updated to January 1975 United States.
