Semantics Of Science:

Semantics as Science Richard K. Larson, 2022-11-22 An introductory linguistics textbook that takes a novel approach studying linguistic semantics as an exercise in scientific theory construction This introductory linguistics text takes a novel approach one that offers educational value to both linguistics majors and nonmajors Aiming to help students not only grasp the fundamentals of the subject but also engage with broad intellectual issues and develop general intellectual skills Semantics as Science studies linguistic semantics as an exercise in scientific theory construction Semantics offers an excellent medium through which to acquaint students with the notion of a formal axiomatic system that is a system that derives results from a precisely articulated set of assumptions according to a precisely articulated set of rules The book develops semantic theory through the device of axiomatic T theories first proposed by Alfred Tarski more than eighty years ago introducing technical elaboration only when required It adopts Japanese as its core object of study allowing students to explore and investigate the real empirical issues arising in the context of non English structures a non English lexicon and non English meanings The book is structured as a laboratory science text that poses specific empirical questions with 25 short units each of which can be covered in one class session The layout is engagingly visual designed to help students understand and retain the material with lively illustrations examples and quotations from famous scholars Semantics Michel Bréal, 1900 *Semantics* Stephen Ullmann, 1962 **The Semantics of Science** Roy Harris, 2005-04-15 The Semantics of Science proposes a radical new rethinking of science and scientific discourse Roy Harris argues that supercategories such as science art religion and history are themselves verbal constructs and thus language dependent Because each supercategory is constructed differently it is necessary to pay attention to the linguistic process by which a discourse such as science has developed Through this view it is possible to observe that the function of the supercategory is to integrate what would otherwise be separate activities and enquiries and the result of this integration is therefore a re drawing of the intellectual world that society as a whole adopts In the course of his study of The Semantics of Science Roy Harris looks at the history and development of scientific discourse to show through language that what is meant by science has changed since it was first theorised by the Greeks Harris traces the semantic development of science through the years of the Royal Society to the present day moving on to an analysis of rhetoric mathematics common sense and finally the supercategory of semantics This lucidly written yet radical new theory on the language of science will be fascinating reading for academics and students researching semantics semiotics or applied linguistics **Science and Sanity** Alfred Korzybski, 1958 , The Semantic Web in Earth and Space Science. Current Status and Future Directions T. Narock, P. Fox, 2015-07-14 The geosciences are one of the fields leading the way in advancing semantic technologies This book continues the dialogue and feedback between the geoscience and semantic web communities Increasing data volumes within the geosciences makes it no longer practical to copy data and perform local analysis Hypotheses are now being tested

through online tools that combine and mine pools of data This evolution in the way research is conducted is commonly referred to as e Science As e Science has flourished the barriers to free and open access to data have been lowered and the need for semantics has been heightened As the volume complexity and heterogeneity of data resources grow geoscientists are creating new capabilities that rely on semantic approaches Geoscience researchers are actively working toward a research environment of software tools and interfaces to data archives and services with the goals of full scale semantic integration beginning to take shape The members of this emerging semantic e Science community are increasingly in need of semantic based methodologies tools and infrastructure A feedback system between the geo and computational sciences is forming Advances in knowledge modeling logic based hypothesis checking semantic data integration and knowledge discovery are leading to advances in scientific domains which in turn are validating semantic approaches and pointing to new research directions We present mature semantic applications within the geosciences and stimulate discussion on emerging challenges and new research directions
