Sensing Issues In Civil Structural Health Monitoring:

Sensing Issues in Civil Structural Health Monitoring Farhad Ansari, 2005-07-14 Civil infrastructure systems are generally the most expensive assets in any country and these systems are deteriorating at an alarming rate. In addition, these systems have a long service life in comparison to most other commercial products. As well, the introduction of intelligent materials and innovative design approaches in these systems is painfully slow due to heavy reliance on traditional construction and maintenance practices and the conservative nature of design codes. Feedback on the state of the health of constructed systems is practically nonexistent. In the quest for lighter, stronger, and corrosion-resistant structures, the replacement of ferrous materials by high-strength fibrous ones is being actively pursued in several countries around the world, both with respect to the design of new structures as well as for the rehabilitation and strengthening of existing ones. In North America, active research in the design of new highway bridges is focused on a number of specialty areas, including the replacement of steel reinforcing bars in concrete deck slabs by randomly distributed low-modulus fibers and the replacement of steel prestressing cables for concrete components by tendons comprising super-strong fibers. Research is also being conducted on using FRPs to repair and strengthen existing structures.

Civil Structural Health Monitoring Carlo Rainieri, Giovanni Fabbrocino, Nicola Caterino, Francesca Ceroni, Matilde A. Notarangelo, 2021-08-24 This volume gathers the latest advances and innovations in the field of structural health monitoring as presented at the 8th Civil Structural Health Monitoring Workshop CSHM 8 held on March 31–April 2, 2021. It discusses emerging challenges in civil SHM and more broadly in the fields of smart materials and intelligent systems for civil engineering applications. The contributions cover a diverse range of topics, including applications of SHM to civil structures and infrastructures, innovative sensing solutions for SHM, data-driven damage detection techniques, nonlinear systems and analysis techniques, influence of environmental and operational conditions, aging structures and infrastructures in hazardous environments, and SHM in earthquake-prone regions. Selected by means of a rigorous peer-review process, they will spur novel research directions and foster future multidisciplinary collaborations.

Structural Health Monitoring of Civil Infrastructure Systems Vistasp M. Karbhari, Farhad Ansari, 2009-08-25 Structural health monitoring is an extremely important methodology in evaluating the health of a structure by assessing the level of deterioration and remaining service life of civil infrastructure systems. This book reviews key developments in research technologies and applications in this area of civil engineering. It discusses ways of obtaining and analysing data, sensor technologies, and methods of sensing changes in structural performance characteristics. It also discusses data transmission and the application of both individual technologies and entire systems to bridges and buildings. With its distinguished editors and international team of contributors, *Structural health monitoring of civil infrastructure systems* is a valuable reference for students in civil and structural engineering programs as well as those studying sensors, data analysis, and transmission at universities. It will also be an important source for practicing civil engineers and designers.
