Variational and Non-variational Methods in Nonlinear Analysis and Boundary Value Problems Dumitru Motreanu, Vicentiu D. Radulescu, 2013-06-29 This book reflects a significant part of authors research activity during the last ten years The present monograph is constructed on the results obtained by the authors through their direct cooperation or due to the authors separately or in cooperation with other mathematicians All these results fit in a unitary scheme giving the structure of this work The book is mainly addressed to

researchers and scholars in Pure and Applied Mathematics Mechanics Physics and Engineering We are greatly indebted to Viorica Venera Motreanu for the careful reading of the manuscript and helpful comments on important issues We are also grateful to our Editors of Kluwer Academic Publishers for their professional assistance Our deepest thanks go to our numerous scientific collaborators and friends whose work was so important for us D Motreanu and V Radulescu

IX Introduction The present monograph is based on original results obtained by the authors in the last decade This book provides a comprehensive exposition of some modern topics in nonlinear analysis with applications to the study of several classes of boundary value problems Our framework includes multivalued elliptic problems with discontinuities variational inequalities hemivariational inequalities and evolution problems The treatment relies on variational methods monotonicity principles topological arguments and optimization techniques Excepting Sections 1 and 3 in Chapter 1 and Sections 1 and 3 in Chapter 2 the material is new in comparison with any other book representing research topics where the authors contributed The outline of our work is the following

Numerical Modelling of Random Processes and Fields Vitalii Antonovich Ogorodnikov, 1996 Computer aided modelling is one of the most effective means of getting to the root of a natural phenomenon and of predicting the consequences of human impact on the environment General methods of numerical modelling of random processes have been effectively developed and the area of applications has rapidly expanded in recent years This book deals with the development and investigation of numerical methods for simulation of random processes and fields The book opens with a description of scalar and vector valued Gaussian models followed by non Gaussian models Furthermore issues of convergence of approximate models of random fields are studied The last part of this book is devoted to applications of stochastic modelling in which new application areas such as simulation of meteorological processes and fields sea surface undulation and stochastic structure of clouds are presented

Genetic Databases, 1999-09-01 Computer access is the only way to retrieve up to date sequences and this book shows researchers puzzled by the maze of URLs sites and searches how to use internet technology to find and analyze genetic data The book describes the different types of databases how to use a specific database to find a sequence that you need and how to analyze the data to compare it with your own work The content also covers sequence phenotype mutation and genetic linkage databases simple repetitive DNA sequences gene feature identification and prediction of structure and function of proteins from sequence information This book will be invaluable to those starting a career in life sciences research as well as to established researchers wishing to make full use of available resources Describes a wide range of databases DNA RNA protein pathways and gene expression Enables readers to access the information they need from databases on the web Includes a directory of URLs for easy reference Invaluable for those starting a career in life sciences research and also for established researchers wishing to make full use of available resources

Code of Federal Regulations, 1980 [Moscow Mathematical Olympiads, 2000-2005](#) Roman Vasil'evich Fedorov, Silvio Levy, Alexander Kovaldzhii, Ivan Yashchenko, 2011-09-13 The Moscow

Mathematical Olympiad has been challenging high school students with stimulating original problems of different degrees of difficulty for over 75 years. The problems are nonstandard; solving them takes wit, thinking outside the box, and sometimes hours of contemplation. Some are within the reach of most mathematically competent high school students, while others are difficult even for a mathematics professor. Many mathematically inclined students have found that tackling these problems or even just reading their solutions is a great way to develop mathematical insight. In 2006, the Moscow Center for Continuous Mathematical Education began publishing a collection of problems from the Moscow Mathematical Olympiads, providing for each an answer and sometimes a hint as well as one or more detailed solutions. This volume represents the years 2000–2005. The problems and the accompanying material are well suited for math circles. They are also appropriate for problem-solving classes and practice for regional and national mathematics competitions. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents, and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute, MSRI.

Nonlinear Oscillations of Hamiltonian PDEs Massimiliano Berti, 2007-10-01. Many partial differential equations (PDEs) that arise in physics can be viewed as infinite-dimensional Hamiltonian systems. This monograph presents recent existence results of nonlinear oscillations of Hamiltonian PDEs, particularly of periodic solutions for completely resonant nonlinear wave equations. The text serves as an introduction to research in this fascinating and rapidly growing field. Graduate students and researchers interested in variational techniques and nonlinear analysis applied to Hamiltonian PDEs will find inspiration in the book.
