ATTRACTION OF ARMATURE 227 Y armature This consists of a piece of soft iron in the shape of the letter Y If one of the Fig 90 branches of the fork be applied to the north pole of a horseshoe magnet as seen in Fig 90 the lower end of the armature and also the other branch of the fork acquire north polarity and will sustain small pieces of iron If both branches of the fork be applied one to each pole of the magnet as shown by the dotted lines in the cut the polarity of the lower end immediately disappears This is because the two poles tend to induce opposite polarities of equal intensity in the extremity of the armature which of course neutralize each other If the branches of the fork are applied to the similar poles of two magnets their influence will conspire in inducing the same polarity in the lower end and a greater weight will be supported by it than when one branch is applied to a single pole 228 When the two extremities of an iron bar are ected upon at once by both poles of a magnet there is a double induction and the effect is greatly increased Thus let N S Fig 91 be a compound U magnet and A an iron armature of such a length that while one end is
