Nutrient Regulation during Pregnancy, Lactation, and Infant Growth Lindsay Allen, Janet King, Bo Lönnerdal, 2013-11-22 Almost every aspect of energy and nutrient metabolism is altered by hormonal and other physiological changes during pregnancy and lactation While it is evident that hormonal adjustments affect nutrient requirements these are rarely considered when nutrient recommendations are made for pregnant or lactating women and often neglected during evaluation of nutritional status In addition changes in nutrient metabolism during the

stages of pregnancy and lactation are usually considered separately while in reality events during pregnancy can have a major influence on nutritional status and nutrient requirements during lactation. The purpose of this volume is to describe changes in the metabolism of important nutrients during pregnancy and lactation including the physiological basis for these changes and their implications for nutrient requirements and assessment. Authors have considered such issues as interrelationships between endocrine changes and nutrient metabolism at the tissue, cellular and molecular level; alterations in nutrient binding proteins; the efficiency of nutrient absorption and retention; and the impact on maternal as well as fetal nutritional status. Another unique aspect of this book is the focus on pregnancy and lactation as a continuum.

Micronutrients Intake and Status during Pregnancy and Lactation Louise Brough, Gail Rees, 2019-04-29 Optimal nutrition is important during pregnancy and lactation for the health of both the mother and infant Chronic deficiencies of both macronutrients and micronutrients are well established in developing countries Although in developed countries overconsumption of macronutrients is a major issue micronutrient deficiencies which occur concomitantly are no less of a concern Furthermore in developed countries there is also the risk of excessive micronutrient intake from dietary supplements Micronutrients have a role in fetal and neonatal health and also health in later life Micronutrient deficiency or toxicity during pregnancy or early life can permanently affect developing tissues resulting in adverse growth and development of the infant which is associated with chronic diseases in adulthood An aberrant micronutrient intake during pregnancy or lactation can also have detrimental effect on the mother both in the neonatal period and in later life
