Possible Palladian Villas George L. Hersey, Richard Freedman, 1992 Runs under MacOS 7 x only **Possible Palladian Villas** George L. Hersey, 1992 Drawing on Palladio's original published legacy of approximately 40 designs the authors attempt to reveal the rigorous geometric rules by which Palladio conceived these structures Using a computer they test each rule in every possible application *Possible Palladian Villas* George L. Hersey, Richard Freedman, 1992 Drawing on Palladio's original published legacy of approximately 40 designs the authors attempt to reveal the rigorous geometric rules by which Palladio conceived these structures Using a computer they test each rule in every possible application Niche Tactics Caroline O'Donnell, 2015-04-10 Niche Tactics aligns architecture's relationship with site with its ecological analogue the relationship between an organism and its environment Bracketed between texts on giraffe morphology ecological perception ugliness and hopeful monsters architectural case studies investigate historical moments when relationships between architecture and site were productively intertwined from the anomalous city designs of Francesco de Marchi in the sixteenth century to Le Corbusier's near eradication of context in his Plan Voisin in the twentieth century to the more recent contextualist movements Extensively illustrated with 140 drawings and photographs Niche Tactics considers how attention to site might create a generative language for architecture today **Architecture and Geometry in the Age of the Baroque** George L. Hersey, 2001-03 Explores the interrelations of architecture and geometry in the age of the Baroque explaining how the advancement of geometry and the abstractions of mathematics were used in the architecture of the era **The Routledge Companion to Creativity** Tudor Rickards, Mark A. Runco, Susan Moger, 2008-11-19 Creativity can be as difficult to define as it is to achieve This is a complex and compelling area of study and this volume is perfectly poised to explore how creativity can be better understood and used in a range of contexts The book not only centres on creativity in wider organizational theory but also defines the conditions in which creativity can flourish and assesses how the contemporary business environment has an impact on creative solutions The volume grounds the concept of creativity in a sound theoretical framework and explores issues of practical and theoretical consequence covering a range of themes including innovation and entrepreneurship creativity and design environmental influences knowledge management meta theories of creativity personal creativity structured interventions Comprising contributions written by an unusually wide array of leading creativity scholars The Routledge Companion to Creativity is an insightful and cutting edge resource It is an essential purchase for anyone with an interest in creativity from a business psychology or design perspective **D'Arcy Wentworth Thompson's Generative Influences in Art, Design, and Architecture** Ellen K. Levy, Charissa N. Terranova, 2021-03-11 Scottish zoologist D'Arcy Wentworth Thompson's visionary ideas in *On Growth and Form* continue to evolve a century after its publication aligning it with current developments in art and science Practitioners theorists and historians from art science and design reflect on his ongoing influence Overall the anthology links evolutionary theory to form generation in both

scientific and cultural domains It offers a close look at the ways cells organisms and rules become generative in fields often otherwise disconnected United by Thompson s original exploration of how physical forces propel and shape living and nonliving forms essays range from art art history and neuroscience to architecture design and biology Contributors explore how translations are made from the discipline of biology to the cultural arena They reflect on how Thompson s study relates to the current sciences of epigenesis self organization biological complex systems and the expanded evolutionary synthesis Cross disciplinary contributors explore the wide ranging aesthetic ramifications of these sciences A timeline links the history of evolutionary theory with cultural achievements providing the reader with a valuable resource

Grand Urban Rules

Alex Lehnerer,2009 Grand Urban Rules offers a compilation and discussion of significant rules invented and implemented by European North American and Asian cities The reader does not only get an overview of the functionality and repercussions of these rule sets but also gains insight into the context and situation of the specific city through the lens of rule based governance a citys code as the inverted abstracted and extracted image of a citys actual situation Setting standards is first and foremost a cultural act We map cities by their rules The publication is based on a database of approximately 100 relevant urban rules researched over the past three years at the ETH Zurich These rules describe built form with regard to physical characteristics qualities and consequences as well as the distribution of program density urban performance and aesthetics Publisher s description

Digital Intentions Explorations and Accidents ,2008-01-15 Digital design as seen on the following pages is no longer a discipline with a single visual signature redefining what is visually real but rather branches into a myriad of visual languages intellectual pursuits and experiential tones The frames that used to define digital

creativities even a decade ago are constantly being re framed Accordingly essays in this compilation were divided into four subject categories directing the reader s attention to various thematic readings This division reflects the ever growing richness and diversity of digitally created content However any categorization is a simplified convention that provides artificial boundaries The included projects cover broad conceptual visual and educational themes While each paper is internally consistent and coherent they often cross established boundaries and venture into the unknown Nexus Network Journal 10,2 Kim Williams,2008-12-16 This volume features a collection of papers dedicated to Canons of Form Making in honor of the 500th anniversary of the birth of architect Andrea Palladio 1508 1580 Theorist as well as practitioner Palladio s architecture was based on well defined canons that he had gleaned from studying the treatises as well as the remains of architecture from antiquity Palladio himself left to posterity not only his large corpus of built works but his Quattro libri d architettura Three of the papers in this issue are specifically about Palladio and his work The other papers deal with canons of form making ancient and contemporary **The Creative Mind** Margaret A. Boden,2004-02-24 This second edition of The Creative Mind has been updated to include recent developments in artificial intelligence with a new preface introduction and conclusion by the author Architecture and Mathematics from Antiquity to the Future Kim Williams,Michael J. Ostwald,2015-02-11 Every age and every culture has relied on the incorporation of mathematics in their works of architecture to imbue the built environment with meaning and order Mathematics is also central to the production of architecture to its methods of measurement fabrication and analysis This two volume edited collection presents a detailed portrait of the ways in which two seemingly different disciplines are interconnected Over almost 100 chapters it illustrates and examines the relationship between architecture and mathematics Contributors of these chapters come from a wide range of disciplines and backgrounds architects mathematicians historians theoreticians scientists and educators Through this work architecture may be seen and understood in a new light by professionals as well as non professionals Volume II covers architecture from the Late Renaissance era through Baroque Ottoman Enlightenment Modern and contemporary styles and approaches Key figures covered in this volume include Palladio Michelangelo Borromini Sinan Wren Wright Le Corbusier Breuer Niemeyer and Kahn Mathematical themes which are considered include linear algebra tiling and fractals and the geographic span of the volume s content includes works in the United States of America and Australia in addition to those in Europe and Asia Cognitive Technology J.L. Mey,B. Gorayska,1995-12-01 In this book the editors have gathered a number of contributions by persons who have been working on problems of Cognitive Technology CT The present collection initiates explorations of the human mind via the technologies the mind produces These explorations take as their point of departure the question What happens when humans produce new technologies Two interdependent perspectives from which such a production can be approached are adopted How and why constructs that have their origins in human mental life are embodied in physical environments when people fabricate their habitat even to the point of those constructs becoming that

very habitat How and why these fabricated habitats affect and feed back into human mental life The aim of the CT research programme is to determine in general which technologies and in particular which interactive computer based technologies are humane with respect to the cognitive development and evolutionary adaptation of their end users But what does it really mean to be humane in a technological world To shed light on this central issue other pertinent questions are raised e g Why are human minds externalised i e what purpose does the process of externalisation serve What can we learn about the human mind by studying how it externalises itself How does the use of externalised mental constructs the objects we call tools change people fundamentally To what extent does human interaction with technology serve as an amplification of human cognition and to what extent does it lead to a atrophy of the human mind The book calls for a reflection on what a tool is Strong parallels between CT and environmentalism are drawn both are seen as trends having originated in our need to understand how we manipulate by means of the tools we have created our natural habitat consisting of on the one hand the cognitive environment which generates thought and determines action and on the other hand the physical environment in which thought and action are realised Both trends endeavour to protect the human habitat from the unwanted or uncontrolled impact of technology and are ultimately concerned with the ethics and aesthetics of tool design and tool use Among the topics selected by the contributors to the book the following themes emerge the list is not exhaustive using technology to empower the cognitively impaired the ethics versus aesthetics of technology the externalisation of emotive and affective life and its special dialectic mirror effects creativity enhancement cognitive space problem tractability externalisation of sensory life and mental imagery the engineering and modelling aspects of externalised life externalised communication channels and inner dialogue externalised learning protocols relevance analysis as a theoretical framework for cognitive technology

Algorithmic Architecture Kostas Terzidis, 2006-08-14 Why does the word design owe its origin to Latin and not Greek roots Where do the limits of the human mind lie How does ambiguity enter the deterministic world of computation Who was Parmenides and why is his philosophy still puzzling today This unique volume challenges the reader to tackle all these complex questions and more Algorithmic Architecture is not a typical theory based architectural book it is not a computer programming or language tutorial book either It contains a series of provocative design projects and yet it is not just a design or graphic art book per se Following the tradition of architecture as a conglomeration of various design fields engineering theory art and recently computation the challenge of this book is to present a concept that like architecture is a unifying theme for many diverse disciplines An algorithm is not only a step by step problem solving procedure a series of lines of computer codes or a mechanistic linguistic expression but is also an ontological construct with deep philosophical social design and artistic repercussions Consequently this book presents many various and often seemingly disparate points of view that lead to the establishment of one common theme algorithmic architecture

Architecture, Liberty and Civic Order Carroll William Westfall, 2016-03-09 This book brings to light central topics that are neglected in current histories and

theories of architecture and urbanism These include the role of imitation in earlier centuries and its potential role in present practice the necessary relationship between architecture urbanism and the rural districts and their counterpart in the civil order that builds and uses what is built The narrative traces two models for the practice of architecture One follows the ancient model in which the architect renders his service to serve the interests of others it survives and is dominant in modernism The other first formulated in the fifteenth century by Leon Battista Alberti has the architect use his talent in coordination with others to contribute to the common good of a republican civil order that seeks to protect its own liberty and that of its citizens Palladio practiced this way and so did Thomas Jefferson when he founded a uniquely American architecture the counterpart to the nation s founding This narrative gives particular emphasis to the contrasting developments in architecture on the opposite sides of the English Channel The book presents the value for clients and architects today and in the future of drawing on history and tradition It stresses the importance indeed the urgency of restoring traditional practices so that we can build just beautiful and sustainable cities and rural districts that will once again assist citizens in living not only abundantly but also well as they pursue their happiness

Grammatical and Syntactical Approaches in Architecture: Emerging Research and Opportunities Lee, Ju Hyun, Ostwald, Michael J., 2019-12-20 Shape grammar and space syntax have been separately developed but rarely combined in any significant way The first of these is typically used to investigate or generate the formal or geometric properties of architecture while the second is used to analyze the spatial topological or social properties of architecture Despite the reciprocal relationship between form and space in architecture it is difficult to conceptualize a completed building without a sense of both of these properties the two major computational theories have been largely developed and applied in isolation from each another Grammatical and Syntactical Approaches in Architecture Emerging Research and Opportunities is a critical scholarly resource that explores the relationship between shape grammar and space syntax for urban planning and architecture and enables the creative discovery of both the formal and spatial features of an architectural style or type This book furthermore presents a new method to selectively capture aspects of both the grammar and syntax of architecture Featuring a range of topics such as mathematical analysis spatial configuration and domestic architecture this book is essential for architects policymakers urban planners researchers academicians and students

Arrival of the Fittest Andreas Wagner, 2015-10-06 Wagner draws on over fifteen years of research to present the missing piece in Darwin s theory Using experimental and computational technologies that were heretofore unimagined he has found that adaptations are not just driven by chance but by a set of laws that allow nature to discover new molecules and mechanisms in a fraction of the time that random variation would take

Amazon.com **Computational Creativity Research: Towards Creative Machines** Tarek R. Besold, Marco Schorlemmer, Alan Smaill, 2014-12-04 Computational Creativity Concept Invention and General Intelligence in their own right all are flourishing research disciplines producing surprising and captivating results that continuously influence and change

our view on where the limits of intelligent machines lie each day pushing the boundaries a bit further By 2014 all three fields also have left their marks on everyday life machine composed music has been performed in concert halls automated theorem provers are accepted tools in enterprises R D departments and cognitive architectures are being integrated in pilot assistance systems for next generation airplanes Still although the corresponding aims and goals are clearly similar as are the common methods and approaches the developments in each of these areas have happened mostly individually within the respective community and without closer relationships to the goings on in the other two disciplines In order to overcome this gap and to provide a common platform for interaction and exchange between the different directions the International Workshops on Computational Creativity Concept Invention and General Intelligence C3GI have been started At ECAI 2012 and IJCAI 2013 the first and second edition of C3GI each gathered researchers from all three fields presenting recent developments and results from their research and in dialogue and joint debates bridging the disciplinary boundaries The chapters contained in this book are based on expanded versions of accepted contributions to the workshops and additional selected contributions by renowned researchers in the relevant fields Individually they give an account of the state of the art in their respective area discussing both theoretical approaches as well as implemented systems When taken together and looked at from an integrative perspective the book in its totality offers a starting point for a re integration of Computational Creativity Concept Invention and General Intelligence making visible common lines of work and theoretical underpinnings and pointing at chances and opportunities arising from the interplay of the three fields
