## **Return Of The Brown Pelican:**

Brown Pelican Rien Fertel, 2022-09-07 In this compelling book Rien Fertel tells the story of humanity's complicated and often brutal relationship with the brown pelican over the past century. This beloved bird with the mythically bottomless belly to say nothing of its prodigious pouch has been deemed a living fossil and the most dinosaur-like of creatures. The pelican adorns the Louisiana state flag, serves as a religious icon of sacrifice, and stars in the famous parting shot of Jurassic Park but most significantly spotlights our tenuous connection with the environment in which it flies, feeds, and roosts the coastal United States. In 1903 Theodore Roosevelt inaugurated the first national wildlife refuge at Pelican Island, Florida, in order to rescue the brown pelican among other species from the plume trade. Despite such protections, the ubiquity of synthetic agents of death, most notably DDT in the mid-twentieth century, sent the brown pelican to the list of endangered species. By the mid-1960s, not one viable pelican nest remained in all of Louisiana. Authorities declared the state bird locally extinct. Conservation efforts, including an outlandish but well-planned birdnapping, saved the brown pelican, generating one of the great success stories in animal preservation. However, the brown pelican is once again under threat, particularly along Louisiana's coast due to land loss and rising seas. For centuries, artists and writers have portrayed the pelican as a bird that pierces its breast to feed its young, symbolizing saintly piety. Today, the brown pelican gives itself in other ways, sacrificed both by and for the environment as a bellwether bird, an indicator species portending potential disasters that await. Brown Pelican combines history and first-person narrative to complicate, deconstruct, and reassemble our vision of the bird, the natural world, and ourselves.

**Draft EIS**, 1987      **The Peregrine Returns** Mary Hennen, 2017-07-21 Peregrine falcons have their share of claims to fame. With a diving speed of over two hundred miles per hour, these birds of prey are the fastest animals on earth or in the sky, and they are now well known for adapting from life on rocky cliffs to a different kind of mountain: modern skyscrapers. But adaptability only helps so much. In 1951, there were no peregrines left in Illinois, for instance, and it looked as if the species would be wiped out entirely in North America. Today, however, peregrines are flourishing. In The Peregrine Returns, Mary Hennen gives wings to this extraordinary conservation success story. Drawing on the beautiful watercolors of Field Museum artist in residence Peggy Macnamara and photos by Field Museum research assistant Stephanie Ware, as well as her own decades of work with peregrines, Hennen uses a program in Chicago as a case study for the peregrines' journey from their devastating decline to the discovery of its cause: a thinning of eggshells caused by a by-product of DDT. Through to recovery, revealing how the urban landscape has played an essential role in enabling falcons to return to the wild and how people are now learning to live in close proximity to these captivating raptors. Both a model for

conservation programs across the country and an eye opening look at the many creatures with which we share our homes this richly illustrated story is an inspiring example of how urban architecture can serve not only our cities human inhabitants but also their wild ones
