Return Of Scarcity:

The Return of Scarcity Herbert Cole Coombs,1990-06-11 The essays in this 1990 book link widely shared environmental concerns to an original and penetrating analysis of contemporary economic trends Structuring European Private Equity

Iggy Bassi,Jeremy Grant,2006 This book describes LP allocation strategies to funds fund structures investment strategies performance measurement and governance at the fund and portfolio level **The Return of Scarcity** Herbert Cole

Coombs,1990-06-11 The essays in this 1990 book link widely shared environmental concerns to an original and penetrating analysis of contemporary economic trends **Remaking Scarcity** Costas Panayotakis,2011-09-12 The dominant schools of

neoclassical and neoliberal economics tell us that material scarcity is an inevitable product of an insatiable human nature Against this Costas Panayotakis argues that scarcity is in fact a result of the social and economic processes of the capitalist

system The overriding importance of the logic of capital accumulation accounts for the fact that capitalism is not able to make a rational use of scarce resources and the productive potential at the disposal of human society Instead capitalism produces grotesque inequalities and unnecessary human suffering a toxic consumerist culture that fails to satisfy and a deepening ecological crisis Remaking Scarcity is a powerful challenge to the current economic orthodoxy It asserts the core principle of economic democracy that all human beings should have an equal say over the priorities of the economic system as the ultimate solution to scarcity and ecological crisis *Organizations, Individualism and Economic Theory* Maria

Brouwer,2012-08-21 Most economic theory is based on the assumption that economies grow in a linear fashion Recessions depressions and financial crises are explained by policy mistakes However economic development has historically been uneven and this state of affairs continues today This book argues that twentieth century economic theory has marginalized individualism and organizational variety and puts forward the case for a pluralist approach This book represents a unique synthesis of business theory and economic theory which pinpoints the problems with many current mainstream theories and sets out new agendas for research Here Maria Brouwer argues that market competition is not about adapting to changes from outside but is driven by human motivation and goal directed behavior This gives managerial skills which do not traditionally have a significant place in mainstream economic theory a key role It also highlights the need for organizations that have a motivational culture and appreciate human capital This differs from the traditional view of the firm as a production function dictated by technology Brower argues that organizations should be depicted as voluntary associations of people that pursue goals of their own while firms compete on markets where relative performance determines their fate This argument builds on older theories of innovation and market competition that live on in business school curricula and paints a picture of an economy directed by individuals and firms This signals a bold departure from standard economic thinking

Real Love Andrew Ross,2013-11-05 In Real Love Andrew Ross one of our preeminent social critics explores the vital connection between economic life and cultural expression From the consequences of cyberspace for work and play to the

uses and abuses of genetics in the O J trial from world scarcity to world music Ross interrogates the cultural forms through which economic forces take their daily toll upon our communities and environment Examining the effects of debates about race technology ecology and the arts on social and legal change Ross focuses in particular on how demands for certain forms of cultural justice often go hand in hand with injustices of other sorts and shows why cultural politics are a real and inescapable part of any argument for social change *The Return to Increasing Returns* James M. Buchanan, Yong J. Yoon, 1994

Makes available important articles on increasing returns as related to the size of the economy **Advances in Financial Planning and Forecasting (New Series) Vol 6** Cheng F. Lee, Alice C. Lee, 2015-01-01 Advances in Financial Planning and Forecasting New Series is an annual publication designed to disseminate developments in the area of financial analysis planning and forecasting The publication is a forum for statistical quantitative and accounting analyses of issues in financial analysis and planning in terms of finance accounting and economic data **Marx and Living Labour** Laurent Baronian, 2013-05-29

From his early economic works on Marx conceived the labour of any kind of society as a set of production activities and analysed the historical modes of production as specific ways of distributing and exchanging these activities Political economy on the contrary considers the labour only under the form of its product and the exchange of products as commodities as the unique form of social labour exchange For Marx insofar as the labour creating value represents a specific mode of exchanging the society's living labour general and abstract labour cannot not only be defined as the substance or measure unit of the commodity as in Smith or Ricardo but foremost as an expense of living labour i.e. of nerves muscles brain etc Hence the twofold nature of living labour as a concrete activity producing a use value and an expense of human labour in general producing exchange value Marx himself claimed that this twofold nature of labour creating value was its main and most important contribution to economic science This book aims at showing how both determines the original categories and economic laws in Capital and constitutes the profound innerspring of Marx's critique of political economy The role and function of living labour is highlighted by dealing with the difference between Marx and Classics theories of labour value money and the problems of its integration in economic analysis especially in Keynes the transition from feudalism to capitalism the theory of capital through a discussion on the Cambridge controversy and the transformation problem the labour process and the principles of labour management unemployment and overpopulation the formulas of capital in the history of economic thought finally an interpretation of the current crisis based on Marx's conception of overaccumulation and speculation after having distinguished it from underconsumption and stagnation theories of crises *Economics, Natural-Resource Scarcity and Development (Routledge Revivals)* Edward B. Barbier, 2013-06-26 Global warming is an increasing problem tropical forests are being wiped out and major upper watersheds are being degraded Using insights provided by environmentalism ecology and thermodynamics this book first published in 1989 outlines an economic approach to the use of natural resources and particularly to the problem of

environmental degradation Edward Barbier reviews and critiques the long past of environmental and resource economics and then goes on to elaborate an economics which allows us to develop alternative strategies for dealing with the problems faced With examples drawn from Latin America and Indonesia he not only develops a major theoretical advance but shows how it can be applied Barbier's work is an important and relevant contribution to the discussion surrounding the economics of environmental sustainability

Risk and Hyperconnectivity Andrew Hoskins, John Tulloch, 2016-05-02 Risk and Hyperconnectivity brings together for the first time three paradigms new risk theory neoliberalization theory and connectivity theory to illuminate how the kaleidoscope of risk events in the opening years of the new century has recharged a neoliberal battlespace of media economy and security Hoskins and Tulloch argue that hyperconnectivity is both a conduit of risk and a form of risk in itself and that it alters the ways in which we experience events and remember them Through interdisciplinary dialogue and case study analysis they offer original perspectives on the key questions of risk of our age including What is the path to a balance between individual privacy and state or corporate security Is hyperconnectivity itself a new risk condition of our time How do remembering and forgetting shape citizen insecurity and cultures of risk and legitimize neoliberal governance How do journalists operate as public intellectuals of risk Through probing a series of risk events that have already scarred the twenty first century Hoskins and Tulloch show how both established and emergent media are central in shaping past present and future horizons of neoliberalism while also propelling wide pressure for its alternatives on those ranging from economics students worldwide to potential political leaders cultivated by austerity policies

The Economics of John Maynard Keynes Fabio Terra, 2023-04-03 Widely recognized as one of the greatest economists in history there has been a surge of interest in the work of John Maynard Keynes since the financial crisis of 2008 with people looking for solutions to rebalance the economy Presciently Keynes argued that free markets are unable to fully organize economic activity and that the steadying and reforming hand of the State is needed for capitalism to function properly In the aftermath of the financial crisis of 2008 exacerbated by a global pandemic these ideas are more timely than ever This book provides an introduction to Keynes thoughts on capitalism the State and macroeconomics It starts with Keynes epistemological theory of his *A Treatise on Probability* 1921 from which aspects such as uncertainty and the decision making process both later important in his economic work can be drawn The book then pursues Keynes economic writings From *A Tract on the Monetary Reform* 1923 and *A Treatise on Money* 1930 it shows Keynes pursuit of a full understanding of the role of money in the economy Keynes masterfully demonstrated the knowledge he gained through his 1936 masterpiece *The General Theory of Employment Interest and Money* Going beyond Keynes classic this book also explores his later work on economic policy prescriptions and finally his concept of State and economic development This accessible introduction to the economic thought of Keynes will be essential reading for those interested in the history and development of economics as well as political scientists sociologists historians and others seeking an overview of these foundational economic ideas

The Philosophy of Money Georg Simmel, 2011-04-01 A classic of twentieth century sociology that has reprinted many times and become a landmark text With its insights into the fetishisation of money and the impact of extremes of wealth and poverty it is now seen as prophetic in a credit driven globalised world economy Anticipates many of the insights of later theorists such as Habermas Baudrillard and Zizek Foresess the links between money and the growth of cities and urbanisation New foreword by Charles Lemert

A New Model of the Economy Brian Hodgkinson, 2008-04-01 Presenting a radical revision of modern economic theory this analysis adjusts the entire range of economic thought in relation to the fundamental part played by land the significance of credit especially in the banking system and the crucial impact of the taxation method The resulting system based upon natural law economic security for all fair distribution of output and the opportunity for self fulfillment through work draws upon the masters of economic thought from Smith and Ricardo to Marshall Schumpeter and Keynes but also provides new insights by highlighting concepts often omitted from current studies of their works

Capitalism, in Spite of it All Edwin C. Sims, 1989 First Published in 1989 Routledge is an imprint of Taylor Francis an informa company

Measuring and Apportioning Rents from Hydroelectric Power Developments Mitchell P. Rothman, 2000-01-01 Hydro resources are provided by nature The exploitation of such resources can generate significant economic rent to the owners In the past governments have usually claimed ownership of hydroelectric resources and passed on the rents to their state owned utilities which have used them to expand their systems or provide lower tariffs to their consumers With the restructuring of the electric power sector in many countries a more explicit consideration of hydroelectric rents is required Moreover hydropower resources are often owned by more than one party or at least require cooperation between parties to develop them In this context the measurement and apportionment of hydropower rents between cooperating parties becomes important This paper addresses some of the issues involved in cooperative development of water resources especially for hydroelectric generation It promotes a better understanding of the sources of the benefits and attempts to derive an analytical basis for discussions between cooperating parties This volume will be of interest to hydropower resource earning countries hydropower developers and Bank staff

Distortions to Agricultural Incentives in Asia Kym Anderson, Will Martin, 2009-02-04 The vast majority of the world s poorest households depend on farming for their livelihoods During the 1960s and 1970s most developing countries imposed pro urban and anti agricultural policies while many high income countries restricted agricultural imports and subsidized their farmers Both sets of policies inhibited economic growth and poverty alleviation in developing countries Although progress has been made over the past two decades to reduce those policy biases many trade and welfare reducing price distortions remain between agriculture and other sectors and within the agricultural sector of both rich and poor countries Comprehensive empirical studies of the disarray in world agricultural markets appeared approximately 20 years ago Since then the Organisation for Economic Co operation and Development had provided estimates each year of market distortions in high income countries but there have

been no comparable estimates for the world's developing countries. This volume is the third in a series; other volumes cover Africa, Europe's transition economies, and Latin America and the Caribbean that not only fills that void for recent years but extends the estimates in a consistent and comparable way back in time and provides analytical narratives for scores of countries that shed light on the evolving nature and extent of policy interventions over the past half century. *Distortions to Agricultural Incentives in Asia* provides an overview of the evolution of distortions to agricultural incentives caused by price and trade policies in the 12 largest economies of East and South Asia. Together, these countries constitute more than 95 percent of the region's population, agricultural output, and overall GDP. Sectoral trade and exchange rate policies in the region have changed greatly since the 1950s, and there have been substantial reforms since the 1980s, most notably in China and India. Nonetheless, numerous price distortions in this region remain, and others have added in recent years. The new empirical indicators in these country studies provide a strong evidence-based foundation for assessing the successes and failures of the past and for evaluating policy options for the years ahead.

Economics Patrick J. Welch, Gerry F. Welch, 2016-02-29 *Economics Theory Practice* 11th Edition by Patrick J. Welch and Gerry F. Welch connects theory to the practice of economics and the everyday world through examples and applications, debates, and critical thinking cases, some that are classics in the field and others that are fresh and up to date. Its balanced coverage of microeconomics and macroeconomics, flexibility in topic coverage, order, and the use of appendices and chapter sections to shorten or deepen course material offer a choice of levels and sequences for a course.
