Advanced Radio Frequency Identification Design and Applications Dan Hallmen, 2016-04-01

Radio Frequency Identification (RFID) technology uses communication through radio waves for exchanging data between the reader and the electronic tag attached to an object for the purpose of tracking and identification. RFID is one method for Automatic Identification and Data Capture (AIDC). A radio frequency identification system uses tags or labels attached to the objects to be identified. Two-way radio transmitter/receivers called interrogators or readers send a signal to the tag and read its response. RFID tags can be either passive, active, or battery-assisted passive. An active tag has an on-board battery and periodically transmits its ID signal. A battery-assisted passive (BAP) has a small battery on board and is activated when in the presence of an RFID reader. A passive tag is cheaper and smaller because it has no battery; instead, the tag uses the radio energy transmitted by the reader. However, to operate a passive tag, it must be illuminated with a power level roughly a thousand times stronger than for signal transmission. That makes a difference in interference and in exposure to radiation. The tags contain electronically stored information. Passive tags collect energy from a nearby RFID reader's interrogating radio waves. Active tags have a local power source such as a battery and may operate at hundreds of meters from the RFID reader. Unlike a barcode, the tag need not be within the line of sight of the reader, so it may be embedded in the tracked object. RFID tags are used in many industries; for example, an RFID tag attached to an automobile during production can be used to track its progress through the assembly line. RFID-tagged pharmaceuticals can be tracked through warehouses, and implanting RFID microchips in livestock and pets allows positive identification of animals. This book, entitled *Advanced Radio Frequency Identification Design and Applications*, emphasizes the advances in RFID tag antenna and ASIC design, novel chipless RFID tag design, security protocol enhancements, along with some novel applications of RFID.

Radio Frequency Identification Technologies National Research Council, Division on Engineering and Physical Sciences, Computer Science and

Telecommunications Board, Committee on Radio Frequency Identification Technologies, 2005-01-29 Radio Frequency Identification RFID technology is gaining rapid acceptance as a means to track a wide array of manufactured objects. Currently RFID technologies have shown promise in transportation e.g. smart fare cards and commerce e.g. inventory control for a variety of uses and are likely to find many new applications in both military and civilian areas if and when current technical issues are resolved. There are a number of policy concerns e.g. privacy however that will become more crucial as the technology spreads. This report presents a summary of a workshop held by the NRC at the request of the Defense Advanced Research Projects Agency to explore many of the key technical and policy issues. Several important themes that are likely to govern expansion of RFID technology emerged from the workshop and are discussed.

Radio Frequency Identification (RFID) in der Automobilindustrie Sebastian Weigert, 2007-11-09 Sebastian Weigert analysiert den Einsatz der RFID Technologie anhand des Beispiels der Automobilindustrie. Ziel ist der Entwurf eines Zukunftsbildes, das den Einsatz von RFID in einem fünf bis Zehnjahreszeitraum beleuchtet. Aktuelle Trends im RFID Umfeld werden dabei ebenso berücksichtigt wie die technologische Weiterentwicklung von RFID zu RFID Sensorik.

Radio Frequency Identification Paulo Crepaldi, Tales Pimenta, 2017-11-29 Radio frequency identification RFID is one of the modern names that is becoming increasingly popular as a result of many years of researches and investigations. Powerful hardware and software tools have contributed and still do to place the radio frequency identification as a popular and widely used technology from large corporations to individuals and custom applications. Although RFID offers many advantages over other technologies, it is essential to be aware of its limitations. Therefore, it will be possible to overcome the limitations and to increase its applications. As an example, cost, safety, security, transmissions formats and international standards are important merit figures of continuous improvement. In this book, we present important proposals that will certainly contribute to the evolution of RFID. Theoretical and practical aspects are presented and discussed by the authors, and thus we invite everyone for a pleasant reading.
