

Medical treatment of acute episodes of rheumatic fever

Rachel Snitcowsky

From the Department of Pediatric Cardiology, Instituto do Coração, Hospital das Clínicas, Universidade de São Paulo, São Paulo

Key words: Streptococcal infection; acute rheumatic fever; medical treatment; gallium-67 imaging

To date, and to the best of our knowledge, investigators have been unable to understand precisely the pathophysiology of the nonsuppurative sequels of streptococcal infection of the upper respiratory tract, thus making the clinical and the laboratory diagnosis of acute rheumatic fever very difficult.¹ To establish an effective therapeutic regimen, it is essential to have a correct diagnosis, as well as an adequate understanding of the mechanisms of the disease. The difficulties in achieving such a correct diagnosis in rheumatic fever are many, mostly related to differential diagnosis of pure polyarthrititis and the presence of recurrent carditis. From the clinical standpoint, the modified Jones criteria² are largely accepted, but are the source of a long list of criticisms. Laboratory tests also are not conclusive. Because of all these difficulties, therapy may frequently be given inadvisably, or insufficiently. My purpose, therefore, is to review the medical treatment of acute episodes of rheumatic fever. At the same time, I will discuss some diagnostic methods, rarely mentioned, which might permit clarification of the correct diagnosis.

Protocol for diagnosis

At our institution, all patients with a possible episode of acute rheumatic fever are evaluated according to a protocol which includes a complete clinical and laboratory work-up.

The blood tests include complete counts of the different cells and measurements of erythrocytic sedimentation rate,

C-reactive protein, serum mucoprotein, serum protein electrophoresis, and streptococcal antibodies. The curve of levels of serum mucoprotein demonstrates the course of the inflammatory status, with a return to normal values demonstrating the suppression of rheumatic inflammation. We pay particular attention to the mucoprotein levels, and also to the cardiac uptake of gallium-67. Return to normal levels of mucoprotein is related to the absence of cardiac uptake of gallium-67.

The use of gallium-67 for diagnostic purposes began with the identification of rejection following heart transplantation.³ This experience was subsequently used to identify active myocarditis.⁴ To my eyes, rheumatic fever is just as great an immunogenic disease as is rejection after heart transplantation or active myocarditis. We are now using the same protocol for use of gallium-67 to detect cardiac involvement in acute rheumatic fever and, thus far, the results are very convincing.⁵ The diagnosis is completed with the electrocardiogram, chest x-ray and cross-sectional and Doppler echocardiography.

The other manifestations of acute rheumatic fever besides carditis usually disappear without sequels. Cardiac involvement, in contrast, leaves important sequels in terms of disease of the cardiac valves and in the myocardium. Because of this, special attention is required to provide appropriate treatment. An effective protocol for treatment, therefore, must be established immediately in all patients suspected of having cardiac involvement. Rare patients can develop such severe valvar and myocardial involvement that heart failure or cardiogenic shock may ensue and treatment in the intensive care unit will be required.

On the other hand, some diagnostic doubts could remain in patients with borderline manifestations of acute rheumatic fever. In these cases, it is preferable to recommend bed rest until the laboratory and clinical evidence

Pediatric cardiology is celebrating in the 1990s the 50th anniversary of the beginnings of the age of therapy. This informal history describes how the discipline grew from the era of pathologic anatomy to the dawn of therapy, the beginnings of closed heart surgery between 1939 and 1945. That dawn ushered in a remarkable half century of change and growth leading from clinicophysiology correlations through the start of open heart surgery in the 1950s. The text celebrates some of the achievements of this vivid and heroic age and describes how in the mid 1970s new surgical and medical approaches including prostaglandins and Doppler echocardiography led to successful cardiac treatment in infancy, the infant era. Interventional cardiology and the study of childhood arrhythmias began. Now in the 1990s a new era emphasising molecular biology and cardiac development is growing from the tools and concepts of the past. The four eras have focused on pathologic anatomy, clinicophysiology correlations and surgery, heart problems in infancy, and now the developing heart. In each era there have been advances in the four domains of pediatric cardiology: the heart before birth, the normal heart, heart disease and defects, and preventive cardiology. Growth in knowledge has been both episodic and dramatic, yet not a picture of unalloyed achievement. The later chapters discuss some of the problems beginning to be recognised in the new and current developmental era. The pioneers of pediatric cardiology, both men and women, are more than eponyms for each used in new and original ways; the tools and concepts available in their era. The interaction of tools and concepts is a theme in this book. Just as the tool of the stethoscope was vital in delineating the clinical profile of ventricular septal defect and patent ductus, the fluoroscope played a role in developing the concept of the Blalock-Taussig shunt. Pioneers also include patients and their families, and the book includes some discussion of what little is known of childhood and of the child with heart disease in the four different eras. This is a brief overview of the growth of knowledge of children's hearts from before William Harvey until our own time and includes references to histories of cardiac surgery and to collections of classic cardiac papers. By its emphasis on the child as the central historic figure and on the interaction of tools and concepts in the growth of knowledge
