Rhythms of Resistance and Resilience Maurice Jackson,2025-01-04 In the nation s capital music and sports have always played a central role in the lives of African Americans and have often served as a barometer for social conflict and social progress Sports clubs and ball games jam sessions and concerts have served to entertain and to enlighten to encourage and to at times offer a means of escape from the harsh realities of everyday life Along the way many Black people have used their skills and their determination to learn and develop their crafts in music and sports to earn meaningful careers by using their creative genius to improve their lot to cope with day to day racism to be a credit to their communities and to bring joy to those who watched them perform their craft In this book Maurice Jackson tells the story of these musicians and athletes He begins with pioneers such as Will Marion Cook who formed the first musicians union in the city and fought as a member of the Harlem Hellfighters in World War I Jackson takes the story down to giants of the twentieth century like John Thompson Jr After winning the NCAA basketball championship as coach of the Georgetown Hoyas Thompson said I m not interested in being the first or only black coach to do anything because that implies that I m also the first with the ability Jackson shows that Thompson stands in a long line of Black athletes and musicians who found in sports and music spaces to combat racial prejudice and bring people in the District together

*Carnival Art, Culture and Politics* Michaeline Crichlow,2013-09-13 Drawing on rich insights from cultural post structural and postcolonial studies this book demands that we rethink Carnival and the carnivalesque as not just celebratory moments or even as critical subtext but also as insightful performatives of social life anywhere given the entangled times and spaces of these performances The authors review Carnival s performative aspects not merely as a calendrical festival but rather center attention on the relationship between carnival and everyday life and on how people negotiate their social spaces and possibilities in the context of modern power The book therefore seeks to highlight the knotted time spaces of power and to demonstrate the dynamic interplay between state spaces and people s spaces that are being weaved by carnival s interlocutors It demonstrates how Carnival and the Carnavalesque become analytic optics through which the relations of power in the social and political life of subjects who seek to tacitly or strategically vary their given identities can be productively engaged This book was originally published as a special issue of Social Identities Journal for the Study of Race Nation and Culture

Rhythms in Physiological Systems Hermann Haken,Hans P. Koepchen,2012-12-06 Rhythms are a basic phenomenon in all physiological systems They cover an enormous range of frequencies with periods from the order of milliseconds up to some years They are described by many disciplines and are investigated usually in the context of the physiology of the respective function or organ The importance given to the research on rhythmicity is quite different in different systems In some cases where the functional significance is obvious rhythms are at the center of interest as in the case of respiration or locomotion In other fields they are considered more or less as interesting epiphenomena or at best as indicators without essential functional significance as in the case of cardiovascular or EEG rhythms Recently the study of physiological rhythms has attracted growing interest in several fields especially with respect to rhythm research in humans and its rapidly spreading applications in basic behavioral research and as a diagnostic tool in clinical medicine This development was favored by two methodological and conceptual advances on the one hand the availability of non invasive methods of continuous recording of physiological parameters and their computer assisted evaluation and on the other the rapid development of theoretical analyses for example the understanding of dynamic systems the generation of coordinated macroscopic processes in systems comprising many single elements and the mathematical tools for treating nonlinear oscillators and their mutual coupling
