Rice Cycle The Grain That Created A Cult:

Where Hornbills Fly Erik Jensen, 2010-11-30 Once headhunters under the rule of White Rajahs and briefly colonised before independence within Malaysia the Iban Dayaks of Borneo are one of the world's most extraordinary indigenous tribes possessing ancient traditions and a unique way of life As a young man Erik Jensen settled in Sarawak where he lived with the Iban for seven years learning their language and the varied rites and practices of their lives He was also witness to the great and often shattering changes they faced then and continue to face today The plentiful harvests abundant game and rivers teeming with fish of their remembered past have long since disappeared destroyed by restrictions on settlement and ironically by forest conservation The Iban's animist beliefs are slowly being replaced by the imported religions of Christianity and Islam and their traditional ways by modern schooling and medicine In this compelling and beautifully wrought memoir Erik Jensen reveals the challenges facing the Iban as they adapt to another century whilst fighting to preserve their identity and singular place in the world Haunting yet hopeful Where Hornbills Fly opens a window onto a vanishing world and paints a remarkable portrait of this fragile tribe which continues to survive deep in the heart of Borneo

Shifting Cultivation and Environmental Change

Malcolm F. Cairns, 2015-01-09 Shifting cultivation is one of the oldest forms of subsistence agriculture and is still practised by millions of poor people in the tropics Typically it involves clearing land often forest for the growing of crops for a few years and then moving on to new sites leaving the earlier ground fallow to regain its soil fertility This book brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Some critics have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However the book shows that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment and local communities The book focuses on successful agricultural strategies of upland farmers particularly in south and south east Asia and presents over 50 contributions by scholars from around the world and from various disciplines including agricultural economics ecology and anthropology It is a sequel to the much praised Voices from the Forest Integrating Indigenous Knowledge into Sustainable Upland Farming RFF Press 2007 but all chapters are completely new and there is a greater emphasis on the contemporary challenges of climate change and biodiversity conservation
