Ecologically Based Weed Management Nicholas E. Korres,Ilias S. Travlos,Thomas K. Gitsopoulos,2023-12-27

Ecologically Based Weed Management Protect crop yields and strengthen ecosystems with this essential guide Research into weed management is an increasingly critical component of both environmental stewardship and food production The

potential cost of weed propagation can be measured in crop yield reductions under nourished populations stymied economies and more The propagation of herbicide resistant weed populations means that purely chemical weed management is no longer viable food production can now be secured only with an ecological approach to weed control Ecologically Based Weed Management details such approaches and their potential to manage weeds across a range of agricultural and environmental contexts It emphasizes the deployment of ecological principles to prevent weed infestations reduce crop losses and strengthen ecosystems In a time when growing population and changing climates are placing enormous pressure on global food production this approach to weed management has never been more vital Ecologically Based Weed Management readers will also find A global team of expert contributors to a multidisciplinary approach Detailed discussion of topics like herbicide limitation integrated weed management and more Insights pertinent to agriculture academia government industry and more Ecologically Based Weed Management is ideal for researchers in agriculture chemistry weed science agronomy ecology and related fields as well as for regulators and advanced students Lively Capital Kaushik Sunder Rajan,2012-04-02 This collection of anthropology of science essays explores the new forms of capital markets ethical legal and intellectual property concerns associated with new forms of research in the life sciences **Agrobiodiversity Management for Food Security** Jillian M. Lenné,David Wood,2011 Agrobiodiversity provides most of our food through our interaction with crops and domestic animals Future global food security is firmly anchored in sound science based management of agrobiodiversity This book presents key concepts of agrobiodiversity management critically reviewing important current and emerging issues including agricultural development crop introduction practical diversity in farming systems impact of modern crop varieties and GM crops conservation climate change food sovereignty and policies It will also address claims and misinformation in the subject based on sound scientific principles The Wild Oryza Genomes Tapan K. Mondal,Robert J. Henry,2018-02-15 This book focuses on the latest genome sequencing of the 25 wild Oryza species public and private genomic resources and their impact on genetic improvement research It also addresses the untapped reservoir of agronomically important traits in wild Oryza species Rice is a model crop plant that is frequently used to address several basic questions in plant biology yet its wild relatives offer an untapped source of agronomically important alleles that are absent in the rice gene pool The genus Oryza is extremely diverse as indicated by a wide range of chromosome numbers different ploidy levels and genome sizes After a 13 year gap from the first sequencing of rice in the 2002 the genomes of 11 wild Oryza species have now been sequenced and more will follow These vast genomic resources are extremely useful for addressing several basic questions on the origin of the genus evolutionary relationships between the species domestication and environmental adaptation and also help to substantiate molecular breeding and pre breeding work to introgress useful characters horizontally from wild species into cultivated rice Coastal Ecosystems of the Tropics - Adaptive Management Velmurugan Ayyam,Swarnam Palanivel,Sivaperuman Chandrakasan,2019-10-11 The coastal areas of the tropics are rich in

biodiversity natural resources and place of intensive developmental activities as it provides livelihood to millions of people. At the same time, evidences suggest that several unique coastal ecosystems viz mangroves wetlands salt marshes corals estuaries sand dunes and agro ecosystem are vulnerable to natural disasters and events associated with global climate change. In recent times degradation of land water and genetic erosion besides threat to native flora and fauna have been increasing due to unsustainable developmental activities. Therefore a paradigm shift in deriving livelihood through conventional methods developmental strategies conservation practices are required for balanced and sustainable growth of the coastal areas. This publication strives to cover the status of different natural resources of the coastal region various aspects of degradation process production need and restorative methods besides new technological options and its socio economic implications with case examples. Special focus is given to bring out the scope and potential of mangrove based farming integrated and organic farming and its value addition besides the role of coastal vegetations as bioshield in protecting these regions from sea erosion cyclones and tsunami. As the tropical coastal areas are vulnerable to climate change events this book also covers the recent weather pattern impacts of climate change and climate resilient technologies besides intuitional linkages and policy framework aimed at balancing development and environmental concerns. *Choice*
