Supporting K-12 English Language Learners in Science Cory Buxton, Martha Allestaht-Snyder, 2016-11-18 The contribution of this book is to synthesize important common themes and highlight the unique features findings and lessons learned from three systematic ongoing research and professional learning projects for supporting English learners in science Each project based in a different region of the U S and focused on different age ranges and target populations actively grapples with the linguistic implications of the three dimensional learning required by the Framework for K 12 Science Education and the Next Generation Science Standards Each chapter provides research based recommendations for improving the teaching of science to English learners Offering insights into teacher professional learning as well as strategies for measuring and monitoring how well English learners are learning science and language this book tells a compelling and inclusive story of the challenges and the opportunities of teaching science to English learners PISA 2015 Results (Volume I) Excellence and Equity in Education OECD, 2016-12-06 The OECD Programme for International Student Assessment PISA examines not just what students know in science reading and mathematics but what they can do with what they know Results from PISA show educators and policy makers the quality and equity of learning outcomes achieved elsewhere *Geoinformatics and Atmospheric Science* Tomasz Niedzielski, Krzysztof Migala, 2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes

This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales Strong Performers and Successful Reformers in Education Lessons from PISA 2012 for the United States OECD,2013-12-03 This report compares the performance of 15 year olds in the United States in PISA against the global patterns and trends *Digest of Education Statistics* ,2009 Contains information on a variety of subjects within the field of education statistics including the number of schools and colleges enrollments teachers graduates educational attainment finances Federal funds for education libraries international education and research and development Energy From The Nucleus: The Science And Engineering Of Fission And Fusion Gerard M Crawley,2016-08-11 Nuclear energy is important both as a very large energy resource and as a source of carbon free energy However incidents such as the Fukushima Daiichi nuclear disaster 2011 the Chernobyl disaster 1986 and the Three Mile Island accident 1979 have cast doubts on the future of nuclear fission as a major player in the future energy mix This volume provides an excellent overview of the current situation regarding nuclear fission as well as a description of the enormous potential advantages offered by nuclear fusion including an essentially unlimited fuel supply with minimal environmental impact Energy from the Nucleus focuses on the two main approaches to producing energy from the nucleus fission and fusion The chapters on nuclear fission cover the status of current and future generations of reactors as well as new safety requirements and the environmental impact of electricity production from nuclear fission The chapters on nuclear fusion discuss both inertial confinement fusion and magnetic confinement fusion including the new international fusion test facility ITER The expertise of the authors who are active participants in the respective technologies ensures that the information provided is both reliable and current Their views will no doubt enlighten our understanding of the future of energy from the nucleus *Nuclear Science Abstracts* ,1951 **The Metaphysics of Science and Aim-Oriented Empiricism** Nicholas Maxwell,2019-03-09 This book gives an account of work that I have done over a period of decades that sets out to solve two fundamental problems of philosophy the mind body problem and the problem of induction Remarkably these revolutionary contributions to philosophy turn out to have dramatic implications for a wide range of issues outside philosophy itself most notably for the capacity of humanity to resolve current grave global problems and make progress towards a better wiser world A key element of the proposed solution to the first problem is that physics is about only a highly specialized aspect of all that there is the causally efficacious aspect Once this is understood it ceases to be a mystery that natural science says nothing about the experiential aspect of reality the colours we perceive the inner experiences we are

aware of That natural science is silent about the experiential aspect of reality is no reason whatsoever to hold that the experiential does not objectively exist A key element of the proposed solution to the second problem is that physics in persistently accepting unified theories only thereby makes a substantial metaphysical assumption about the universe it is such that a unified pattern of physical law runs through all phenomena We need a new conception and kind of physics that acknowledges and actively seeks to improve metaphysical presuppositions inherent in the methods of physics The problematic aims and methods of physics need to be improved as physics proceeds These are the ideas that have fruitful implications I set out to show for a wide range of issues for philosophy itself for physics for natural science more generally for the social sciences for education for the academic enterprise as a whole and most important of all for the capacity of humanity to learn how to solve the grave global problems that menace our future and thus make progress to a better wiser world It is not just science that has problematic aims in life too our aims whether personal social or institutional are all too often profoundly problematic and in urgent need of improvement We need a new kind of academic enterprise which helps humanity put aims and methods improving meta methods into practice in personal and social life so that we may come to do better at achieving what is of value in life and make progress towards a saner wiser world This body of work of mine has met with critical acclaim Despite that astonishingly it has been ignored by mainstream philosophy In the book I discuss the recent work of over 100 philosophers on the mind body problem and the metaphysics of science and show that my earlier highly relevant work on these issues is universally ignored the quality of subsequent work suffering as a result My hope in publishing this book is that my fellow philosophers will come to appreciate the intellectual value of my proposed solutions to the mind body problem and the problem of induction and will as a result join with me in attempting to convince our fellow academics that we need to bring about an intellectual institutional revolution in academic inquiry so that it takes up its proper task of helping humanity learn how to solve problems of living including global problems and make progress towards as good as wise and enlightened a world as possible
