Materials Science in Microelectronics I Eugene Machlin,2010-07-07 Thin films play a key role in the material science of microelectronics and the subject matter of thin films divides naturally into two headings processing structure relationship and structure properties relationship The first volume of Materials Science in Microelectronics focuses on the first relationship that between processing and the structure of the thin film The state of the thin film s surface during the period that one monolayer exists before being buried in the next layer determines the ultimate structure of the thin film and thus its properties This volume takes into consideration the following potential influencing factors crystal defects void structure grain structure interface structure in epitaxial films the structure of amorphous films and reaction induced structure An ideal text

or reference work for students and researchers in material science who need to learn the basics of thin films

The Physics and Chemistry of Carbides, Nitrides and Borides R. Freer, 2012-12-06 Carbides nitrides and borides are families of related refractory materials. Traditionally they have been employed in applications associated with engineering ceramics where either high temperature strength or stability is of primary importance. In recent years there has been a growing awareness of the interesting electrical, thermal and optical properties exhibited by these materials and the fact that many can be prepared as monolithic ceramics, single crystals and thin films. In practical terms carbides, nitrides and borides offer the prospect of a new generation of semiconductor materials for example which can function at very high temperatures in severe environmental conditions. However as yet we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties. Under the auspices of the NATO Science Committee an Advanced Research Workshop ARW was held on the Physics and Chemistry of Carbides, Nitrides and Borides, University of Manchester, 18-22 September 1989 in order to assess progress to date and identify the most promising themes and materials for future research. An international group of 38 scientists considered developments in 5 main areas: The preparation of powders, monolithic ceramics, single crystals and thin films; Phase transformations; microstructure; defect structure and mass transport; Materials stability. Theoretical studies; Electrical, thermal and optical properties of bulk materials and thin films.

Kinetics of Ordering and Growth at Surfaces Max G. Lagally, 2012-12-06 This volume contains the papers presented at the NATO Advanced Research Workshop on Kinetics of Ordering and Growth at Surfaces held in Acquafredda di Maratea, Italy, September 18-22, 1989. The workshop's goal was to bring together theorists and experimentalists from two related fields, surface science and thin film growth, to highlight their common interests and overcome a lack of communication between these two communities. Typically surface scientists are only concerned with the microscopic atomic description of solids within one monolayer of the surface. Thin film growers are usually considered more empirical in their approach, concerned primarily with the quality of their product and have not necessarily found it useful to incorporate surface science understanding into their art. This workshop aimed to counter at least in some measure these stereotypes. Its focus was on generating dialogue on the fundamental structural and kinetic processes that lead to the initial stages of film growth from both the surface science and crystal growth perspectives. To achieve this, alternate days emphasized the view of surface science and thin film growth with considerable time for discussion, a format that appeared to succeed well. The success of the workshop is in large measure due to the efforts of the organizing committee: L. C. Feldman, P. K. Larsen, J. A. Venables and J. Villain, whose advice on the constitution of the program was invaluable.
