Sensations A Defense Of Type Materialism:

Sensations Christopher S. Hill, 1991-01-25 This is a book about sensory states and their apparent characteristics It confronts a whole series of metaphysical and epistemological questions and presents an argument for type materialism the view that sensory states are identical with the neural states with which they are correlated According to type materialism sensations are only possessed by human beings and members of related biological species silicon based androids cannot have sensations The author rebuts several other rival theories dualism double aspect theory eliminative materialism functionalism and explores a number of important issues the forms and limits of introspective awareness of sensations the semantic properties of sensory concepts knowledge of other minds and unity of consciousness The book is a significant contribution to the philosophy of mind and has much to say to psychologists and cognitive scientists Skepticism About the External

World Panayot Butchvarov, 1998-05-21 Do we know or even have evidence that external material objects exist Drawing powerfully on techniques from both analytic and continental philosophy Butchvarov offers a strikingly original approach to this perennial issue He argues that only a direct realist view of perception the view that in perception we are directly aware of material objects has any hope of providing a compelling response to the skeptic The seemingly insuperable problem for direct realism has always been to explain hallucination dreaming and other situations where the object of awareness is not a really existing physical object This has led many philosophers to adopt views in which perceptual consciousness involves a subjective state that is the direct object of awareness Butchvarov argues persuasively that all such views are helpless in the face of the skeptic's arguments His radical innovation is to insist that the direct object of perceptual and even dreaming and hallucinatory experience is usually a material object but not necessarily one that actually exists This leads to a sophisticated metaphysics in which reality is ultimately constructed by human decisions out of objects that are ontologically more basic but which cannot be said in themselves to be either real or unreal Butchvarov's ingenious approach to a longstanding philosophical issue as well as the extensive range of his references to traditional and contemporary discussions of the topic makes Skepticism about the External World a thrilling and essential book for philosophers and philosophically minded readers

Wilken,2014-02-27 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain s activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon
