Sensor Modelling Design And Data Processing For Autonomous Navigation In Confined Environments:

Sensor Modelling, Design and Data Processing for Autonomous Navigation Martin David Adams, 1999 This invaluable book presents an unbiased framework for modelling and using sensors to aid mobile robot navigation It addresses the problem of accurate and reliable sensing in confined environments and makes a detailed analysis of the design and construction of a low cost optical range finder This is followed by a quantitative model for determining the sources and propagation of noise within the sensor The physics behind the causes of erroneous data is also used to derive a model for detecting and labelling such data as false In addition the author's data processing algorithms are applied to the problem of environmental feature extraction This forms the basis of a solution to the problem of mobile robot localisation The book develops a relationship between the kinematics of a mobile robot during the execution of successive manoeuvres and the sensed features Results which update a mobile vehicle's position using features from 2D and 3D scans are presented

Sci-tech News, 1999 Fuzzy Logic Techniques for Autonomous Vehicle Navigation Dimiter Driankov, Alessandro Saffiotti, 2013-03-09 In the past decade a critical mass of work that uses fuzzy logic for autonomous vehicle navigation has been reported Unfortunately reports of this work are scattered among conference workshop and journal publications that belong to different research communities fuzzy logic robotics artificial intelligence intelligent control and it is therefore not easily accessible either to the new comer or to the specialist As a result researchers in this area may end up reinventing things while being unaware of important existing work We believe that research and applications based on fuzzy logic in the field of autonomous vehicle navigation have now reached a sufficient level of maturity and that it should be suitably reported to the largest possible group of interested practitioners researchers and students On these grounds we have endeavored to collect some of the most representative pieces of work in one volume to be used as a reference Our aim was to provide a volume which is more than yet another random collection of papers and gives the reader some added value with respect to the individual papers In order to achieve this goal we have aimed at Selecting contributions which are representative of a

wide range of problems and solutions and which have been validated on real robots and Setting the individual contributions in a clear framework that identifies the main problems of autonomous robotics for which solutions based on fuzzy logic have been proposed **Energy Research Abstracts** ,1995 **Subject Guide to Books in Print** ,2001 Remote Sensing Applications in Oceanography with Deep Learning Muhammad Yasir,Shah Nazir,Chao Chen ,Weimin Huang,2025-10-30 Remote sensing technology has revolutionized ocean exploration allowing researchers to monitor and understand various oceanographic processes and phenomena on a global scale Remote sensing which involves the use of satellites and aircraft to collect data about the planet's surface and atmosphere enables scientists to monitor oceanic conditions in real time track changes in sea level and analyse marine ecosystems Deep learning plays a pivotal role in enhancing remote sensing technology revolutionizing how we collect interpret and utilize vast amounts of environmental data By leveraging deep learning remote sensing can identify subtle patterns and anomalies that traditional methods might miss such as climate change impacts Together remote sensing and ocean exploration enhance our ability to protect marine environments sustain biodiversity and address global challenges like climate change and sustainable development These advancements not only deepen our scientific knowledge but also inform policy decisions and conservation efforts ensuring the health and resilience of the world's oceans for future generations This Research Topic compiles the latest research and developments in the application of remote sensing techniques particularly using deep learning methods to improve our understanding of the oceans We invite original research articles reviews and case studies on the following topics Advanced remote sensing techniques for ocean observation including deep learning based approaches Integration of satellite aerial and in situ data for oceanographic studies using deep learning Machine learning and artificial intelligence algorithms optimized for ocean remote sensing Hyperspectral and multispectral imaging for marine applications enhanced by deep learning techniques SAR Synthetic Aperture Radar applications in oceanography with deep learning models Remote sensing of coastal and estuarine environments using deep learning architectures Monitoring of harmful algal blooms using deep learning algorithms applied to remote sensing data Deep learning based approaches for remote sensing of coral reefs and marine habitats Applications of deep learning in fisheries management utilizing remote sensing data Deep learning based assessment of climate change impacts on oceans using remote sensing datasets Manuscripts relating to practical applications in ecological monitoring and marine target tracking can be submitted to the Research Topic Remote Sensing Applications in Marine Ecology Monitoring and Target Sensing <https://www.frontiersin.org/research-topics/64528/remote-sensing-applications-in-marine-ecology-monitoring-and-target-sensing> *American Book Publishing Record* ,1998 **Exploring the Micro World of Robotics Through Insect Robots** Vignesh, U.,Rao, Annavarapu Chandra Sekhara,Raja, Saleem,Chitra, P.,2024-10-15 Insect robots inspired by the agility and resilience of insects are emerging as innovative tools in disaster recovery efforts These small agile robots are designed to navigate through tight spaces unstable environments and hazardous conditions that are often

inaccessible to human responders Their ability to operate autonomously or in swarms makes them particularly effective in large scale disasters where speed and efficiency are crucial As technology continues to advance insect robots are poised to play an increasingly vital role in enhancing the effectiveness and safety of disaster recovery operations providing invaluable support in the race against time to save lives Exploring the Micro World of Robotics Through Insect Robots delves into the futuristic field of insect robotics and their pivotal role in disaster recovery scenarios Encompassing a diverse array of subjects ranging from microcontroller principles and sensor advancements to ethical considerations and policy implications this book offers a comprehensive perspective on the transformative potential of insect inspired technologies in disaster response efforts Covering topics such as advanced algorithms machine learning and robot swarms this book is an excellent resource for emergency management professionals robotics engineers and developers public safety and security agencies academicians researchers policymakers and more Commerce Business Daily ,1998-05
