Jude Hemanth, 2023-11-14 Computational Intelligence and Deep Learning Methods for Neuro rehabilitation Applications explores the different possibilities of providing AI based neuro rehabilitation methods to treat neurological disorders. This book provides in depth knowledge on the challenges and solutions associated with the different varieties of neuro rehabilitation through the inclusion of case studies and real time scenarios in different geographical locations. Beginning with an overview of neuro rehabilitation applications, the book discusses the role of machine learning methods in brain function grading for adults with Mild Cognitive Impairment, Brain Computer Interface for post stroke patients, developing assistive devices for paralytic patients and cognitive treatment for spinal cord injuries. Topics also include AI based video games to improve the brain performances in children with autism and ADHD, deep learning approaches and magnetoencephalography data for limb movement, EEG signal analysis, smart sensors and the application of robotic concepts for gait control. Incorporates artificial intelligence techniques into neuro rehabilitation and presents novel ideas for this process. Provides in depth case studies and state of the art methods along with the experimental study. Presents a block diagram based complete set up in each chapter to help in real time implementation. Human Performance and Ergonomics Peter A.

Hancock, 1999-04-13 Human Performance and Ergonomics brings together a comprehensive and modern account of how the context of performance is crucial to understanding behavior. Environment provides both constraints and opportunities to individuals such that external conditions may have reciprocal or interactive effects on behavior. The book begins with an account of research in human factors and engineering with application of research to real world environments, methodological concerns and rumination on current and future trends. The book proceeds to how technology has moved from being designed to help human physical survival to helping humans achieve quality of life improvements. Real world examples are explored in detail including hearing technology, driving and aviation. Issues of control, maneuvering and planning are discussed in conjunction with how intention and expectancy affect behavior. The fit between human and environment is examined as a dynamic interaction and many chapters address the all important human machine communication, particularly that between humans and computers. The book closes with a reminder that even our technological environment is filled with other people with whom we must interact personally or via technology to achieve our larger goals. Teamwork is thus discussed for its integration of cognitive, behavioral and affective components toward our achieving desired aims. Includes the application of research in human factors in engineering to real world environments. Discussion of both current and future trends is included. Real world examples of how technology is now helping humans to achieve quality of life improvements are explored in detail including hearing technology, driving and aviation. Many chapters examine the all important human machine communication, particularly human computer interaction. HCI Music for Children with Hearing Loss Lyn E. Schraer-Joiner, 2014.
