Sensory Guidance Of Movement:

Sensory Guidance of Movement Gregory R. Bock, Jamie A. Goode, 2008-04-30
Sensory Guidance of Movement Chairman Mitchell Glickstein 1998 In the past few years there has been an increasing recognition of the multiplicity of sensory and motor areas of the cerebral cortex However still relatively little is known about the way in which sensory areas are functionally linked to motor areas On the basis of current anatomical evidence there are three major pathways involved in this linking One of these routes is by way of cortico cortical links beginning in the primary sensory areas of the cortex and connecting via a series of synaptic relays to motor or premotor areas There are also two massive subcortical routes One of these involves the basal ganglia the other the cerebellum This book focuses on current research on the structure and functions of these three pathways and their role in the sensory guidance of movement Motor psychophysicists have made progress in characterizing the nature of movements such as reaching and grasping and how such movements are modified by incoming sensory information Anatomical studies have revealed important new information about the ways in which sensory information is relayed to the basal ganglia and cerebellum There is now a volume of scanning evidence about the activity of brain areas in humans and recordings from individual neurons in animals during sensory guided movement This book summarizes much of this recent knowledge and provides a forum for suggesting new avenues for further study The topics covered also have important implications for understanding the role of these pathways in human disease Sensory Guidance of Movement Gregory R. and contextualized through the commentaries of other leading researchers in the field The contributors were selected on the basis of their standing in the field

The Oculomotor and Skeletalmotor Systems, 2011-09-22 The Oculomotor and Skeletalmotor Systems

Attention in Action Glyn Humphreys, Jane Riddoch, 2004-11 Attention in Action provides state of the art discussion of the role of attention in action and of action in constraining attention

Movement Control Paul Cordo, Stevan Harnad, 1994-05-27 Movement is arguably the most fundamental and important function of the nervous system Purposive movement requires the coordination of actions within many areas of the cerebral cortex cerebellum basal ganglia spinal cord and peripheral nerves and sensory receptors which together must control a highly complex biomechanical apparatus made up of the skeleton and muscles Beginning at the level of biomechanics and spinal reflexes and proceeding upward to brain structures in the cerebellum brainstem and cerebral cortex the chapters in this book highlight the important issues in movement control Commentaries provide a balanced treatment of the articles that have been written by experts in a variety of areas concerned with movement including behaviour physiology robotics and mathematics

Spider Physiology and Behaviour, 2011-10-12 This latest volume in this series contains articles on Arachnid Physiology and Behaviour The papers in this special issue give rise to key themes for the future Contributions from the leading researchers in entomology Discusses arachnid physiology and behavior Includes in depth reviews with valuable information for a variety of entomology disciplines

Interval Timing and Time-Based Decision Making Warren H. Meck, Valérie Doyère, Agnes Gruart, 2012-05-01 The perception of time is crucial for everyday activities from the sleep wake cycle to playing and appreciating music verbal communication to the determination of the value of a particular behavior With regard to the last point making decisions is heavily influenced by the duration of the various options the duration of the expected delays for receiving the options and the time constraints for making a choice Recent advances suggest that the brain represents time in a distributed manner and reflects time as a result of temporal changes in network states and or by the coincidence detection of the phase of different neural populations Moreover intrinsic oscillatory properties of neural circuits could determine timed motor responses This Research Topic partly an emergence of a Satellite EBBS meeting sponsored by the COST Action TIMELY will discuss how time in the physical world is reconstructed distorted and modified in brain networks by emotion learning and neuropathology This Research Topic on Timing contains up to date reviews regarding the relationship between time and decision making with respect to the underlying psychological and physiological mechanisms responsible for anticipation and evaluation processes

Perception Nicola Bruno, Francesco Pavani, 2018-07-26 The way that we interact with the environment on a daily basis is inherently multisensory Even a simple task such as judging the location of a light in a dark room depends not only on vision but also on proprioceptive cues about the position of our body in space The way that we experience food can be influenced not just by taste and smell but by visual and auditory cues Perception A multisensory perspective adopts a multisensory approach to understanding perception Rather than discussing each sense separately this book defines

perception as intrinsically multisensory from the start and examines multisensory interactions as the key process behind how we perceive our own body control its movements and perceive and recognise objects space and time But the book delves even deeper It discusses multisensory processing in conditions such as synaesthesia It addresses attention and the role of multisensory processing in learning By focussing on these domains the authors highlight and identify general principles in the field of perception study and introduce models experimental methods and pathologies that will be of interest to all those studying within the field of perception The authors also illustrate applications that will be of interest to professionals whose work takes multisensory processing into account As an introduction to the topic of multisensory perception Perception A multisensory perspective will be essential reading for students from advanced undergraduate level through to postgraduate level in psychology philosophy and neuroscience Those studying physiotherapy and neurological rehabilitation human computer interface development or the design of products or services will also find this book of interest

Encyclopedia of the Human Brain ,2002-07-04 In the past decade enormous strides have been made in understanding the human brain The advent of sophisticated new imaging techniques e g PET MRI MEG etc and new behavioral testing procedures have revolutionized our understanding of the brain and we now know more about the anatomy functions and development of this organ than ever before However much of this knowledge is scattered across scientific journals and books in a diverse group of specialties psychology neuroscience medicine etc The Encyclopedia of the Human Brain places all information in a single source and contains clearly written summaries on what is known of the human brain Covering anatomy physiology neuropsychology clinical neurology neuropharmacology evolutionary biology genetics and behavioral science this four volume encyclopedia contains over 200 peer reviewed signed articles from experts around the world The Encyclopedia articles range in size from 5 30 printed pages each and contain a definition paragraph glossary outline and suggested readings in addition to the body of the article Lavishly illustrated the Encyclopedia includes over 1000 figures many in full color Managing both breadth and depth the Encyclopedia is a must have reference work for life science libraries and researchers investigating the human brain
