

Conjunctive water use in an African river basin: a case study in poor planning

FENDA A. AKIWUMI

Department of Geology, Hill College, PO Box 619, Hillsboro, Texas 76645, USA

Abstract A number of water related projects have operated, independently and at various times, over the River Rokel (Seli) basin in Sierra Leone, West Africa. These include a hydroelectric power scheme and mining and agricultural projects. It has not been adequately determined what the consequences of conjunctive water use within the basin are in terms of quantity and quality. Poor water management practices, however, are evident from a review of methodologies employed by the various operations. The need for effective project monitoring and evaluation through data collection and compilation is well recognized. The problem lies in overcoming the many identified factors preventing the achievement of these goals. This paper basically describes the schemes and highlights some of the limitations to sound river basin management as evident from this case study. Some recommendations are made for future basin planning.

INTRODUCTION

The ability to extract and utilize natural resources is often dependent on the level of development and management of available water resources. The harnessing of hydro-power, for example can lead to the establishment of agro-based and mining industries. Clean drinking water prevents diseases and provides an able workforce.

The country of Sierra Leone, West Africa experiences a humid tropical climate with annual rainfall averaging 3000 mm. Nine main river basins are found, ranging in size from 14 145 to 2979 km². As such, water availability is not a major problem. Water resources planning at basin level, however, taking into account the conjunctive use of water is generally not done.

The varied bodies involved with water often have overlapping terms of reference as regards water use and hydrological data collection. Policy on the compilation and dissemination of data is not effectively implemented. Further, poor communication and coordination between government departments, research institutions and the mining and geotechnical sectors is a common situation that precludes widespread accessibility to technical information.

Despite recommendations to this end, made in national development plans (Carney, 1964; GOSL, 1974) and by the establishment of a national committee of the UNESCO International Hydrological Programme, this goal has not yet been fully achieved. Consequently, water related projects continue to operate independently within basins.
