Vision, Modeling, and Visualization 2002 Günther Greiner, 2002 **Data Modeling for Metrology and Testing in Measurement Science** Franco Pavese, Alistair B. Forbes, 2008-12-16 The aim of this book is to provide firstly an introduction to probability and statistics especially directed to the metrology and testing fields and secondly a comprehensive newer set of modelling methods for data and uncertainty analysis that are generally not considered yet within mainstream methods The book brings for the first time a coherent account of these newer methods and their computational implementation They are potentially important because they address problems in application fields where the usual hypotheses that are at the basis of most of the traditional statistical and probabilistic methods for example relating to normality of the probability distributions are frequently not fulfilled to such an extent that an accurate treatment of the calibration or test data using standard approaches is not possible Additionally the methods can represent alternative ways of data analysis allowing a deeper understanding of complex situations in measurement The book lends itself as a possible textbook for undergraduate or postgraduate study in an area where existing texts focus mainly on the most common and well known methods that do not encompass modern approaches to calibration and testing problems The book is structured in such a way to guide readers with only a general interest in measurement issues through a series of review papers from an initial introduction to modelling principles in metrology and testing to the basic principles of probability in metrology and statistical approaches to certainty assessment **Curves and Surfaces for CAD** Gerald E. Farin, 2002 Preface Chapter 1 P Bezier How a Simple System Was Born Chapter 2 Introductory Material Chapter 3 Linear Interpolation Chapter 4 The de Casteljau Algorithm Chapter 5 The Bernstein Form of a Bezier Curve Chapter 6 Bezier Curve Topics Chapter 7 Polynomial Curve Constructions Chapter 8 B Spline Curves Chapter 9 Constructing Spline Curves Chapter 10 W Boehm Differential Geometry I Chapter 11 Geometric Continuity Chapter 12 Conic Sections Chapter 13 Rational Bezier and B Spline Curves Chapter 14 Tensor Product Patches Chapter 15 Constructing Polynomial Patches Chapter 16 Composite Surfaces Chapter 17 Bezier Triangles Chapter 18 Practical Aspects of Bezier Triangles Chapter 19 W Boehm Differential Geometry II Chapter 20 Geometric Continuity for Surfaces Chapter 21 Surfaces with Arbitrary Topology Chapter 22 Coons Patches Chapter 23 Shape Chapter 24 Evaluation of Some Methods Appendix A Quick Reference of Curve Computational Science and Its Applications - ICCSA 2023 Osvaldo Gervasi, Beniamino Murgante, David Taniar, Bernady O.
