Mathematical Methods in Queuing Theory Vladimir V. Kalashnikov, 2014-03-14 The material of this book is based on several courses which have been delivered for a long time at the Moscow Institute for Physics and Technology Some parts have formed the subject of lectures given at various universities throughout the world Freie Universitat of Berlin Chalmers University of Technology and the University of Goteborg University of California at Santa Barbara and others The subject of the book is the theory of queues This theory as a mathematical discipline begins with the work of A Erlang who examined a model of a telephone station and obtained the famous formula for the distribution of the number of busy lines which is named after him Queueing theory has been applied to the study of numerous models emergency aid road traffic computer systems etc Besides it has lead to several related disciplines such as reliability and inventory theories which deal with similar models Nevertheless many parts of the theory of queues were developed as a pure science with no practical applications The aim of this book is to give the reader an insight into the mathematical methods which can be used in queueing theory and to present examples of solving problems with the help of these methods Of course the choice of the methods is quite subjective Thus many prominent results have not even been mentioned

Mathematical Methods in the Theory of Queuing A. Y. Khinchin, 2013-07-04 Written by a prominent Russian mathematician this concise monograph examines aspects of queueing theory as an application of probability Prerequisites include a familiarity with the theory of probability and mathematical analysis 1960 edition

Mathematical Methods in Queueing Theory A. B. Clarke, 2012-12-06 On May 10 12 1973 a Conference on Mathematical Methods in Graph Theory was held at Western Michigan University in Kalamazoo The theme of this Conference was recent advances in the application of analytic and algebraic methods to the analysis of queues and queueing networks In addition some discussion was given to statistical analyses in queues control problems and graphical methods A total of 83 individuals from both industry and academic establishments participated in the Conference A list of these participants can be found on page 373 A total of 18 papers were presented with substantial time being devoted to their informal discussion This volume constitutes the proceedings of the Conference and includes all papers presented
