

RESEARCH IN MATHEMATICAL BIOLOGY

- Identify unresolved biological question: typically I study questions related to cancer growth and treatment
- Understand the biology well enough to develop a *mathematical model* of the biological problem
- Compare model predictions to biological data
- Re-work model until it well-describes biological data
- Use model to seek answers to unresolved biological question

$$\frac{dU}{dt} = rU - \beta \frac{UV}{N} - (c_0 + c_{\text{tox}}I) \frac{UT}{N}, \quad U(0) = U_0$$

$$\frac{dI}{dt} = \beta \frac{UV}{N} - \delta_1 I - (c_0 + c_{\text{tox}}I) \frac{IT}{N}, \quad I(0) = 0,$$

$$\frac{dV}{dt} = w_V(t) + \alpha \delta_1 I - \delta_2 V, \quad V(0) = 0,$$

$$\frac{dT}{dt} = c_1 I + \chi_A A + \chi_D D - \delta_3 T, \quad T(0) = 0,$$

$$\frac{dA}{dt} = c_2 I - \delta_4 A, \quad A(0) = 0,$$

$$\frac{dD}{dt} = w_D(t) - \delta_5 D, \quad D(0) = 0,$$

Mathematical Problems In The Biological:

Mathematical Problems in the Biological Sciences, 1962 Mathematical Problems in the Biological Sciences Sol I. Rubinow, 1973-01-01 This book represents a small and highly selective sample of the quantitative approach to biology The author encourages the reader to disseminate further the cause of mathematics applied to the biological sciences

Mathematical Problems in Biology P. van den Driessche, 2013-03-08 A conference on Some Mathematical Problems in Biology was held at the University of Victoria Victoria B C Canada from May 7 10 1973 The participants and invited speakers were mathematicians interested in problems of a biological nature and scientists actively engaged in developing mathematical models in biological fields One aim of the conference was to attempt to assess what the recent rapid growth of mathematical interaction with the biosciences has accomplished and may accomplish in the near future The conference also aimed to expose the problems of communication between mathematicians and biological scientists and in doing so to stimulate the interchange of ideas It was recognised that the topic spans an enormous breadth and little attempt was made to balance the very diverse areas Widespread active interest was shown in the conference and just over one hundred people registered The varied departments and institutions across North America from which the participants came made it both academically and geographically mixed The chief activity of the conference was the presentation of papers Nine invited guest speakers see table of contents each gave a one hour talk These covered a wide range of topics There were twenty five shorter twenty minute contributed papers and almost all papers were followed by a five minute question and discussion period Duplicated abstracts of presented papers were available at the meeting An evening informal discussion meeting of participants chaired by Dr A B Taylor and led by Drs E M Hagmeier E C *Mathematical Problems in the Biological Sciences* Sol I.

to bear on questions in population biology Simultaneously advances in experimental and field work have produced a wealth of new data While this growth has tended to fragment the field one unifying theme is that similar mathematical questions arise in a range of biological contexts This volume contains the proceedings of a symposium on Some Mathematical Questions in Biology held in Chicago in 1987 The papers all deal with different aspects of population biology but there are overlaps in the mathematical techniques used for example dynamics of nonlinear differential and difference equations form a common theme The topics covered are cultural evolution multilocus population genetics spatially structured population genetics chaos and the dynamics of epidemics and the dynamics of ecological communities **Towards a Mathematical**

Theory of Complex Biological Systems C. Bianca,N. Bellomo,2011 This monograph has the ambitious aim of developing a mathematical theory of complex biological systems with special attention to the phenomena of ageing degeneration and repair of biological tissues under individual self repair actions that may have good potential in medical therapy The approach to mathematically modeling biological systems needs to tackle the additional difficulties generated by the peculiarities of living matter These include the lack of invariance principles abilities to express strategies for individual fitness heterogeneous behaviors competition up to proliferative and or destructive actions mutations learning ability evolution and many others Applied mathematicians in the field of living systems especially biological systems will appreciate the special class of integro differential equations offered here for modeling at the molecular cellular and tissue scales A unique perspective is also presented with a number of case studies in biological modeling Proceedings of Symposia in Applied Mathematics Symposium in Applied Mathematics of the American Mathematical Society (14, 1961, New York City),1962

Some Mathematical Questions in Biology George F. Oster,1980-12-31 Covers material in three general categories population dynamics development and pattern formation and physiological design Mathematical Problems in the Biological Sciences American Mathematical Society,1962 Mathematical Biology Avner Friedman,2018-06-14 The fast growing field of mathematical biology addresses biological questions using mathematical models from areas such as dynamical systems probability statistics and discrete mathematics This book considers models that are described by systems of partial differential equations and it focuses on modeling rather than on numerical methods and simulations The models studied are concerned with population dynamics cancer risk of plaque growth associated with high cholesterol and wound healing A rich variety of open problems demonstrates the exciting challenges and opportunities for research at the interface of mathematics and biology This book primarily addresses students and researchers in mathematics who do not necessarily have any background in biology and who may have had little exposure to PDEs
