Mertens, 2013-04-17 In 1976 the first session on the teaching of evaluation was held at an annual meeting of evaluators. A few hardy souls gathered to exchange ideas on improving the teaching of evaluation. At subsequent annual meetings these informal sessions attracted more and more participants eager to talk about common teaching interests and to exchange reading lists, syllabuses, assignments and paper topics. The sessions were irreverent, innovative, lively and unpredictable. Eventually the group formalized itself with the American Evaluation Association as the Topical Interest Group in the Teaching of Evaluation (TIG-TOE). As word of TIG-TOE's activities spread, instructors from all over the country clamored for assistance and advice. It became apparent that a handbook was needed: a practical interdisciplinary guide to the teaching of evaluation. Donna M. Mertens, a long-standing member of TIG-TOE and an accomplished teacher of evaluation, volunteered to edit the book, and her skills, sensitivity and experience in the craft of teaching are apparent throughout. The text focuses on the process skills necessary to solve nonroutine problems in mathematics and other subjects, with the goal of making students better problem solvers both in and outside of the classroom. Chapters present and define a curriculum of over 60 nonroutine problems in mathematics and other content areas and explore the pedagogy to implement this type of curriculum consistent with the NCTM Standards and Principles to Action. Four different models of implementation are discussed alongside a structured approach through seven difficulty levels, with examples to ensure that every student, independent of their mastery of mathematics content, can improve their ability to solve nonroutine problems. It emphasizes to students how to transfer their problem-solving skills to other real-world areas, including increasing ecological awareness, appreciating diversity and addressing significant and meaningful problems in their life, school and community. The curriculum introduced in this book

can be included as a component of a traditional four year academic high school curriculum aligned with the Common Core Mathematical Practices or as part of a one year isolated required or elective mathematics course Based on extensive field testing this approach has been effective in both traditional mathematics courses and math electives such as a course in Problem Solving This book provides the necessary guidance to allow each mathematics teacher to effectively integrate the approach in their classrooms This book is ideal for secondary mathematics teachers of all levels as well as teachers of mathematics electives
