## **Mathematical Foundations For Social Anal:**

*Mathematical Foundations for Social Analysis* Robert McGinnis, 1965      *Social Network Analysis* Stanley Wasserman, Katherine Faust, 1994-11-25 Social network analysis is used widely in the social and behavioral sciences as well as in economics marketing and industrial engineering The social network perspective focuses on relationships among social entities and is an important addition to standard social and behavioral research which is primarily concerned with attributes of the social units Social Network Analysis Methods and Applications reviews and discusses methods for the analysis of social networks with a focus on applications of these methods to many substantive examples It is a reference book that can be used by those who want a comprehensive review of network methods or by researchers who have gathered network data and want to find the most appropriate method by which to analyze it It is also intended for use as a textbook as it is the first book to provide comprehensive coverage of the methodology and applications of the field      *Social Network Analysis in*

*Telecommunications* Carlos Andre Reis Pinheiro, 2011-05-09 A timely look at effective use of social network analysis within the telecommunications industry to boost customer relationships The key to any successful company is the relationship that it builds with its customers This book shows how social network analysis analytics and marketing knowledge can be combined to create a positive customer experience within the telecommunications industry Reveals how telecommunications companies can effectively enhance their relationships with customers Provides the groundwork for defining social network analysis Defines the tools that can be used to address social network problems A must read for any professionals eager to distinguish their products in the marketplace this book shows you how to get it done right with social network analysis

**Graph-Based Social Media Analysis** Ioannis Pitas, 2016-04-19 Focused on the mathematical foundations of social media analysis Graph Based Social Media Analysis provides a comprehensive introduction to the use of graph analysis in the study of social and digital media It addresses an important scientific and technological challenge namely the confluence of graph analysis and network theory with linear algebra      Trends in Multiple Criteria Decision Analysis Salvatore Greco, Matthias Ehrgott, José Rui Figueira, 2010-09-10 Multiple Criteria Decision Making MCDM is the study of methods and procedures by which concerns about multiple conflicting criteria can be formally incorporated into the management planning process A key area of research in OR MS MCDM is now being applied in many new areas including GIS systems AI and group decision making This volume is in effect the third in a series of Springer books by these editors all in the ISOR series and it brings all the latest developments in MCDM into focus Looking at developments in the applications methodologies and foundations of MCDM it presents research from leaders in the field on such topics as Problem Structuring Methodologies Measurement Theory and MCDA Recent Developments in Evolutionary Multiobjective Optimization Habitual Domains and Dynamic MCDM in Changeable Spaces Stochastic Multicriteria Acceptability Analysis and many more chapters

**Mathematical Foundations for Social Analysis** Robert McGinnis,      Time Series Analysis for the Social Sciences

Janet M. Box-Steffensmeier, John R. Freeman, Matthew P. Hitt, Jon C. W. Pevehouse, 2014-12-22 Time series or longitudinal data are ubiquitous in the social sciences Unfortunately analysts often treat the time series properties of their data as a nuisance rather than a substantively meaningful dynamic process to be modeled and interpreted Time Series Analysis for the Social Sciences provides accessible up to date instruction and examples of the core methods in time series econometrics Janet M Box Steffensmeier John R Freeman Jon C Pevehouse and Matthew P Hitt cover a wide range of topics including ARIMA models time series regression unit root diagnosis vector autoregressive models error correction models intervention models fractional integration ARCH models structural breaks and forecasting This book is aimed at researchers and graduate students who have taken at least one course in multivariate regression Examples are drawn from several areas of social science including political behavior elections international conflict criminology and comparative political economy **Data Analytics for Social Microblogging Platforms** Soumi Dutta, Asit Kumar Das, Saptarshi Ghosh, Debabrata Samanta, 2022-11-04 Data Analysis for Social Microblogging Platforms explores the nature of microblog datasets also covering the larger field which focuses on information data and knowledge in the context of natural language processing The book investigates a range of significant computational techniques which enable data and computer scientists to recognize patterns in these vast datasets including machine learning data mining algorithms rough set and fuzzy set theory evolutionary computations combinatorial pattern matching clustering summarization and classification Chapters focus on basic online micro blogging data analysis research methodologies community detection summarization application development performance evaluation and their applications in big data Investigates various methodologies and algorithms for data summarization clustering and classification Covers both theory and practical applications from around the world across all related disciplines of Intelligent Information Filtering and Organization Systems Explores different challenges and issues related to spam filtering attribute selection and classification for large datasets *An Introduction to Political and Social Data Analysis (With R)* Thomas M. Holbrook, 2024-10-29 An Introduction to Political and Social Data Analysis With R provides students with an accessible overview of practical data analysis while also providing a gentle introduction to R By starting with statistics first and using just enough R code to generate results this text helps students focus on learning how to do data analysis while slowly gaining confidence in using R as they progress through the material This book is structured around learning by doing Students can follow along in each chapter by reading about statistics and their applications in R and then running the R code on their own as they work through contemporary political science and social science examples Author Thomas M Holbrook patiently explains each step in in the process avoiding overly complicated jargon and commands Exercises at the end of chapters feature both conceptual and calculation based questions so students can check their understanding of data analysis and practice using R At the end of the semester students can confidently add skills in data analysis with R to their resumes Generalized Blockmodeling Patrick Doreian, Vladimir Batagelj, Anuska Ferligoj, 2005 This

book provides an integrated treatment of blockmodeling the most frequently used technique in social network analysis It secures its mathematical foundations and then generalizes blockmodeling for the analysis of many types of network structures Examples are used throughout the text and include small group structures little league baseball teams intra organizational networks inter organizational networks baboon grooming networks marriage ties of noble families trust networks signed networks Supreme Court decisions journal citation networks and alliance networks Also provided is an integrated treatment of algebraic and graph theoretic concepts for network analysis and a broad introduction to cluster analysis These formal ideas are the foundations for the authors proposal for direct optimizational approaches to blockmodeling which yield blockmodels that best fit the data a measure of fit that is integral to the establishment of blockmodels and creates the potential for many generalizations and a deductive use of blockmodeling *Applied Quantitative Analysis in Education and the Social Sciences* Yaacov M. Petscher, Christopher Schatschneider, Donald L. Compton, 2013 To say that complex data analyses are ubiquitous in the education and social sciences might be an understatement Funding agencies and peer review journals alike require that researchers use the most appropriate models and methods for explaining phenomena Univariate and multivariate data structures often require the application of more rigorous methods than basic correlational or analysis of variance models Additionally though a vast set of resources may exist on how to run analysis difficulties may be encountered when explicit direction is not provided as to how one should run a model and interpret results The mission of this book is to expose the reader to advanced quantitative methods as it pertains to individual level analysis multilevel analysis item level analysis and covariance structure analysis Each chapter is self contained and follows a common format so that readers can run the analysis and correctly interpret the output for reporting

Algebraic Analysis of Social Networks J. Antonio R. Ostoic, 2021-01-26 Presented in a comprehensive manner this book provides a comprehensive foundation in algebraic approaches for the analysis of different types of social networks such as multiple signed and affiliation networks The study of such configurations corresponds to the structural analysis within the social sciences and the methods applied for the analysis are in the areas of abstract algebra combinatorics and graph theory Current research in social networks has moved toward the examination of more realistic but also more complex social relations by which agents or actors are connected in multiple ways Addressing this trend this book offers hands on training of the algebraic procedures presented along with the computer package multiplex written by the book's author specifically to perform analyses of multiple social networks An introductory section on both complex networks and for R will feature however the subjects themselves correspond to advanced courses on social network analysis with the specialization on algebraic models and methods Formal Concept Analysis of Social Networks Rokia Missaoui, Sergei O. Kuznetsov, Sergei Obiedkov, 2017-11-03 The book studies the existing and potential connections between Social Network Analysis SNA and Formal Concept Analysis FCA by showing how standard SNA techniques usually based on graph theory can be supplemented

by FCA methods which rely on lattice theory The book presents contributions to the following areas acquisition of terminological knowledge from social networks knowledge communities individuality computation other types of FCA based analysis of bipartite graphs two mode networks multimodal clustering community detection and description in one mode and multi mode networks adaptation of the dual projection approach to weighted bipartite graphs extensions to the Kleinberg s HITS algorithm as well as attributed graph analysis      **The SAGE Handbook of Social Network Analysis** John
