Mathematical Modelling Of Industrial Processes Lecture Notes In Mathematics Volume 1521:
    Integral Geometry, Radon Transforms and Complex Analysis Carlos A. Berenstein,Peter F. Ebenfelt,Simon Gindikin,Sigurdur Helgason,Alexander Tumanov,1998-04-16 This book contains the notes of five short courses delivered at the Centro Internazionale Matematico Estivo session Integral Geometry Radon Transforms and Complex Analysis held in Venice Italy in June 1996 three of them deal with various aspects of integral geometry with a common emphasis on several kinds of Radon transforms their properties and applications the other two share a stress on CR manifolds and related problems All lectures are accessible to a wide audience and provide self contained introductions and short surveys on the subjects as well as detailed expositions of selected results   **Flows on 2-dimensional Manifolds** Igor Nikolaev,Evgeny Zhuzhoma,1999-07-15 Time evolution in low dimensional topological spaces is a subject of puzzling vitality This book is a state of the art account covering classical and new results The volume comprises Poincar Bendixson local and Morse Smale theories as well as a carefully written chapter on the invariants of surface flows Of particular interest are chapters on the Anosov Weil problem C algebras and non compact surfaces The book invites graduate students and non specialists to a fascinating realm of research It is a valuable source of reference to the specialists   Elliptic Genera and Vertex Operator Super-Algebras Hirotaka Tamanoi,1999-06-21 This monograph deals with two aspects of the theory of elliptic genus its topological aspect involving elliptic functions and its representation theoretic aspect involving vertex operator super algebras For the second aspect elliptic genera are shown to have the structure of modules over certain vertex operator super algebras The vertex operators corresponding to parallel tensor fields on closed Riemannian Spin K hler manifolds such as Riemannian tensors and K hler forms are shown to give rise to Virasoro algebras and affine Lie algebras This monograph is chiefly intended for topologists and it includes accounts on topics outside of topology such as vertex operator algebras   **The Red Book of Varieties and Schemes** David Mumford,2004-02-21 Mumford s famous Red Book gives a simple readable account of the basic objects of algebraic geometry preserving as much as possible their geometric flavor and integrating this with the tools of commutative algebra It is aimed at graduates or mathematicians in other fields wishing to quickly learn aboutalgebraic geometry This new edition includes an appendix that gives an overview of the theory of curves their moduli spaces and their Jacobians one of the most exciting fields within algebraic geometry   *Projective Modules and Complete Intersections* Satya Mandal,1997-10-10 In these notes on Projective Modules and Complete Intersections an account on the recent developments in research on this subject is presented The author s preference for the technique of Patching isotopic isomorphisms due to Quillen formalized by Plumsted over the techniques of elementary matrices is evident here The treatment of Basic Element theory here incorporates Plumstead s idea of the generalized dimension functions These notes are highly selfcontained and should be accessible to any graduate student in commutative algebra or algebraic geometry They include fully self contained presentations of the theorems of Ferrand Szpiro Cowsik Nori and the techniques of Lindel
