**Stochastic Processes - Mathematics and Physics** Sergio Albeverio, Phillippe Blanchard, Ludwig Streit, 2006-11-14

*Stochastic Analysis and Mathematical Physics* Rolando Rebolledo, 2012-12-06 The seminar on Stochastic Analysis and Mathematical Physics started in 1984 at the Catholic University of Chile in Santiago and has been an on going research activity Since 1995 the group has organized international workshops as a way of promoting a broader dialogue among experts in the areas of classical and quantum stochastic analysis mathematical physics and physics This volume consisting primarily of contributions to the Third International Workshop on Stochastic Analysis and Mathematical Physics in Spanish ANESTOC held in Santiago Chile in October 1998 focuses on an analysis of quantum dynamics and related problems in probability theory Various articles investigate quantum dynamical semigroups and new results on  $q$  deformed oscillator algebras while others examine the application of classical stochastic processes in quantum modeling As in previous workshops the topic of quantum flows and semigroups occupied an important place In her paper R Carbone uses a spectral type analysis to obtain exponential rates of convergence towards the equilibrium of a quantum dynamical semigroup in the 2 sense The method is illustrated with a quantum extension of a classical birth and death process Quantum extensions of classical Markov processes lead to subtle problems of domains This is in particular illustrated by F Fagnola who presents a pathological example of a semigroup for which the largest subalgebra of the von Neumann algebra of bounded linear operators of  $2 \times 2$  IR IC contained in the domain of its infinitesimal generator is not a weakly dense

**Stochastic Processes - Mathematics and Physics II** Sergio Albeverio, Philippe Blanchard, Ludwig Streit, 1987-04-23 This second BiBoS volume surveys recent developments in the theory of stochastic processes Particular attention is given to the interaction between mathematics and physics Main topics include statistical mechanics stochastic mechanics differential geometry stochastic processes quantum mechanics quantum field theory probability measures central limit theorems stochastic differential equations Dirichlet forms

**Stochastic Analysis and Mathematical Physics II** Rolando Rebolledo, 2012-12-06 The seminar on Stochastic Analysis and Mathematical Physics of the Catholic University of Chile started in Santiago in 1984 has been followed and enlarged since 1995 by a series of international workshops aimed at promoting a wide spectrum dialogue between experts on the fields of classical and quantum stochastic analysis mathematical physics and physics This volume collects most of the contributions to the Fourth International Workshop on Stochastic Analysis and Mathematical Physics whose Spanish abbreviation is ANESTOC in English STAMP held in Santiago Chile from January 5 to 11 2000 The workshop style stimulated a vivid exchange of ideas which finally led to a number of written contributions which I am glad to introduce here However

we are currently submitted to a sort of invasion of proceedings books and we do not want to increase our own shelves with a new one of the like On the other hand the editors of conference proceedings have to use different exhausting and compulsive strategies to persuade authors to write and provide texts in time a task which terrifies us As a result this volume is aimed at smoothly starting a new kind of publication What we would like to have is a collection of books organized like our seminar
