The Mathematical Theory of Communication Claude E Shannon, Warren Weaver, 1998-09-01 Scientific knowledge grows at a phenomenal pace but few books have had as lasting an impact or played as important a role in our modern world as *The Mathematical Theory of Communication* published originally as a paper on communication theory more than fifty years ago Republished in book form shortly thereafter it has since gone through four hardcover and sixteen paperback printings It is a revolutionary work astounding in its foresight and contemporaneity The University of Illinois Press is pleased and honored to issue this commemorative reprinting of a classic

Between Communication and Information Brent Ruben, 2017-09-29 The current popularity of such phrases as information age and information society suggests that links between information communication and behavior have become closer and more complex in a technology dominated culture Social scientists have adopted an integrated approach to these concepts opening up new theoretical perspectives on the media social psychology personal relationships group process international diplomacy and consumer behavior *Between Communication and Information* maps out a richly interdisciplinary approach to this development offering innovative research and advancing our understanding of integrative frameworks This fourth volume in the series reflects recently established lines of research as well as the continuing interest in basic areas of communications theory and practice In Part I contributors explore the junction between communication and information from various theoretical perspectives delving into the multilayered relationship between the two phenomena Cross disciplinary

approaches in the fields of etymology and library science are presented in the second section Part III brings together case studies that examine the interaction of information and communication at individual and group levels information exchanges between doctors and patients children and computers journalists and electronic news sources are analyzed in depth The concluding segment focuses on large social contexts in which the interaction of communication and information affects the evolution of institutions and culture Between Information and Communication both extends and challenges current thinking on the mutually supporting interplay of information and human behavior It will be of interest to sociologists media analysts and communication specialists

Recent Contributions to the Mathematical Theory of Communication Warren Weaver, 1949 **The Mathematical Theory of Information** Jan Kåhre, 2012-12-06 The general concept of information is here for the first time defined mathematically by adding one single axiom to the probability theory This Mathematical Theory of Information is explored in fourteen chapters 1 Information can be measured in different units in anything from bits to dollars We will here argue that any measure is acceptable if it does not violate the Law of Diminishing Information This law is supported by two independent arguments one derived from the Bar Hillel ideal receiver the other is based on Shannon's noisy channel The entropy in the classical information theory is one of the measures conforming to the Law of Diminishing Information but it has however properties such as being symmetric which makes it unsuitable for some applications The measure reliability is found to be a universal information measure 2 For discrete and finite signals the Law of Diminishing Information is defined mathematically using probability theory and matrix algebra 3 The Law of Diminishing Information is used as an axiom to derive essential properties of information Byron's law there is more information in a lie than in gibberish Preservation no information is lost in a reversible channel Etc The Mathematical Theory of Information supports colligation i.e. the property to bind facts together making two plus two greater than four Colligation is a must when the information carries knowledge or is a base for decisions In such cases reliability is always a useful information measure Entropy does not allow colligation

A Sociological Theory of Communication Loet Leydesdorff, 2001-01-01 Networks of communication evolve in terms of reflexive exchanges The codification of these reflections in language that is at the social level can be considered as the operating system of society Under sociologically specifiable conditions the discursive reconstructions can be expected to make the systems under reflection increasingly knowledge intensive This sociological theory of communication is founded in a tradition that includes Giddens' 1979 structuration theory Habermas' 1981 theory of communicative action and Luhmann's 1984 proposal to consider social systems as self-organizing The study also elaborates on Shannon's 1948 mathematical theory of communication for the formalization and operationalization of the non-linear dynamics The development of scientific communications can be studied using citation analysis The exchange media at the interfaces of knowledge production provide us with the evolutionary model of a Triple Helix of university industry government relations The construction of the European Information Society can then be analyzed in terms of interacting

networks of communication The issues of sustainable development and the expectation of social change are discussed in relation to the possibility of a general theory of communication REVIEW In this book Loet Leydesdorff sets out to answer the question Can society be considered as a self organizing autopoietic system In the process Leydesdorff develops a general sociological theory of communication as well as a special theory of scientific communication designed to analyze complex systems such as the European Information Society from review in JASIST 53 1 2002 62 63 The International Encyclopedia of Communication Theory and Philosophy, 4 Volume Set Klaus Bruhn Jensen, Robert T.
