Multi Criteria Decision Making

Bumho Son

College of Business Administration, CAU

Overview

- **Study of problems with several criteria, i.e., multiple criteria, instead of a single objective when making a decision**

- **Three techniques discussed: goal programming, the analytical hierarchy process and scoring models**

- **Goal programming**
  - Variation of linear programming considering more than one objective (goals) in the objective function

- **Analytical hierarchy process**
  - Develops a score for each decision alternative based on comparisons of each under different criteria reflecting the decision makers' preferences

- **Scoring models**
  - Based on a relatively simple weighted scoring technique

Mathematics For Decision Making 2vol:

Decision Making Process Denis Bouyssou,Didier Dubois,Henri Prade,Marc Pirlot,2013-05-10 This book provides an overview of the main methods and results in the formal study of the human decision making process as defined in a relatively wide sense A key aim of the approach contained here is to try to break down barriers between various disciplines encompassed by this field including psychology economics and computer science All these approaches have contributed to progress in this very important and much studied topic in the past but none have proved sufficient so far to define a complete understanding of the highly complex processes and outcomes This book provides the reader with state of the art coverage of the field essentially forming a roadmap to the field of decision analysis The first part of the book is devoted to basic concepts and techniques for representing and solving decision problems ranging from operational research to artificial intelligence Later chapters provide an extensive overview of the decision making process under conditions of risk and uncertainty Finally there are chapters covering various approaches to multi criteria decision making Each chapter is written by experts in the topic concerned and contains an extensive bibliography for further reading and reference   Decision Making with Imperfect Decision Makers Tatiana Valentine Guy,Miroslav Kárný,David H. Wolpert,2011-11-13 Prescriptive Bayesian decision making has reached a high level of maturity and is well supported algorithmically However experimental data shows that real decision makers choose such Bayes optimal decisions surprisingly infrequently often making decisions that are badly sub optimal So prevalent is such imperfect decision making that it should be accepted as an inherent feature of real decision makers living within interacting societies To date such societies have been investigated from an economic and gametheoretic perspective and even to a degree from a physics perspective However little research has been done from the perspective of computer science and associated disciplines like machine learning information theory and neuroscience This book is a major contribution to such research Some of the particular topics addressed include How should we formalise rational decision making of a single imperfect decision maker Does the answer change for a system of imperfect decision makers Can we extend existing prescriptive theories for perfect decision makers to make them useful for imperfect ones How can we exploit the relation of these problems to the control under varying and uncertain resources constraints as well as to the problem of the computational decision making What can we learn from natural engineered and social systems to help us address these issues   Intelligent Mathematics: Computational Analysis George A.
