## **Mathematics For Young Children An Active Thinking Approach:**

*Mathematics for Young Children* Marion H. Bird, 2022-11-21 For many years increasing stress has been placed on the importance of giving the under sevens a good start in mathematics Originally published in 1991 *Mathematics for Young Children* shows how children as young as four and five and of all abilities can be encouraged to carry out their own mathematical explorations whilst covering the content of a prescribed curriculum A substantial part of the book is taken up with actual case studies of children working with Marion Bird in a reception classroom fully illustrated with examples of the children's work These case studies are then analysed to show how a prescribed syllabus can be effectively covered through an investigational approach a point which is of paramount importance to teachers concerned with the introduction of the National Curriculum The role of the teacher too is examined carefully in order to identify those parts of a teacher's repertoire which seems to be particularly fruitful in encouraging young children's active mathematical thinking Throughout readers are encouraged to apply and amend ideas to suit their own particular circumstances *Playful Mathematics* Helen J. Williams, 2022-03-10 Nursery World Professional Book of the Year 2022 Children are naturally mathematical in their play They play with mathematics Early years practitioners often struggle to make mathematics relevant and engaging for their young learners In their play children are naturally mathematical yet practitioners are often unsure about how to build on this or how this observed play fits in with the mathematics they teach This Nursery World Award Winning Book Empowers early years teachers to see the learning in this play and to remain committed to play based practice Outlines recent research on how children best learn mathematics Supports early years practitioners to know why preparation works better than planning and why thinking space matters more than you think *MiniMaths 2* Kim Connor, 2000 *MiniMaths* is packed with oodles of maths ideas inspired by everyday objects like shoes dough flowers and sand Each book contains over 72 engaging maths activities *Mathematics in Nursery Education, Second Edition* Ann Montague-Smith, 2014-05-22 This Second Edition covers the mathematics needed to teach the Early Learning Goals It has been up dated to include new research findings as well as new topics for example using number lines with young children The topics of counting number including early addition and subtraction pattern measures and shape and space are covered in detail Each chapter contains suggestions for key questions to ask in order to encourage children to discuss their mathematics and to demonstrate what they know and understand There are sections on developing problem solving skills working with parents and other adults in the nursery setting as well as detailed charts giving ideas for activities and how to assess learning and some activities planned in full The final chapter gives detailed help with planning and assessment of mathematics The book is intended for anyone working with children in the early years teachers nursery nurses classroom assistants playgroup leaders and workers child minders and day care staff It is particularly suitable as a course text for those training to be teachers either through the undergraduate route or through a PGCE and for those studying for early childhood degrees or diplomas **Supporting Children's**

**Learning in the Early Years** Linda Miller, Jane Devereux, Carrie Cable, Gill Goodliff, 2014-12-05 Supporting Children's Learning in the Early Years is aimed at early years practitioners who are developing their knowledge and understanding of professional practice through studying at undergraduate level. The book encourages readers to consider their professional development as reflective practitioners building on and supporting the government agenda to provide quality provision for young children and their families. Combining theory and practice and bringing together current research and thinking in a broad range of areas the book covers Learning environments young children as learners assessment of learning well being and children's rights diversity and inclusion Learning and development children's development including social and emotional development literacy and mathematical development the potential of ICT fostering creativity musical development and knowledge and understanding of the world Reflective practice the learning environment safeguarding and wellbeing the reflective practitioner Throughout the contributions in this book encourage the reader to consider the diverse range of experiences which young children bring to early years and early primary settings and suggest ways in which they can be supported The book will also be a valuable and unique resource for training providers of a range of courses at further and higher education level that prepare people to work with and lead in early years settings in the UK

**Mathematics in the Early Years** David Clemson, 2006-11-22 The Clemsons' clear and readable book takes the reader from debates about how children learn and what children know and can do when they start school through to a discussion of how mathematics can be managed assessed and evaluated in the school and classroom Linking these two parts of the book is a section on the subject of mathematics itself from which the non specialist reader can gain a view of what mathematics is what needs to be thought about in planning and offering a curriculum and the special dilemmas faced in teaching and learning mathematics as a subject A bank of case studies offers an opportunity to see mathematics in action in a variety of classrooms

**Education in Early Childhood** Sue Robson, 2012-11-12 This work designed to be used as a basic textbook for student teachers taking B Ed and PGCE initial training courses provides an accessible but rigorous treatment of early childhood education integrating ideas and practice acts as a springboard for students further study arose out of the concerns and needs expressed by students themselves and has been written from a well known centre for early childhood studies Practitioner examples are included throughout together with selected readings

**Supporting Early Mathematical Development** Caroline McGrath, 2010-07-12 Supporting Early Mathematical Development is an essential text for current Early Years practitioners and students offering an excellent blend of theory and practice that will enable you to provide successful mathematical education for children from birth to eight years old Charting the delivery of mathematical development in Playgroups Children's Centres Nurseries and Primary Schools it forges links between current practice and fundamental Early Years principles and makes suggestions for creating effective pedagogies in maths teaching Promoting mathematical development through play based learning this book presents a wealth of practical multi sensory teaching strategies instructional

methodologies activity ideas incorporating play books songs cookery and the outdoors examples of children s work advice on translating theory into practice questions for reflective practice Throughout the book Caroline McGrath breaks down the complexity of teaching and learning mathematics into simple steps and guides readers through possible gaps in their knowledge bringing fresh enthusiasm to teaching mathematics This is an invaluable resource for practitioners and trainee teachers wishing to strengthen their mathematical teaching and professional practice or for students on a wide range of Early Years courses

*Children's Mathematical Thinking in Primary Years* Julia Anghileri,2005-05-01 This popular Continuum series intended chiefly for teachers and trainee teachers places strong emphasis on practice but at the same time incorporates the latest research in the field The book demonstrates a strong belief in the ability of children to learn and in the ability of teachers to increase children s learning potential The series authors are distinguished practitioners in their fields who write with authority but without jargon With the increasingly popular constructivist framework for learning teachers are coming to recognize the limitations of taught procedures and to find ways to encourage children to generate their own knowledge and understanding in mathematics The challenge for teachers is to promote an environment that encourages mathematical thinking in which pupils of all abilities are able to achieve their full potential This text brings together experiences of teachers and researchers who examine the ways children work mathematically in order to provide an enhanced learning environment within the classroom It also addresses key issues in current maths teaching
