directly via new technologies and also by using technology to capture important interactions between mathematicians and the literature for later sharing and reuse Developing a 21st Century Global Library for Mathematics Research discusses how information about what the mathematical literature contains can be formalized and made easier to express encode and explore Many of the tools necessary to make this information system a reality will require much more than indexing and will instead depend on community input paired with machine learning where mathematicians expertise can fill the gaps of automatization This report proposes the establishment of an organization the development of a set of platforms tools and services the deployment of an ongoing applied research program to complement the development work and the mobilization and coordination of the mathematical community to take the first steps toward these capabilities The report recommends building on the extensive work done by many dedicated individuals under the rubric of the World Digital Mathematical Library as well as many other community initiatives Developing a 21st Century Global Library for Mathematics envisions a combination of machine learning methods and community based editorial effort that makes a significantly greater portion of the information and knowledge in the global mathematical corpus available to researchers as linked open data through a central organizational entity referred to in the report as the Digital Mathematics Library This report describes how such a library might operate discussing development and research needs role in facilitating discover and interaction and establishing partnerships with publishers   *Deep Natural Language Processing and AI Applications for Industry 5.0* Tanwar, Poonam,Saxena, Arti,Priya, C.,2021-06-25 To sustain and stay at the top of the market and give absolute comfort to the consumers industries are using different strategies and technologies Natural language processing NLP is a technology widely penetrating the market irrespective of the industry and domains It is extensively applied in businesses today and it is the buzzword in every engineer s life NLP can be implemented in all those areas where artificial intelligence is applicable either by simplifying the communication process or by refining and analyzing information Neural machine translation has improved the imitation of professional translations over the years When applied in neural machine translation NLP helps educate neural machine networks This can be used by industries to translate low impact content including emails regulatory texts etc Such machine translation tools speed up communication with partners while enriching other business interactions Deep Natural Language Processing and AI Applications for Industry 5 0 provides innovative research on the latest findings ideas and applications in fields of interest that fall under the scope of NLP including computational linguistics deep NLP web analysis sentiments analysis for business and industry perspective This book covers a wide range of topics such as deep learning deepfakes text mining blockchain technology and more making it a crucial text for anyone interested in NLP and artificial intelligence including academicians researchers professionals industry experts business analysts data scientists data analysts healthcare system designers intelligent system designers practitioners and students   **XV Mediterranean Conference on Medical and Biological Engineering and Computing – MEDICON 2019** Jorge Henriques,Nuno
